

## Dirichlet Eta Function - Negative Integer Formula - Isaac Mor

Email: isaac.mor@hotmail.com

Many people are using the term “Assigned Value” or “Analytic Continuation” for divergent series  
But this explanation is so lacking and can be replaced with a much easier and simpler term of explanation

For me (as I see it) when I am looking at the zeta function I don't see (or use) the term “Assigned Value” or “Analytic Continuation”  
Instead I see “spirals” all around the grid

The simplest way is first to look at the part of  $s > 1$  on the Complex plane  $\zeta(x + iy) = a + ib$  and the behavior of convergent points  
The spiral swirls around inwards to a unique point which the series Converges - Same goes for the other way around!

When I look at the part of  $s < 1$  on the Complex plane  $\zeta(x + iy) = a + ib$  and the behavior of divergent points  
The spiral swirls around outwards but if you look closely you will notice that the spiral has a “center point” or an “origin”  
and that “origin” is the “Assigned Value” everyone is talking about

when I first started to read about the zeta function I didn't know what are those “Assigned Values” or “Analytic Continuation” and how and why people are trying to give a value for divergent series? And why that specific value and not something else? I wanted an explanation that is more than “because the formula says so” and without going deeper into all the “Analytic Continuation” stuff.

Those “origin points” did the trick!

If you are assigning a value for a series that decreases to a specific value (case #1)  
Then you can assign a value for a series that increases from a specific value (case #2)

Other than those two cases there is one more

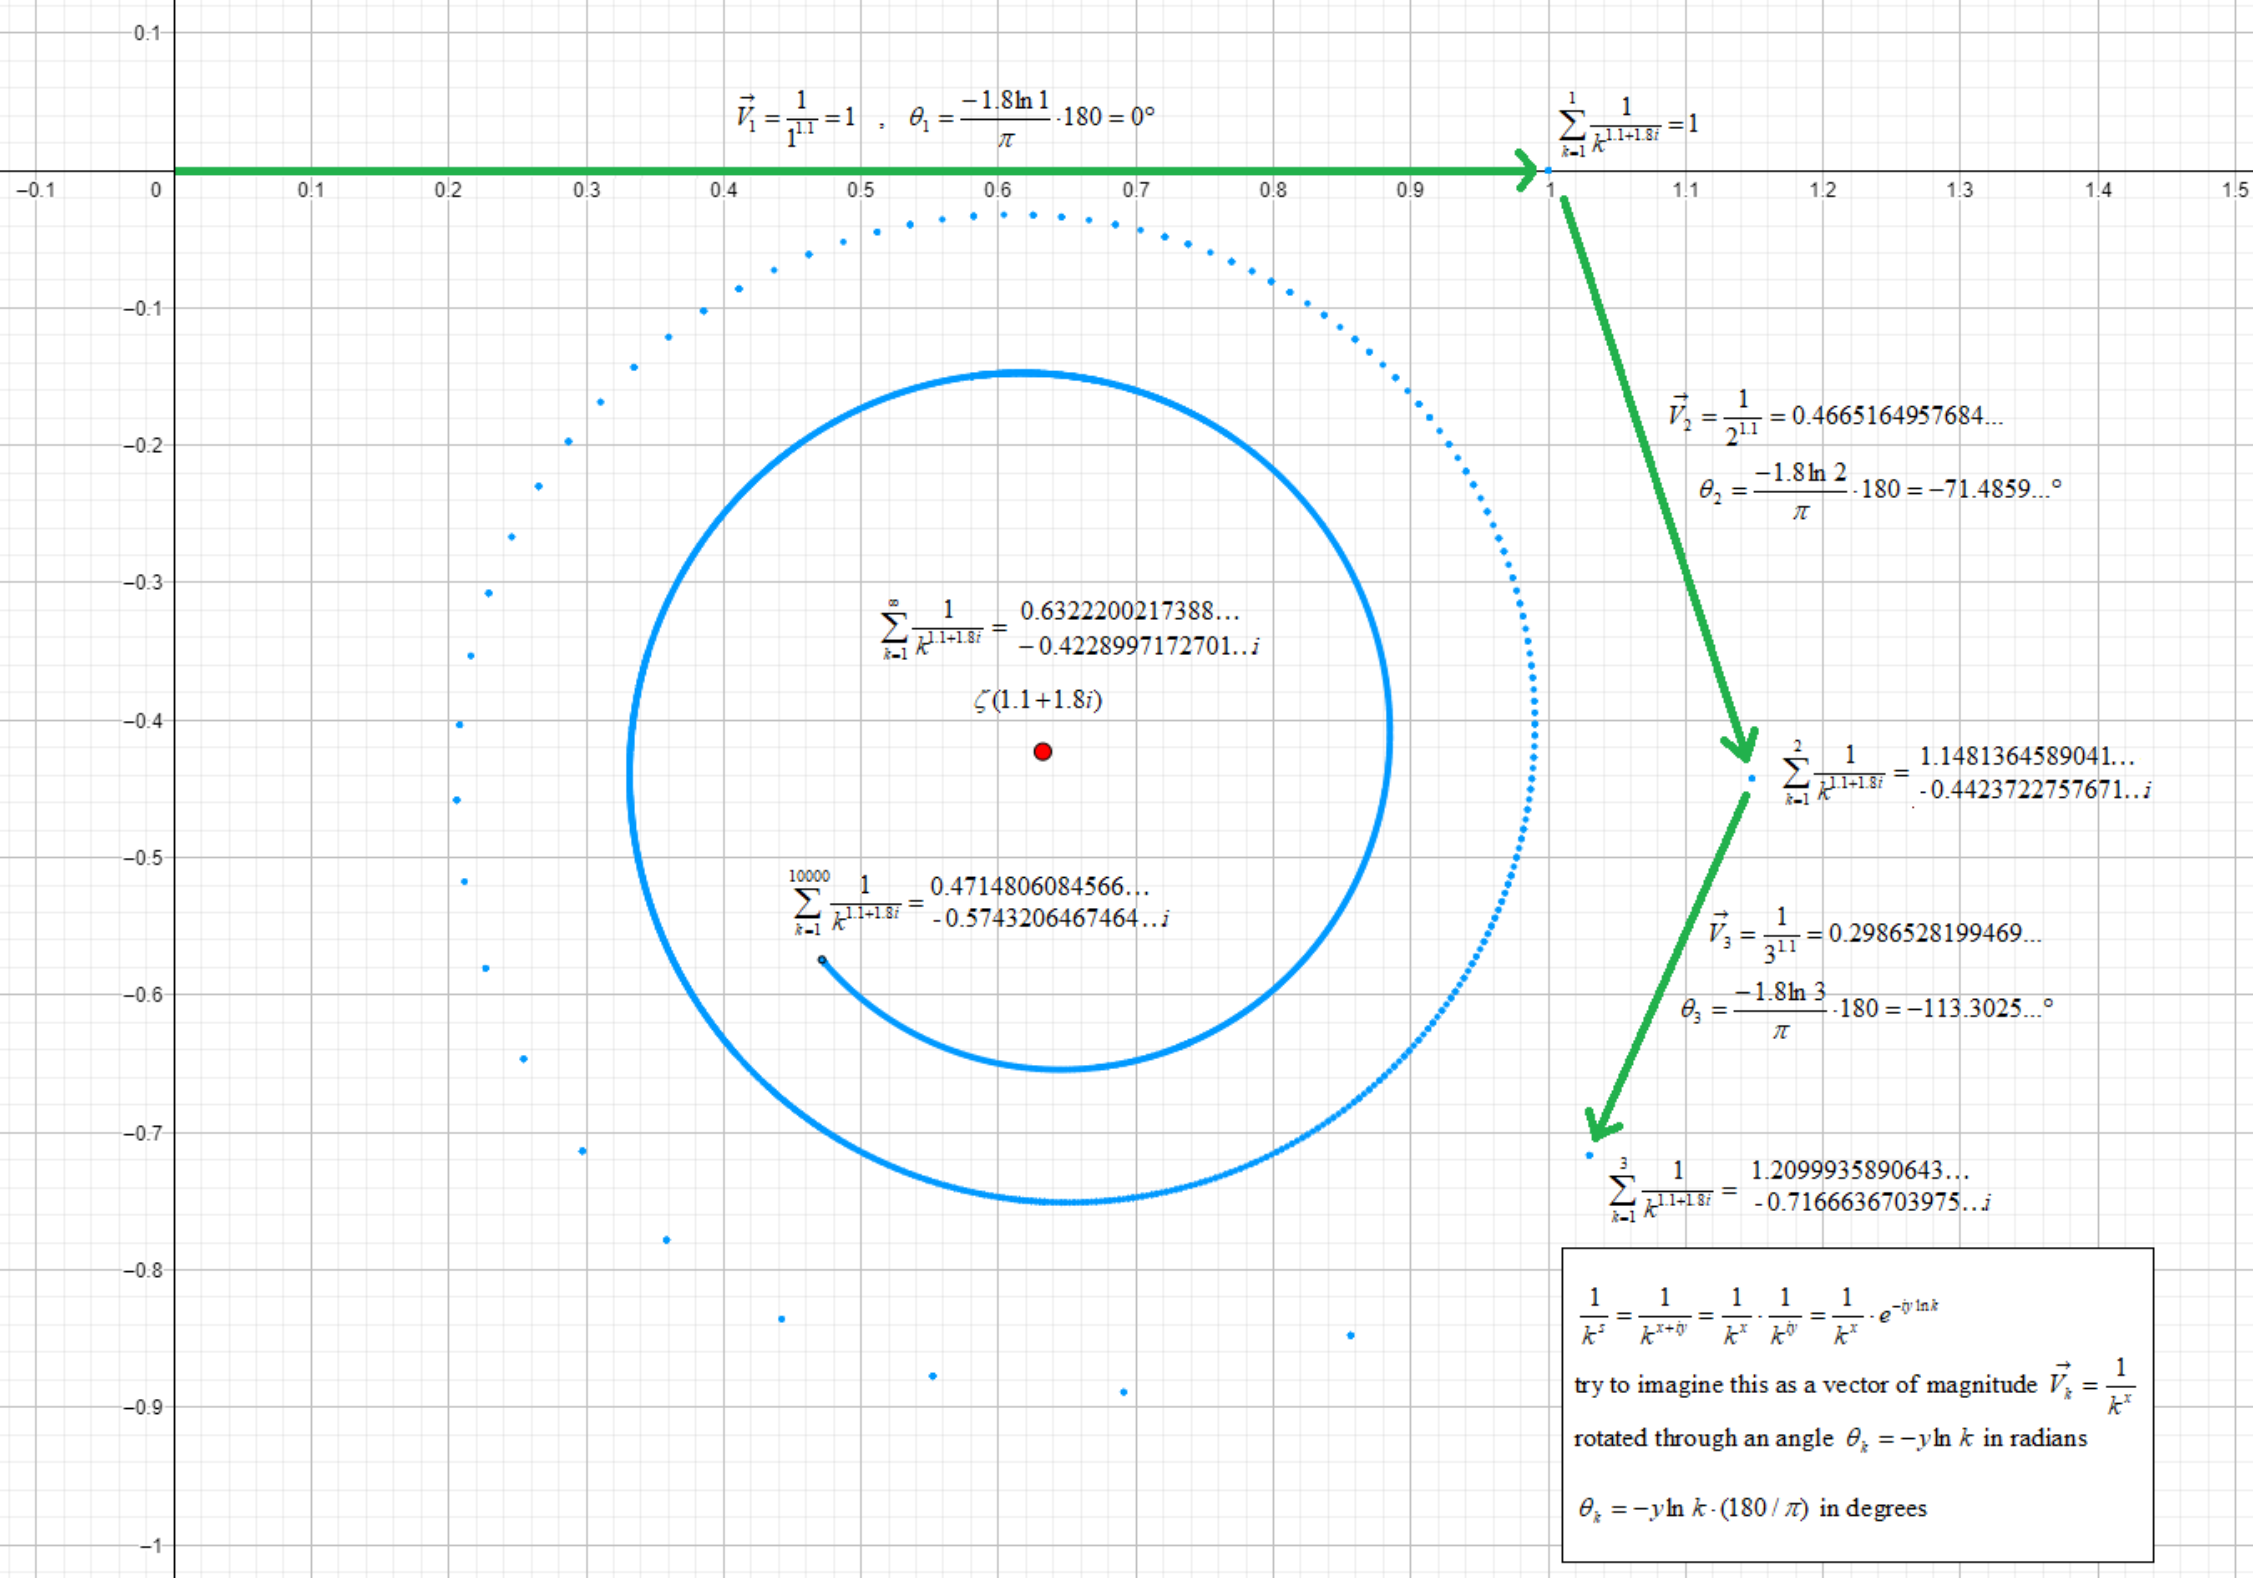

This is when the spiral at some point starts to spin around a specific value with a “fixed radius”  
those cases appear at the zeta function  $\zeta(x + iy) = a + ib$  when  $x = 1$  and the radius will be  $1/y$   
meaning that this is a divergent series with a “fixed radius”

I am not going to get into all the zeta function stuff!  
This was a small intro for the eta function spirals

It's true that the zeta function spirals have 3 cases but they are all spirals with one arm  
Now at the eta function the spirals have two arms (that is because of the +/- swapping) with the same 3 cases

Btw the “fixed radius” appears at the eta function  $\eta(x + iy) = a + ib$  when  $x = 0$

$$\eta(k) = 1^n - 2^n + 3^n - 4^n + \dots \pm k^n$$

All the intersect points of x where  $f(x) = g(x)$  will be on one line  
because the two functions are a mirror image of the same function parallel to the yAxis  
This Fixed value of y (the line of the Intersect points) will be the “assigned value” of the eta function

let's just rearrange the coefficients

Order	$f(x)$ Positive part of the eta function	$g(x)$ Negative part of the eta function	
0	1	0	$+\frac{1}{2}$
1	$\frac{1}{2}x^1 + \frac{1}{2}$	$-\left(\frac{1}{2}x^1\right)$	$+\frac{1}{4}$

$$f(x) = r_0 \binom{n}{0} x^n + r_1 \binom{n}{1} x^{n-1} + r_2 \binom{n}{2} x^{n-2} + r_3 \binom{n}{3} x^{n-3} + \dots + r_n \binom{n}{n} x^{n-n} + r_n$$

$r_k$  seems to be the assigned value of the eta function! Why? Because...

we will use  $x = 1$  to find the next value and  $f(1) = 1$

$$f(1) = r_0 \binom{0}{0} + r_0 = 1$$

$$2r_0 = 1$$

$$2r_1 = 1 - r_0 \binom{1}{0}$$

$$2r_2 = 1 - r_0 \binom{2}{0} - r_1 \binom{2}{1}$$

$$2r_3 = 1 - r_0 \binom{3}{0} - r_1 \binom{3}{1} - r_2 \binom{3}{2}$$

$$2r_4 = 1 - r_0 \binom{4}{0} - r_1 \binom{4}{1} - r_2 \binom{4}{2} - r_3 \binom{4}{3}$$

$$2r_5 = 1 - r_0 \binom{5}{0} - r_1 \binom{5}{1} - r_2 \binom{5}{2} - r_3 \binom{5}{3} - r_4 \binom{5}{4}$$

$$2r_6 = 1 - r_0 \binom{6}{0} - r_1 \binom{6}{1} - r_2 \binom{6}{2} - r_3 \binom{6}{3} - r_4 \binom{6}{4} - r_5 \binom{6}{5}$$

$$2r_7 = 1 - r_0 \binom{7}{0} - r_1 \binom{7}{1} - r_2 \binom{7}{2} - r_3 \binom{7}{3} - r_4 \binom{7}{4} - r_5 \binom{7}{5} - r_6 \binom{7}{6}$$

$$2r_8 = 1 - r_0 \binom{8}{0} - r_1 \binom{8}{1} - r_2 \binom{8}{2} - r_3 \binom{8}{3} - r_4 \binom{8}{4} - r_5 \binom{8}{5} - r_6 \binom{8}{6} - r_7 \binom{8}{7}$$

$$2r_9 = 1 - r_0 \binom{9}{0} - r_1 \binom{9}{1} - r_2 \binom{9}{2} - r_3 \binom{9}{3} - r_4 \binom{9}{4} - r_5 \binom{9}{5} - r_6 \binom{9}{6} - r_7 \binom{9}{7} - r_8 \binom{9}{8}$$

$$2r_k = 1 - r_0 \binom{k}{0} - r_1 \binom{k}{1} - r_2 \binom{k}{2} - r_3 \binom{k}{3} - r_4 \binom{k}{4} - \dots - r_{k-1} \binom{k}{k-1}$$

Self check :)
