Abstract

This book discusses the special case of Beta distribution as $\alpha = \lambda + 1$ and $\beta = 2 - \lambda$. To compare with the continuous Bernoulli distribution, the change of λ affected the pdf of the special Beta distribution. Then find out the sufficient statistic, the point estimator, the confidence interval, the test statistic, and the goodness of fit. The special Beta distribution at the case of $\lambda = 0.5$ is different from the continuous Bernoulli distribution. The special Beta distribution pdf is changed in smoothing but the Continuous Bernoulli distribution pdf has a big wave when λ is from small to large. As the sample size becomes large, two distributions are approximated to Normal distribution with different relationships between λ and the sum of samples.

Chapter 1. Special case of beta distribution

This probability density function is a special case of beta distribution, that is
 $X \sim Beta(\alpha = \lambda + 1, \beta = 2 - \lambda)$,

$$f_x(x; \lambda) = \frac{2}{\Gamma(\lambda+1)\Gamma(2-\lambda)} x^\lambda (1-x)^{1-\lambda}, 0 \leq x \leq 1, 0 < \lambda < 1$$

The random variable could be a set of probability which will follow the character of this distribution. The idea of this probability distribution is from the Continuous Bernoulli distribution. This book is about the probability distribution and the test statistic of λ .

Section1, The probability density function

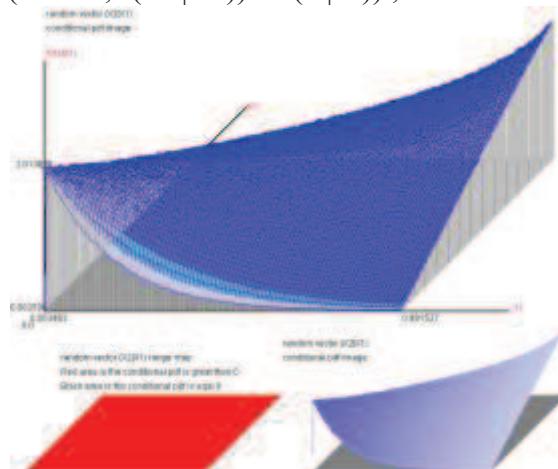

$$f_x(x; \lambda) = \frac{2}{\Gamma(\lambda+1)\Gamma(2-\lambda)} x^\lambda (1-x)^{1-\lambda}, 0 \leq x \leq 1, 0 < \lambda < 1,$$

$F_x(x; \lambda) = \int_0^x \frac{2}{\Gamma(\lambda+1)\Gamma(2-\lambda)} x^\lambda (1-x)^{1-\lambda} dx$ is the cumulative distribution function.

$$E(X) = \frac{\lambda+1}{3}, Var(X) = \frac{(\lambda+1)(2-\lambda)}{36}, \lambda \text{ is the shape parameter,}$$

$$E(X^k) = \frac{2}{\Gamma(\lambda+1)} \frac{\Gamma(\lambda+k+1)}{\Gamma(3+k)}, k > 0.$$

The diagram of $(X_1 = \lambda, f(X_2 | X_1)) = f(X | \lambda))$,

$$\text{When } \lambda = 0.5, f_x(x; \lambda) = \frac{8}{\pi} \sqrt{x(1-x)} = \frac{8}{\pi} \sqrt{0.25 - (x-0.5)^2}, 0 \leq x \leq 1,$$

the semi-circle distribution, $R = 0.5, \mu = 0.5$.

The simulator is the database which from numerical analysis.

$$f_i = f_x(x_i + \Delta x; \lambda) \times \Delta x, \Delta x \rightarrow 0, x_i = 0, \frac{1}{k}, \frac{2}{k}, \dots, 1 - \frac{1}{k}, k \rightarrow \infty, F_x(x_i; \lambda) \approx \frac{\sum_{i=1}^{x_i} f_i}{\sum_{i=1}^k f_i},$$

$$F_x(x_i; \lambda) = \text{Random number} \sim Uniform(0,1).$$

Chapter 2. The sufficient statistic and the pointer estimator of parameter

Section 1, The likelihood function

Let $X_1, X_2, \dots, X_n \stackrel{iid}{\sim} Beta(\alpha = \lambda + 1, \beta = 2 - \lambda)$,

$$f_{X_i}(x_i; \lambda) = \frac{2}{\Gamma(\lambda+1)\Gamma(2-\lambda)} x_i^\lambda (1-x_i)^{1-\lambda}, 0 \leq x_i \leq 1, 0 < \lambda < 1,$$

The likelihood function is

$$\begin{aligned} f(x_1, x_2, \dots, x_n; \lambda) &= \prod_{i=1}^n f_{X_i}(x_i; \lambda) = \left(\frac{2}{\Gamma(\lambda+1)\Gamma(2-\lambda)} \right)^n \left(\prod_{i=1}^n x_i^\lambda \right) \left(\prod_{i=1}^n (1-x_i) \right)^{1-\lambda} \\ &= \left(\frac{2}{\Gamma(\lambda+1)\Gamma(2-\lambda)} \right)^n \exp \left(\lambda \sum_{i=1}^n \ln(x_i) \right) \exp \left((1-\lambda) \sum_{i=1}^n \ln(1-x_i) \right) \\ &= \left(\frac{2}{\Gamma(\lambda+1)\Gamma(2-\lambda)} \right)^n \exp \left(\lambda \sum_{i=1}^n \ln \left(\frac{x_i}{1-x_i} \right) \right) \exp \left(\sum_{i=1}^n \ln(1-x_i) \right) \end{aligned}$$

Section 2, The sufficient statistic of λ

The sufficient statistic of λ cannot be found from the likelihood function.

$$f_X(x; \lambda) = \frac{2}{\Gamma(\lambda+1)\Gamma(2-\lambda)} \left(\frac{x}{1-x} \right)^\lambda (1-x), 0 \leq x \leq 1, 0 < \lambda < 1,$$

$$Y = \frac{X}{1-X}, Y - YX = X, X = \frac{Y}{1+Y}, 1 - X = \frac{1}{1+Y}, 0 < y < \infty,$$

$$\frac{dx}{dy} = \frac{1}{1+y} - \frac{y}{(1+y)^2} = \frac{1}{(1+y)^2}$$

$$f_Y(y; \lambda) = f_X \left(x = \frac{y}{1+y}; \lambda \right) \times \left| \frac{dx}{dy} \right| = \frac{2}{\Gamma(\lambda+1)\Gamma(2-\lambda)} y^\lambda \frac{1}{(1+y)^3},$$

$$W = \ln(Y) = \ln \left(\frac{X}{1-X} \right), -\infty < w < \infty, \frac{dy}{dw} = \exp(w),$$

$$f_W(w; \lambda) = f_Y \left(y = \exp(w); \lambda \right) \left| \frac{dy}{dw} \right| = \frac{2}{\Gamma(\lambda+1)\Gamma(2-\lambda)} \exp(\lambda w) \frac{\exp(w)}{(1+\exp(w))^3},$$

The sufficient statistic of λ .

$$\begin{aligned}
& X_1, X_2, \dots, X_n \stackrel{iid}{\sim} Beta(\alpha = \lambda + 1, \beta = 2 - \lambda), \\
& T = \sum_{i=1}^n \ln\left(\frac{X_i}{1-X_i}\right) = \sum_{i=1}^n W_i, W_i = \ln\left(\frac{X_i}{1-X_i}\right), i = 1, 2, \dots, n, \\
& f(w_1, w_2, \dots, w_n) = \left(\frac{2}{\Gamma(\lambda+1)\Gamma(2-\lambda)}\right)^n \exp\left(\lambda \sum_{i=1}^n w_i\right) \prod_{i=1}^n \left(\frac{\exp(w_i)}{(1+\exp(w_i))^3}\right), \\
& f\left(w_1, w_2, \dots, w_n \middle| T = \sum_{i=1}^n W_i = t\right) = \frac{f\left(w_1, w_2, \dots, w_n = t - \sum_{i=1}^{n-1} w_i\right)}{f_T(t)} \\
& = \frac{\prod_{i=1}^n \left(\frac{\exp(w_i)}{(1+\exp(w_i))^3}\right)}{\int_{-\infty}^{\infty} \dots \int_{-\infty}^{\infty} \prod_{i=1}^{n-1} \left(\frac{\exp(w_i)}{(1+\exp(w_i))^3}\right) \times \frac{\exp\left(t - \sum_{i=1}^{n-1} w_i\right)}{\left(1 + \exp t - \sum_{i=1}^{n-1} w_i\right)^3} dw_1 \dots dw_{n-1}}, \\
& f_T(t) = \int_{-\infty}^{\infty} \dots \int_{-\infty}^{\infty} f\left(w_1, w_2, \dots, w_n = t - \sum_{i=1}^{n-1} w_i\right) dw_1 \dots dw_{n-1} \\
& = \int_{-\infty}^{\infty} \dots \int_{-\infty}^{\infty} \left(\frac{2}{\Gamma(\lambda+1)\Gamma(2-\lambda)}\right)^n \exp(\lambda t) K\left(w_1, w_2, \dots, w_n = t - \sum_{i=1}^{n-1} w_i\right) dw_1 \dots dw_{n-1} \\
& K\left(w_1, w_2, \dots, w_n = t - \sum_{i=1}^{n-1} w_i\right) = \prod_{i=1}^{n-1} \left(\frac{\exp(w_i)}{(1+\exp(w_i))^3}\right) \times \frac{\exp\left(t - \sum_{i=1}^{n-1} w_i\right)}{\left(1 + \exp t - \sum_{i=1}^{n-1} w_i\right)^3},
\end{aligned}$$

$f\left(w_1, w_2, \dots, w_n \middle| T = \sum_{i=1}^n W_i = t\right)$ is independent with λ .

The sufficient of λ is not existed, because $\sum_{i=1}^n \ln\left(\frac{X_i}{1-X_i}\right) = \sum_{i=1}^n W_i$, but the range is $(-\infty, \infty)$.

Section 3, The point estimator of λ

Let $X_1, X_2, \dots, X_n \stackrel{iid}{\sim} Beta(\alpha = \lambda + 1, \beta = 2 - \lambda)$.

(1) UMVU(Uniformly Minimum Variance Unbiased)

The sufficient statistic of λ is not existed, the UMVUE of λ cannot be found.

(2) MLE

$$\begin{aligned} f(x_1, x_2, \dots, x_n; \lambda) &= \left(\frac{2}{\Gamma(\lambda+1)\Gamma(2-\lambda)} \right)^n \exp\left(\lambda \sum_{i=1}^n \ln\left(\frac{x_i}{1-x_i} \right) \right) \exp\left(\sum_{i=1}^n \ln(1-x_i) \right) \\ &= L(\lambda | x_1, x_2, \dots, x_n), \\ \ln L(\lambda | x_1, x_2, \dots, x_n) &= n \ln 2 - n \ln(\Gamma(\lambda+1)\Gamma(2-\lambda)) + \lambda \sum_{i=1}^n \ln\left(\frac{x_i}{1-x_i} \right) + \sum_{i=1}^n \ln(1-x_i) \\ \frac{d \ln L(\lambda | x_1, x_2, \dots, x_n)}{d \lambda} &= \frac{n \left(\frac{d \Gamma(\lambda+1)\Gamma(2-\lambda)}{d \lambda} \right)}{\Gamma(\lambda+1)\Gamma(2-\lambda)} + \sum_{i=1}^n \ln\left(\frac{x_i}{1-x_i} \right) = 0, \\ \frac{d \Gamma(\lambda+1)\Gamma(2-\lambda)}{d \lambda} &= H(\lambda) = -\frac{\sum_{i=1}^n \ln\left(\frac{x_i}{1-x_i} \right)}{n}, \hat{\lambda} = H^{-1} \left(-\frac{\sum_{i=1}^n \ln\left(\frac{x_i}{1-x_i} \right)}{n} \right), \end{aligned}$$

$H(\lambda)$ is unkown, MLE of λ is not existed.

(3) MME

$$\begin{aligned} E(X) &= \frac{\lambda+1}{3}, \bar{X} = \frac{\sum_{i=1}^n X_i}{n} = \frac{\sum_{i=1}^n X_i}{n} = \frac{\hat{\lambda}+1}{3}, \hat{\lambda} = 3 \times \bar{X} - 1, \\ E(\hat{\lambda}) &= \lambda, \text{Var}(\hat{\lambda}) = \frac{9(\lambda+1)(2-\lambda)}{36n}, \end{aligned}$$

Chapter 3. The sampling distribution about sample mean

This chapter is about the sampling distribution of $\sum_{i=1}^n X_i$, $\frac{\sqrt{n}(\bar{X} - \mu)}{\sigma}$ and $\frac{\sqrt{n}(\bar{X} - \mu)}{S}$.

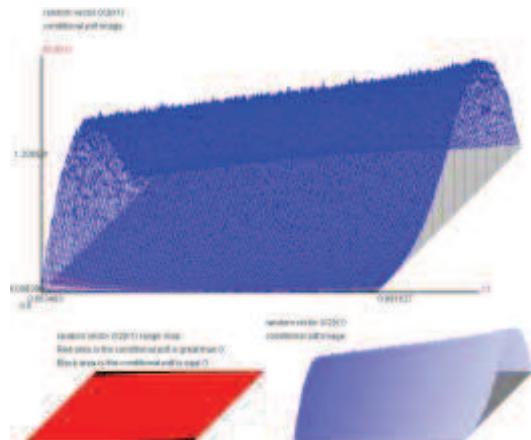

Let $X_1, X_2, \dots, X_n \stackrel{iid}{\sim} Beta(\alpha = \lambda + 1, \beta = 2 - \lambda)$, with $\mu = \frac{\lambda + 1}{3}$, $\sigma^2 = \frac{(\lambda + 1)(2 - \lambda)}{36}$.
