

# THE NEW LORENTZ'S TRANSFORMATIONS

<http://teoraconectada.scoom.com/>

The new “Lorentz’s Transformations” are the new relational transformations:  
Direct transformations  $A \rightarrow B$  for  $C$  :

$$dt_{CB} = \frac{1}{1 - \frac{v_{BA}v_{CA}}{c^2}} \left( dt_{CA} - \frac{v_{BA}}{c^2} dx_{CA} \right)$$

$$dx_{CB} = \frac{1}{1 - \frac{v_{BA}v_{CA}}{c^2}} (dx_{CA} - v_{BA} dt_{CA})$$

$$dy_{CB} = \frac{\sqrt{1 - \frac{v_{BA}^2}{c^2}}}{1 - \frac{v_{BA}v_{CA}}{c^2}} dy_{CA}$$

$$dz_{CB} = \frac{\sqrt{1 - \frac{v_{BA}^2}{c^2}}}{1 - \frac{v_{BA}v_{CA}}{c^2}} dz_{CA}$$

Relational local metric associated:

$$g_{CA} = \begin{pmatrix} -k_{CA} & & & \\ & k_{CA} & & \\ & & k_{CA} & \\ & & & k_{CA} \end{pmatrix}$$

where  $k_{CA}$  :

$$k_{CA} = \frac{1}{1 - \frac{v_{CA}^2}{c^2}}$$
