

A NEW MODEL OF THE ATOM

Yibing Qiu
yibing.qiu@hotmail.com

Abstract: put forward a new structure model of atoms

Main viewpoints & conclusions:

1. Inside an atom, there are no any forms of classical mechanical movement.
2. There are no any forms of electronic orbits; electronic orbiting around the nucleus in a circular motion does not exist.
3. Concentric spherical layer model
The extranuclear charges (electrons) existence and completely full in the space outside the nucleus of the atom at a kind of soft matter form, through the mutual electromagnetic interaction with the nucleus, Formed: the nucleus is the sphere center; different volume charge density; energy levels discrete (energy levels quantized); higher to lower from the inner to the outer; concentric spherical multilayer layer-shaped volume charge density and energy levels distribution structure and morphology.
