The Impossible Zero Point Electric Black Hole:

Leo Vuyk,
Architect,
the Netherlands.

Abstract.

Recent turmoil around the foundation of Black hole theory principles by Stephen Hawking and others, is a clear sign of great uncertainty about black holes and adjacent subjects. As a consequence, it seems a good moment to come up with a Black Hole alternative already prepacked in my Quantum FFF Theory (Function Follows Form).

Quantum FFF (Function Follows Form) theory states, that the vacuum is seeded with fast opposite oscillating massless 3-Dimensional torus shaped Preons, responsible for pair production. Two Preons are able to change form into two entangled Fermion propeller strings by an overflow of energetic opposite collision. This energy overflow is supposed to be present at the black hole event horizon (fig 5).

Thus the FORM of all particles is based on real joints and gears, responsible for the FUNCTION even for composite Quarks and Photons, however all particles are instant entangled and guided in a dual mirror multiversal way.

That dual oscillating Higgs particles are the same as Preons and are responsible for the Casimir Dark Energy of 126 GeV recently observed in the LHC at CERN.

That the oscillating Higgs vacuum system is the messenger medium of all Photon information and Black Holes are equipped with a nucleus of compacted Higgs particles, compressed by the oscillating Higgs vacuum.

The vacuum energy flow around such a Black hole indicates that different sized globular horizons are needed, an event or Photon horizon and two Fermion repulsion horizons, which can explain lots of astronomical unresolved phenomena.

Introduction.
In Quantum FFF theory it is assumed that there are four kinds of dark matter black holes, 
1: The Big Bang – or Big Crunch Black Hole, the origin of the cyclic multiverse.( ref. 42,35,33,26,23,)
2: Primordial Big Bang splitting Black Holes as the product of the exploding Big Bang black hole, identified as a pairing an splitting process of Galaxy Anchor Black Holes ( GABHs, ref. 33),
3: Supernova Black Holes identified as and after a pairing and splitting process as Herbig Haro hotspots as the origin of Stellar Anchor Black Holes (SABHs, ref. 10).
4: Electro Magnetic Interference Black Holes, described as the origin of so called Quantum Knots found in the lab.(ref, 27,22,14,11.) , Ball Lightning, Earth bound Micro Comets, Solar related Comets and Sunspots.

All Black Holes are equipped with at least three horizons (fig 5):
1: A 3 dimensional globular massless quantum black hole nucleus, surrounded by a globular event horizon, (7, fig 5) This is the globular shell where maximum opposing photon energy (also vacuum energy) is concentrated
A Fermion repulsion zone located in between two horizons:
2: A fermion attraction/repulsion horizon with entangled pair production (partly annihilated) creating plasma,
3: A fermion repulsion/attraction boundary (by fermion spin flip, ref. 14) with zero point electric plasma polarization of electrons pushed outside and protons pushed at the inside. This is supposed to be the base for all Birkeland/ Alfven current circuits in space.(fig 10, ref 28,22.)

Quantum FFF theory.

Quantum FFF ( Function Follows Form) theory states, that the vacuum is seeded with fast oscillating massless dual Higgs particles (the origin of dark energy) , oscillating along a complex chiral tetrahedral vacuum lattice, which has the ability to transfer Photon and Graviton FORM information in bunches of linear but chiral oscillations, through the chiral (helix shaped) vacuum lattice with the local speed of light.
The local speed of light is created around massive objects which seem to be able to “drag:” the Higgs vacuum oscillations into an anti-symmetrical action called “LASOF” or Local Anti Symmetrical Oscillating vacuum Frame.
There are no attraction forces in Q-FFF theory. Gravity seems to be the result of two different impulse vector arrays: the massless Higgs impulse array and the (less effective) massless Graviton impulse array, which is supposed to be based on the same massless Higgs particle transporting the “FORM information energy” of the Graviton.

As a consequence, new paradigm Dark Matter Black holes suffer only from the gravitational influence of Higgs vacuum (photon) impulses also coined Casimir push-gravity, because no gravitons can escape from the Black hole. The Black hole is supposed to be a super dense knot of Higgs particles floating inside ( and compressed and attacked by) the energetic oscillating Higgs vacuum frame. (Fig. 2)
In Q-FFF theory it is postulated that only micro black hole nuclei below a certain size are able to evaporate back into the Higgs vacuum. Black hole types larger than ball lightning and small Comets are supposed to have a steady growth.
No photons like gravitons can escape from inside the Black hole. However, in Q-FFF theory, the vacuum is constantly “eaten” by these NEW Black hole nuclei and the origin of the Casimir quantum gravity effect of Black holes..(fig 2,3,4,5,6)

In the Q-FFF model, Fermions are assumed to have a propeller shape equipped with a left- or right hand “pitch” (fig 1) Quarks and some leptons are compound particles (with photonic gluons) however, electrons and positrons are singular.

Only the statistical sum of the different kinds of vacuum impulses (in the form of butterfly shaped vector arrays : fig 5,10) by real collisions from all directions on Fermions are responsible for all (energetic) phenomena in the universe.

The polarisation and so called spin flip of Fermions around Black holes is the origin that Black holes are equipped with a narrow Fermion repelling and plasma creating globular zone between two horizons. (fig, 5,6,7,9,10,11)

As a result, Black holes are Zero Point Energy driven electric generators with negative charge at the outside and positive charge at the inside, able to change the world and our economy.. (page 29,30,31)

The mysterious ball lightning.

What do we observe here? Are we able to analyze the truth and think out of the box?
Calabi Yau structures by the dual axis spin of Fermions, according to Quantum FFF Theory.

Figure 1. Cog wheels, joints and hinges at the Quantum scale of spinning Fermion strings with double rotation axis forming Calabi Yau Manifolds.

Figure 2, Impression of a Quantum Knot based nucleus of the new paradigm Dark Matter Black Hole. The Quantum Knot is supposed to be compressed by the Dark Energy of the Higgs vacuum lattice attracted and absorbed by the nucleus. However black hole nuclei smaller than Comet- or Sunspot nuclei such as Ball Lightning are supposed to evaporate quickly due to the vacuum energy attack.
Photon trajectories through the tetrahedral oscillating Higgs vacuum lattice. (Acc. to Quantum FFF Theory)
A: a real shaped Photon is created by Higgs collision with a dual axis spinning (Calabi Yau) Fermion propeller.
B: that Photon transfers CODED form information (monopole photon info) and direction information into one Higgs particle which transfers this information by mutual Higgs collisionary oscillations through the vacuum in one specific direction.
C,D,E, or F.
I: Only magnetic photonic information (2x: North and South) are subject to curvature by an undisturbed symmetric oscillating vacuum
II: Local Anti-Symmetric Oscillating vacuum Frames are influenced by massive objects like the earth and responsible for semi relativistic effects.
III The vacuum lattice has helix- or chiral quality being the origin of our material universe.

Figure: 3. Photon trajectories through the oscillating chiral vacuum lattice, with Calabi Yau propeller manifolds created by all double axis spinning Fermions, driven by the vacuum collisions.
New Dark Matter Black Hole, “Eat” the chiral oscillating Higgs vacuum. (Quantum-FFF Theory)

Sympilified tetrahedral vacuum lattice structure (left), constructed by complex chiral tetrahedral building blocks (right).
Each universe has to choose between a left- or righthanded rotation of its tetrahedral building blocks. Each chiral lattice has the Planck length and is supposed to be equipped with at least two oscillating massless new Higgs particles.

Black holes EAT the vacuum lattice with the oscillating Higgs particles.
So, the vacuum lattice structure around a black hole could be represented like this.
As a result, the near vacuum is thinner or diluted, it has holes, which could be the origin of the Universal HUBBLE redshift.
By contrast, my new black hole paradigm says: the origin of universal redshift is Dark matter.
Dark matter is the proliferation of vast numbers of Black holes around Galaxies.
Conclusion, based on Hubble redshift, we don't know anything about expansion or contraction of the universe.
(Author Leo Vuyk)

Figure 4, The Chirality principle and structure of the oscillating Dark Energy Higgs vacuum lattice.
The origin of plasma and H2 production originated by pair producing of Quantum Fluctuations around the black hole. The chirality of the vacuum is the origin of preference for positron mergers with photons into composite positive charged Quarks forming ions. Negative Quarks are only stable in the neighbourhood of positive Ions to form protons.
The OLD and NEW Black Hole differences.

The OLD BH
1: has an "event" horizon.
2: has spacetime decrease.
3: has increasing entropy.
4: has infinite gravity in the centre (the zero point).
5: has a lot of mass.

Spacetime decrease
gravity increase

"Light" and "time" horizon
(event horizon).

The NEW Black Hole
1: has an "event" horizon.
2: has spacetime decrease.
3: has decreasing entropy.
4: has finite gravity on the nucleus
5: has no mass!
6: has a "higgsrepulsionzone"

"Light" and "time" horizon
(event horizon).

"Higgs" gravity reversal

Higgs nucleus with dimension
but without MASS.

Figure 6, The difference between the old and new paradigm Black hole according to Quantum FFF Theory.
The NEW Black Hole is equipped with a Fermion repelling horizon. In addition Quantum Fluctuations produce twin Electron-Positron propeller shaped Fermion particles out of two convertible Higgsen. (See the 3D particle zoo of the theory) Quarks \((d,u)\) are created by the “dressing up” these twins with Photon/Gluon particles. So BHs create simple plasma clouds like Bock Globules and plasma pillars in Nebula and Herbig Haro objects. (Author Leo Vuyk)

Figure 7, Quantum Fluctuations as the origin of pair production and Plasma creation (Quarks) around Dark Matter Black Holes.

Figure 8, New Black hole propulsion principle by a self produced plasma-dust tail. As a consequence, New black holes do not merge to form larger nuclei, they even repel negative charged metal surfaces by their own exterior electron charge. (see also fig. 9)
Figure: 9. Evidence for Plasma vapour and even energy production by a micro black hole such as ball lightning or earth bound micro Comet. At the same time it seems a support for the new Black Hole paradigm (see first photo). The BL is propelled against the main wind direction because it left a vapour trail behind and the vapour trail is “washed out” by the wind showing “feathers” of gas. It is clear that Ball Lightnings DENY and violate the second law of thermodynamics and are examples of entropy decrease and even plasma creation.
Figure: 10. Black hole propulsion and pairing principle of fig 8, seems to be the origin of dual Stellar or galaxy Anchor black holes (see figure 11) and even so called Birkeland/Alfven current circuits around stars and galaxies by vacuum polarization. The energetic polarized vacuum oscillation spectrum is the motor for fast gas and electron transport starting direct after the big bang.
Figure: 11. Examples of dual pairs of stellar anchor black holes and the so-called Spire creation of star forming dust pillars by a splitting and pairing black hole, also proposed for the fast galaxy formation after the big bang. (fig 12)

The CPT SYMMETRIC MULTIVERSE CYCLE.

http://bigbang-entanglement.blogspot.com/

The Pulsating Multiverse depicted as a continuous flow of increasing and decreasing numbers free oscillating- and Black hole condensed Higgs particles and the amount of Quarks and leptons. The size of the pulsating multiverse vacuum is given in orange.

Figure: 12. Abundant Black Holes observed in the early universe by the CIB and CXB of Chandra and Spitzer space telescopes (2013). A strong support for the Quantum FFF theory based Black Hole splitting Big Bang and contracting Big Crunch Cycle of the Multiverse.
Characteristics of Quantum FFF Theory.

1: The clear MICROSTRUCTURE or the 3D FORM of elementary particles, (also called 3D-Preons) made out of convertible Higgs particles, is responsible for “Bound states of Fermions” and composite Quarks. (ref. 4)

2: The Higgs is supposed to be energetic oscillating, it is the origin all particle motion and spin states and Dark energy (126 Gev) inside a truncated tetrahedron shaped chiral vacuum lattice. The lattice chirality (left or right handed) is the origin of our material universe. Higgs particles are zero point “Planck Oscillators” the origin of the Casimir force, waiting to be harnessed as free energy. (ref. 17)

3: NOTHING SUCKS IN PHYSICS, Gravitons act counter intuitive with less pressure on Fermions than the Higgs vacuum (dark energy) and all particles and vacuum photonic information ( radiation) is ENTANGLED by INSTANT communication between at least two anti-copy UNIVERSES or MULTIVERSE, being entangled since the big bang. (ref. 7)

4: Black holes of all sizes (down to ball lightning) do not emit gravitons, they feel only Casimir Gravity of the vacuum oscillations so they are massless but counter intuitively the origin of dark matter and producers of all Hydrogen by Electron and Positron pairs as horizon fluctuations and repel all Fermions even positrons at the double BH horizon. ( ref. 9,10,11 )

5: Black Holes are supposed to have a negative electron based surface charge in a material based universe and a positive charge inside an ANTI-material universe, due to the chirality (left or right handed vacuum lattice spiralling) of the oscillating dark energy Higgs vacuum. (ref. 27,28).

6: The Multiverse is Pulsating by two phenomena, A; vacuum (Higgs) eating new paradigm dark matter black holes (causing the Hubble redshift) and B: by universal expansion caused by the oscillation force (Dark energy) of the Higgs vacuum lattice. (ref: 33)

FUNCTION FOLLOWS FORM in Quantum FFF-Theory. The Microstructure of elementary particles, is supposed to be the origin of FUNCTIONAL differences between Higgs- Photon- and propeller shaped Fermion particles. Something SMALL is missing in mainstream physics: a NEW splitting and pairing MASSLESS BLACK HOLE, the origin of all dark matter, Ball Lightning Micro Comets , Comets, Sunspots up to Galaxy external Anchor Black Holes and the Big Crunch of the CP symmetric pulsating raspberry shaped multiverse.

The multiverse is a collection of huge entangled pinball machines, with dark energy in the form of linear oscillating double Higgs pins as the origin of photonic collision products with the propeller shaped Fermions running and spinning as balls.

All forces are the result of this entangled Pin-Ball interaction. The 126GeV Boson recently found in the LHC is not supposed to be a single but a double massless Higgs boson linear oscillating in tandem as opposing boxer engine pistons in a chiral truncated tetrahedron lattice.

The 126GeV energy is the base for universal dark energy, the frequency is the base for local time and the length a base for the Planck scale. (Twin Higgs, Dual Higgs, Duplex Higgs, or Tandem Higgs).

AS A RESULT, Free energy devices and electron-muon decay levitation is proposed. An unstable Higgs vacuum seems to be present around all black hole horizons by observed H2 production and annihilation radiation created by pair production of positrons and electrons. (Instability of the Higgs field)
The main difference with mainstream physics is in short as follows:

A: That a "black hole" has no mass- it does not emit gravitons-, but is the origin of all "dark matter" in the universe and can exist at all scales from Quantum Knots (or Ball lightning) up to Comets, Sunspots, external Galaxy Anchor Black Holes, up to the Big Crunch- or Big Bang Black Hole.

B: That "dark energy" is based on microscopic massless vacuum (non SM) Higgs particles, energetic oscillating in opposing pairs and able to convert into pairs of electrons and positrons, e.g. at the horizon of black holes.

C: That the 126 GeV mass of the Higgs particle (found by the LHC in Geneva) could be translated into 126 GeV energy of the paired vacuum particles. (alternative non SM Higgs) (And is consequently THE FIRST SIGN OF "DARK ENERGY") The LHC found a first sign of Dark Energy!!

D: That as a result, the Universe is cyclic, super symmetric and has the form of a raspberry shaped pulsating symmetric Multiverse with finite cycle time.

E: That all matter and humans have their instant entangled copy symmetric counterpart living inside the opposing super symmetric lobes of the raspberry multiverse. which is supposed to be the base for consciousness.

F: That Humans have the ability to influence conscious acts by a small retardation or lagging effect (300 m.sec) in decision making. This lagging effect phenomenon is already found and described for humans by Benjamin Libet, called RPI and RPII (Readiness Potential 1 and 2) see: “Wavefunction Collapse and Human Choice-Making Inside an Entangled Mirror Symmetrical Multiverse.” (Ref. 6,43.)
Comparison of the Final ESA CMB Planck map with a cross section through the Raspberry Multiverse according to Quantum Function Follows Form theory. Compare the Cold Spot with the Void and the Warmer and Colder Hemisphere of the Plack CMB (left) with observation boundaries (right).

The raspberry multiverse.
The CPT symmetric raspberry universe seems to be the result of Fractal shaped evaporation, of the content of a cyclic central big crunch black hole, into egg-shaped spheres with individual Cosmic Microwave Background (CPT—Charge Parity and Time) 3-D suggestion for the resolution of the so called "MISSING GALAXY SHADOWS". All the Galaxy (clusters) located behind the WMAP CMB boundary (outside our own universe) do not create some kind of SHADOW on the 2.7 Kelvin cosmic background radiation.

2-D Section through the raspberry universe, with huge void in the middle. The void in the middle is supposed to be flanked by the start of the Fractal process, when the vacuum density of the former cyclic multiverse was still too high for a fine grained fractal structure on the scale.

Quantum FFF theory is a combination of a holistic and a reductionist approach of nature. Holistic by the introduction of complexity into the sub quantum geometry or microstructure of elementary particles and fields and reductionist, by reducing that complexity into single elements and monopole forces.

However all these particles and fields are supposed to be connected by continuous active information fields called instant entanglement, between one or even more symmetrical anti matter universes at a long distant.

If particles combine together into simple knots they form quarks and some leptons.
If these knots become more complex (more than 6 particles) they are supposed to form ball lightning alike Casimir energy producing systems called micro black holes.
If stars explode into supernovas they for also quantum knots based on the remaining particles left over from the star’s interior and form black holes.
All black hole nuclei are supposed to be based on such quantum knots.
The big bang is supposed to be the evaporation and explosion of the one and only big crunch black hole.

As a consequence we live inside a cyclic symmetric multiverse interconnected by instant entanglement between these anti-copy universe at the quantum scale.

Consciousness should also be subject of this active information system, and my thoughts are continuous competing with my brothers over there…. (Leo Vuyk)

Figure 13, The Pulsating Raspberry shaped Multiverse also to be observed from the Planck Cosmic Background Radiation image.
Synchrotron radiation by Polarized Fermion spin combined with high speed motion through the resistive oscillating Higgs vacuum (according to Quantum FFF theory).

The polarisation of the double spinning propeller shape of Fermions is the origin of the monopole radiation differences radiated into different directions from the Fermion radiation area around the centre. It is assumed that electric and gravity radiation is not mixing with magnetic monopole radiation inside the magnetic double cone area. Consequently, the measured difference between the Equatorial gravity (9.78 m/sec²) and Polar gravity (9.83 m/sec²) should be greater without this effect.

Figure 14. The polarisation of the double spinning propeller shape of Fermions is the origin of the monopole radiation differences radiated into different directions from the Fermion radiation area around the centre. It is assumed that electric and gravity radiation is not mixing with magnetic monopole radiation inside the magnetic double cone area. Consequently, the measured difference between the Equatorial gravity (9.78 m/sec²) and Polar gravity (9.83 m/sec²) should be greater without this effect.
Magnetic field variations by the “Curl” of Magnetic Monopole (N and South) Radiation around a wire and the earth.

According to Quantum FFF theory, all magnetic fields can be presented as DUAL Magnetic Monopole Photon Vector Arrays. These monopole arrays undergo curvature. As a result, the magnetic field intensity around the Earth and a wire is NOT dropping off with the square of the distance from the source!! The field become stronger polarized away from the source (See images). Close to the current transporting wire the magnetic field strength is zero due to the parallel trajectories of North and South Photons before curvation and polarisation of iron powder (Author: Leo Vuyk)

TWO (North and South) Monopole Photon trajectories around a current in a wire shown in cross section. Between the two yellow circles both (N+S) trajectories are pointing about parallel. The result: No iron Powder orientation between the concentric circles, as is observed in the lab (see upper photo). This is a firm support for the monopole photon vector array element of Quantum FFF Theory.

Figure 15, Magnetic field variations originated by the curl potential of Magnetic monopole vector arrays around a wire or around the earth.
Figure 16. The particle zoo of single ELEMENTARY particles made out of ONE convertible Torus shaped Higgs particle, equipped with three hinges of 90 degree rotation.
Figure 17. 5x different shaped Photon/Gluons can combine with the two propeller shapes of the Electron and Positron to form all coloured (QCD) Quarks and even a so called Top Prime Quark. The Muon and Tau particle are supposed to be the same as the Down quark, respectively the Charm quark.
Polarized Fermion Mass in motion through the resistive, but also pushing oscillating Higgs vacuum (according to Quantum FFF theory)

Cross section through the 3D vector field pressure distribution on a Fermion point mass (1). Propeller shaped spinning Fermions are supposed to be Polarized into the direction of flight through the vacuum lattice (2). As a result, the resistive vacuum Higgs force (3) is compensated by the Higgs Pushing force (4) from the “backside” of the Fermion. However every Fermion need to have polarization memory consciousness. (by a multi universal entanglement system see: Quantum-FFF theory)

Figure 18. Polarized Fermion based Mass in motion through the resistive BUT also pushing (from the back, called warp drive) oscillating Higgs vacuum lattice
Quantum Knot based Micro Black Holes (Ball Lightning), produced by Photon interference in air and in Silicon globules according to Quantum FFF Theory.

Could Zero Point Electric Energy (ZPEE) of small dual black hole energy systems save the world?

The exhaustion of earth’s resources, the criminal financial system, consumerism, overpopulation, poverty, corporate and personal greed, have brought the earth in great danger. The only way out, seems to be a dramatic but radical change of all these subjects. However what radical change, should save us and prevent chaos and a third world war? My only guess is Free Zero Point Electric Energy (ZPEE) Vacuum Energy by New Physics, based on Birkeland/Alfven electric currents found around the earth and galaxies, adapted to local/regional scales of use. As a consequence all physics intelligence power and finance should be much more focussed on so called “Energetic Blind Spots” in physics and astronomy on local and universal scale. Examples:

A: There is still no serious world wide coordinated research on Ball Lightning and Earth bound micro Comets going on!
B: Physicists are still guessing about the real origin of the magnetic power of Sunspots!
C: The energetic origin of Comets is a mystery, though the research on Comets is taken more serious in the last years.

Secondly we have to think about new political structures to be able to change the base of world scale ZPEE electricity based food production techniques, earning models and law, to create a democratic Sustainable SUPER SOCIAL SOCIETY. Only supported by free local/regional electric vacuum energy, the world will be able to produce local food even in deserts, by influencing the weather/climate conditions by global air conditioning, and to build a world federation of stable local societies governed by computer aided management of production and consumption. If we are able turn to the deserts by weather/climate change into fertile land, the world should be able to feed a multiple number of inhabitants under the sun, than we have now.

Introduction.

It is an ongoing debate between physicists what the origin should be of the well known polar Birkeland currents and so called electric Alfven circuits measured around earth and around galaxies. If we have found the origin of these electric circuits, we probably have also found the origin of several other energetic mysteries on earth and in space, as there are; Ball Lightning, Earth bound Micro Comets, Comets and Sunspots. The so called Electric Universe Theory has uncovered lots of important cosmological facts around this issue. (ref. 1) However even this theory does not have a clear physical answer about the origin of these electric currents. Could it be, that beyond the standard model there is room for an extra role of dark matter and black hole physics? Professor Matt Strassler wrote about black holes: Why has the controversy gone on so long? It is because the mathematics required to study these problems is simply too hard — no one has figured out how to simplify it enough to understand precisely what happens when black holes form, radiate particles, and evaporate.

http://profmattstrassler.com/2013/09/16/a-quantum-gravity-cosmology-conference/
Recently it was even Stephan Hawking who changed his mind about the character of the “apparent horizon” of black holes (ref 2). “Hawking: Black Holes Do Exist—but it’s Complicated” | TIME.com

**Sunspots, Comets and Ball Lightning.**

Could sunspots, comets and ball lightning represent a new kind of Quantum Knots or Dark Matter Black Holes of different sizes, as the origin of those electric currents, or do we have to look for larger scale sunspot resembling objects?

The conventional sunspot solutions,

“How Are Magnetic Fields Related To Sunspots?”
http://sohowww.nascom.nasa.gov/explore/lessons/sunspots6_8.html

Wikipedia:

“They are caused by intense magnetic activity, which inhibits convection by an effect comparable to the eddy current brake, forming areas of reduced surface temperature. They usually appear as pairs, with each sunspot having the opposite magnetic pole to the other.”

https://en.wikipedia.org/wiki/Sunspot

Solar energy output is now understood to be a result of a dynamo mechanism within the sun, converting the energy of plasma flow beneath the surface of the sun to magnetic energy foci on the surface that are observed in the form of sunspots.

The electric universe theory by Wallace Thornhill and David Talbott.

It is suggested that sunspots produce enormous electric currents (ref. 3)
(Thunderbolts) “Electric Sunspots” by Wallace Thornhill and David Talbott.

“Conventional theorists look to magnetism to solve the problem of solar energy distribution. If they were to open their eyes to the electrical cause of magnetism, the solution would suddenly become visible.”

The puzzle: Why do sunspots last for weeks instead of flying apart? Like huge magnets, strong magnetic fields in sunspots naturally repel each other. What holds them together?
http://soi.stanford.edu/press/ssu11-01/

Sunspots are not the result of convection of gas modified by magnetism. Sunspots are electrical structures.
