Abstract: It is hypothesized that consciousness itself is a genuine singularity.

As a conscious being I can not think of anything that does not have a measurable physical extension and interact directly with the physical world other than a person's awareness. Consciousness itself is not 3 dimensional until shown otherwise, (as well has never been measured or found to have a source in the brain), thus we can consider consciousness as not having any dimension. Thus consciousness is zero-dimensional. The only zero-dimensional idea in existence is a singularity.
