

# Scientific Miracles of God and a Cataclysm

Sylwester Kornowski

**Abstract:** There are the two strong evidences of existence of God i.e. the imprinted on Europe the arrangement of the 7 stars/"sisters" in the Pleiades and the numerical connections between science and religion. There are the two (N)ucleons, seven (H)yperons and four (D)elta ground resonances. They all are the (B)aryons. On the other hand, the distinguished first letters N.H.D. B are the initials of Niels Hendrik David Bohr. It suggests that atom-like structure must concern the baryons as well and it is in the lacking part of ultimate theory i.e. the Scale-Symmetric Theory. The crucial numbers in the Revelation of St. John and the Scale-Symmetric Theory are the same so God knows the ultimate theory. If the knowledge deciphered by Albert Slosman from hieroglyphs and manuscripts is correct then the Revelation of St. John and Scale-Symmetric Theory lead to a cataclysm in the solar system. I showed also that the Maya Calendar is associated with the Scale-Symmetric Theory as well. There are a few fundamental mistakes in mainstream cosmology and particle physics.

## 1. Revelation of St. John

*Infinite nothingness*

*Probability equal to zero*

God

*Important but short life*

*Many names in God's bad books*

*Eternity wins, eternity wins, eternity wins...*

The scene around the Throne in the Heavens is as follows [1].

God who is sitting on the throne is like a jasper stone and a sardius. The first (1) foundation of the wall of the Holy City is jasper whereas the sixth (6) is sardius. The rainbow around the Throne is like an emerald. The fourth (4) foundation of the wall is the emerald. Around the Throne there are twenty-four (24) thrones and upon the thrones twenty-four elders are sitting.

Before the throne are seven (7) lamps of fire i.e. the 7 Spirits of God. In the midst of the Throne and around the Throne there are four (4) living creatures. Each one of them has six (6) wings. On the right hand of God was a scroll sealed up with seven seals (7). A Lamb has seven horns (7) and seven eyes (7).

We can see that the characteristic numbers for the scene around the Throne in the Heaven are as follows: 1, 6 (God), 4, 6 (Throne, rainbow, living creatures), 7 (Lamb), 24 (elders). I will prove that these numbers are the same as the characteristic ones for the Scale-Symmetric Theory.

Recapitulation: The main series  $S$  for the living beings is as follows: 1, 6 (God), 4, 6 (living creatures), 7 (Lamb) and 24 (elders) i.e.

$$S \equiv 1, 6, 4, 6, 7 \text{ and } 24$$

Notice that the sum of the numbers in the series  $S$  is 48. We can say that the number 48 represents the Heavens.

The sum of the squares of the numbers in the series  $S$  is

$$1^2 + 6^2 + 4^2 + 6^2 + 7^2 + 24^2 = \underline{714}.$$

The sum of the number of Heaven 48 and number 666 which represents the Hell is 714 as well!

$$48 + 666 = 714.$$

This suggests that the Hell is separated from the Heavens but Heaven rules over the Hell.

The number 714 can lead to dates also. For a date  $ab-cd-efgh$  should be  $a + b = 7$ ,  $c + d = 1$  and  $e + f + g + h = ij$ , where  $i + j = 4$  There are many such dates.

Notice that for God and living creatures in the midst of the Throne and around the Throne is:

$$\underline{1646} \text{ and } 1 \cdot 6 \cdot 4 \cdot 6 = \underline{144}$$

There are 3 evil beings i.e. the **red** dragon (Satan), the beast out of the sea i.e. the Antichrist (generally, the seas are **blue**) and the beast out of the Earth i.e. the false prophet (sometimes we say "**green** planet" about the Earth).

## 2. The Scale-Symmetric Theory

*No sizeless physical points*

*No Cosmos from nothingness*

*But structureless pieces of space and their motions*

*Nothingness means nothingness*

*Negative gravity needs positive inertial mass*

*Particles need grainy spacetime*

*Gravitational constant needs neutrinos and Higgs field*

*Interactions need tori/charges with ball/condensate in their centre*

*Nothingness means nothingness*

The General Relativity leads to the non-gravitating Higgs field composed of tachyons [2A]. On the other hand, the Scale-Symmetric Theory (SST) shows that the succeeding phase transitions of such Higgs field lead to the different scales of sizes [2A]. Due to the saturation of interactions via the Higgs field and due to the law of conservation of the half-integral spin

that is obligatory for all scales, there consequently appear the superluminal binary systems of closed strings (entanglons) responsible for the quantum entanglement, stable neutrinos and neutrino-antineutrino pairs which are the components of the Einstein spacetime (it is the Planck scale), cores of baryons, and the cosmic structures (protoworlds) that evolution leads to the dark matter, dark energy and expanding universes [2A], [2B]. The non-gravitating tachyons have infinitesimal spin so all listed structures have internal helicity (helicities) which distinguishes particles from their antiparticles [2A]. SST shows that a fundamental theory should start from infinite nothingness and pieces of space [2A]. Sizes of pieces of space depend on their velocities [2A]. The inflation field started as the liquid-like field composed of non-gravitating pieces of space [2A]. Cosmoses composed of universes are created because of collisions of big pieces of space [2A], [2B]. During the inflation, the liquid-like inflation field (the non-gravitating superluminal Higgs field) transformed partially into the Einstein spacetime [2A]. In our Cosmos, the two-component spacetime is surrounded by timeless wall – it causes that the fundamental constants are invariant [2A], [2B].

Due to the symmetrical decays of bosons on the equator of the core of baryons, there appears the atom-like structure of baryons described by the Titius-Bode orbits for the nuclear strong interactions [2A].

The Scale-Symmetric Theory starts from 7 parameters and a few very simple formulae only that follow from the initial parameters. Within SST, I calculated the basic physical constants (they are the parameters in the mainstream theories) and this theory leads to the initial conditions applied in the two dominant mainstream theories i.e. the General Relativity and Quantum Physics so the Scale-Symmetric Theory is the lacking part of ultimate theory. Within this theory, I solved all basic problems unsolved within the mainstream theories and calculated a thousand of fundamental physical quantities (they are consistent or very close to experimental data).

The Scale-Symmetric Theory points the fundamental mistakes in the mainstream cosmology and the mainstream particle physics:

### 1.

Contrary to mainstream cosmology, SST shows that the inflation (the big bang) was separated in time from the beginning of expansion of the Universe (the “soft” big bang).

The Michelson-Morley experiment is wrongly interpreted. Just the quantum entanglement fixes the speed of light in “vacuum”  $c$  as the relative radial speed of photons in relation to their sources or a last-interaction object (it can be a detector). It causes that in cosmology, generally, the spatial distances to galaxies differ from time distances concerning the speed  $c$  – it is the duality of relativity.

The two above main mistakes cause that there appear many ideas that are not realized by Nature, for example, that the Universe accelerates its expansion.

### 2.

Within the 3-valence-quarks model we for more than a half of century cannot calculate from initial conditions the exact masses and spins of nucleons i.e. of the fundamental objects of matter. It suggests that this model is incorrect. On the other hand, the atom-like structure of baryons described within the Scale-Symmetric Theory leads to the masses and spins of nucleons and to masses of quarks that are the initial conditions in the Standard Model.

The SST starts from 7 parameters that describe properties of the two-component grainy spacetime (i.e. the Einstein spacetime and the Higgs field). One parameter (1) defines the mass density of the Einstein spacetime and six parameters (6) define properties of the Higgs

field. Simple symmetries lead to the 4 succeeding phase transitions of the Higgs field and due to them there appear 6 additional interactions i.e. quantum entanglement, confinement, gravity, electromagnetism and the strong and weak interactions (the fundamental interaction (1) that follows from the viscosity of tachyons concerns the Higgs field). We can see that the succeeding phase transitions lead to following scheme of interactions:  $1 + 6 = 7$ . Within the Scale-Symmetric Theory, I derived the ultimate equation (it ties masses of sources of all types of interactions).

Outside the core of baryons, there is obligatory the Titius-Bode law for the nuclear strong interactions i.e. there are 4 orbits and their radii defines following formula  $r = A + dB$ , where  $A/B = 1.3898$  whereas  $d = 0, 1, 2, 4$ . To describe shape and motions inside the neutrino-antineutrino pairs (the ground state of the Einstein spacetime consists of them) we need 24 quantities.

We can see that the main series  $S$  characteristic for the Scale-Symmetric Theory is the same as for Heaven:

$$S \equiv 1, 6, 4, 6, 7 \text{ and } 24$$

The sum of the all numbers in the main series  $S$  is 48.

The Scale-Symmetric Theory leads to following number:

$$1^2 + 6^2 + 4^2 + 6^2 + 7^2 + 24^2 = \underline{714} = 48 + \underline{666}.$$

In the Scale-Symmetric Theory there appears also following number  $A/B = 1.3898$ .

In physics, the number 666 is associated with the quark model i.e. there are the 6 **red** quarks, 6 **blue** and 6 **green**. The Revelation of St. John suggests that there will be a war between the God-Theory/SST (the number 48 represents the Heavens) and the 3-valence-quarks model of neutrons and protons (the number 666 represents the Hell). But I must emphasize that the Scale-Symmetric Theory shows that the quark model is partially correct ( $714 = 48 + 666$ ). Within the Scale-Symmetric Theory, we can calculate the masses of quarks (they are the parameters in the Standard Model).

The Revelation of St. John suggests as well that the God Theory (48 and  $714 = 48 + 666$ ) will win with the mainstream quark model (666).

The number of Heaven 48 we can write as follows:

$48 = 2 \cdot 4 \cdot 3 \cdot 2$ . These 4 digits we can write in following form  $2 \cdot 4^{32}$ . This number leads to DNA, and is associated with the four-neutrino symmetry [2A], [3]. This suggests that Heaven (48) is and will be a spore of life.

There are the next interesting coincidences. We should notice that on the first circle associated with the cross of the prime numbers [4] there are the 24 natural numbers and 10 prime numbers i.e. 1, 2, 3, 5, 7, 11, 13, 17, 19 and 23. The 1 is the peculiar prime number. We can see that indirectly the decimal system is associated with the 10 prime numbers on the first circle. Notice also that for the Throne in Heaven we have  $4 + 6 = 10$  as well. A day and night consists of twenty-four hours (24). For God we have  $1 + 6 = 7$  and each week has seven days. If we add the number of Holy Virgin i.e. 12 (there are the 12 stars) to the number of Heaven 48, we obtain the number 60. One hour or degree of arc has 60 minutes and minute has 60 seconds. The sum of the first 24 natural numbers is 300. If we add the 60 (the Heaven and Holy Virgin) to the 300, we obtain 360. Circle has 360 degrees.

The Theory of Everything (ToE) consists of following three theories: the Scale-Symmetric Theory, QUantum Physics and RElativity. We can see that the ToE we can refer to as the SQUARE Theory – in 1958, Wolfgang Pauli made use of this word as a joke. In history of civilisation, ultimate theory appeared many times. The present dream began in 1958. On the radio interview, Heisenberg said that they, i.e. Pauli and himself, were able to explain the masses of various particles. Pauli comment was rapid. In his letter, he drew a blank SQUARE and put down the comment “This is to show the world, that I can paint like Titian. Only technical details are missing”. We can see that the Pauli picture of the ToE was a SQUARE. Today, we can see that Pauli intuition was amazing.

### 3. A world cataclysm

The ancient documents suggest that the periodic cosmic cataclysms follow from rotation of the solar system as a whole (?) so we should observe a rapid movement of Earth in the zodiac [5]. Can such rapid rotations of the solar system as a whole be possible? Assume that in the thin coatings is distinguished a magnetic axis lying on planes defined by the coatings. On the other hand, the magnetic axis of the solar system can be defined by magnetic field of the Sun. It means that there can be some rotations due to the magnetic interaction of the solar system and a coating. But why the solar system behaves during such interaction as a rigid body? Could it be due to a higher activity of dark matter during the transition of the solar system through the thin coatings? Probability of such phenomenon is very low but we assume that the ancient messages are true.

At the beginning of the expansion of our Universe, our Galaxy was the black hole composed of the neutron black holes [2B]. Due to the inflows of the dark matter and dark energy, there was the exit of our Galaxy from the black-hole state. The dark matter consists of the additional Einstein-spacetime components entangled with visible matter whereas the dark energy consists of the free additional Einstein-spacetime components (they interact gravitationally only) [2B] – it appeared due to evolution of the cosmic object/Protoworld (it appeared after the inflation but before the expansion of our Universe). Near to black holes is obligatory the Titius-Bode law [2A]. It caused that there appeared thin coatings composed of the entangled neutrino-antineutrino pairs that interact weakly with iron-nickel lumps highly polarized magnetically. In present-day, the thin coatings are parallel to the disc of our Galaxy and their distribution defines the Titius-Bode law  $D = f R$ , where  $f$  is a factor,  $R = A + dB$  is for the solar system (the  $A/B$  ratio is the same as for the strong interactions i.e.  $A/B = 1.3898$  and  $d = 0, 1, 2, 4, 8, \dots$ ).

Calculate the factor  $f$  for our Galaxy.

The distance  $f(A + 2B)$  should be equal to the mean radius of the Earth orbit multiplied by some factor  $f$  i.e.  $f \cdot 1.49597870 \cdot 10^{11}$  m. This leads to conclusion that  $fA = f \cdot 0.613336 \cdot 10^{11}$  m whereas  $fB = f \cdot 0.441321 \cdot 10^{11}$  m. And now instead a scientific theory there appears numerology. The number characteristic for Heaven is 48 so assume that the factor  $f$  is  $f = 4^8 = 65536$  (SST shows that the factor  $f$  should depend on masses of typical black holes). Assume that the up-down oscillation of the solar system in relation to the plane of disc composed of the visible matter defines the speed  $v = f \cdot 0.1646$  m/s. This value is composed of the four numbers (1, 6, 4 and 6) associated with the God and living creatures. Then, the solar system covers the distance  $fA$  during 11808 years whereas the distance  $fB$  during 8496 years (the last period appears in the Patrick Geryl book as well [5]!). This leads to the up-down speed equal approximately 10.787 km/s. This speed is the 4.3 % of the speed of the Sun on the orbit around the centre of the Galaxy.

Below are some corrections to the numerology presented in the Patrick Geryl book ([5]) that follow from the correct interpretations of the Albert Slosman discoveries [6].

The zero point on the time axis is the end of the year 753 since the establishment of the town Rome. Assume that the Atlantis was established in the year  $-36000$  when the solar system was between the coatings placed in the distances  $A + 2B$  and  $A + B$  from the plane of the visible disc. The solar system approached the coating in the distance  $A + B$  from the plane of the visible disc in the year  $-30096$  i.e. 5904 years since the beginning of the Atlantis. The next cataclysm was after 8496 years when the solar system approached the coating in distance  $A$  from the plane of the visible disc. It was the year  $-21600$ . The next cataclysm was after 11808 years when the solar system approached the plane of the visible disc. It was in the year  $-9792$  (this year of cataclysm appears in the Patrick Geryl book as well). The next cataclysm will be also after 11808 years when the solar system will cover the distance  $A$  on the opposite side of the plane of the visible disc. It should be the year  $+2016$ . But we do not know the present-day exact value of the up-down speed (probably it is about  $7 \pm 2$  km/s) and we do not know whether during the thousands of years there was continuity of the calendar.

The code that leads to the year  $+2016$ , not to 2012, is as follows. There should be only the numbers which we can divide without a rest by  $144 = 1 \cdot 6 \cdot 4 \cdot 6$  (also the years associated with the signs of the zodiac). The end of the sign Pisces will be in the year  $+2016$  after the 2016 years. Next cataclysm will be in the year  $+10512$  and the subsequent in  $+19008$  and  $+36000$ . Do you see the symmetry for the last year and the establishment of the Atlantis? In the Patrick Geryl book, the era of Leo, before the year  $-9792$ , should last 864 years, not 576. We also see that the year  $+2012$  we cannot divide without a rest by 144. The period between the establishment of the Atlantis and the cataclysm in the year  $+2016$  is 38016 years long ( $38016 = 792 \cdot 48 = 264 \cdot 144$ ).

The cataclysms should be symmetrical so in the year  $+2016$  should be some 72 degrees movement of Earth in zodiac [5], [6]. It should last about a half of hour so the cataclysm in  $+2016$  will be short-lived. The 72 degrees corresponds to  $26208 \cdot 72 / 360 = 5242$  years, where the 26208 years is the period of the precession of the Earth axis i.e. it corresponds to the 360 degrees movement. This follows from the symmetry of the ancient zodiac – there are six groups each containing two tangent signs and lasting following number of years: Aries + Taurus 2·2304, Gemini + Cancer 2·1872, Leo + Virgo 2·2592, Libra + Scorpion 2·1872, Sagittarius + Capricorn 2·2448 and Aquarius + Pisces 2·2016. We can see that one period of precession of the Earth orbit lasts 26208 and this period is the sum  $5904 + 8496 + 11808 = 26208 = 182 \cdot 144$ .

The calculated year of the approaching cataclysm based on the symmetry of the ancient zodiac and symmetry of the cataclysms (most important is the cataclysm in the year  $-21600$ ) is  $+2016$ .

Notice that the era of Aquarius begins +March 20, 2016: 4:30 UTC.

Due to the 72-degrees movement, the vernal equinox will be in the year 1382 of the era of Taurus – it is on assumption that the movement will not be in accordance with the movement of Earth ( $5242 = 2016$  years in Pisces + 2304 in Aries + 922 in Taurus;  $922 + 1382 = 2304$ ). This means that after the cataclysm in 2016, the vernal equinox will be for 922 years

in the Taurus of the ancient zodiac and in the  $+2016 + 922 = +2938$  year will begin the era of Aries.

Now assume that the movement will be in accordance with the movement of Earth. Then the vernal equinox will be in the year 778 of Sagittarius ( $5242 = 2016$  years in Aquarius + 2448 in Capricorn + 778 in Sagittarius;  $778 + 1670 = 2448$ ). This means that after the cataclysm in 2016, the vernal equinox will be for 1670 years in the Sagittarius of the ancient zodiac and in the  $+2016 + 1670 = +3686$  year will begin the era of Scorpion.

The numbers 54 and 22 are associated with the year +2016 i.e. with the 38016 years since the establishment of the Atlantis – the number 38016 consists of two numbers 38 and 16 separated by zero. We obtain  $38 + 16 = 54$  and  $38 - 16 = 22$  – see the interpretation of the numbers 54 and 22 in the Patrick Geryl book [5]. There are also the 38 solar eclipses during each 16 years.

The long march [5] began in the year  $-8352$  i.e. 10368 years before the year +2016 ( $10368 = 216 \cdot 48$ , where 216 is the sum of the phase spaces of the stable objects arising during the four phase transitions of the Higgs field:  $10 + 26 + 58 + 122 = 216$  [2A]; but also  $10368 = 72 \cdot 144$ ).

#### 4. The Maya Calendar

Nature is crying:

*I am mathematically very simple!*

*Add to the time the 3 spatial dimensions only*

*Can you see the phase transitions everywhere?*

*Spacetime transforms to the stable objects too*

*Can you see the atom-like structure everywhere?*

*Baryons have orbits*

*Nucleons produce the particle zoo*

*God did this via  $1 + 6 = 7$  'days'/parameters/interactions*

The Maya Calendar is associated with the four-neutrino symmetry and the four phase transitions [2B]. From following formula  $X = 4^d + 4$ , where  $d = 0, 1, 2, 4$ , (they are the numbers in the Titius-Bode law for the nuclear strong interactions [2B]) we obtain following numbers: 5, 8 ( $5 + 8 = 13$ ), 20 and 260. The numbers 13, 20 and 260 lead to the Maya Calendar [7]. The sum  $5 + 8 = 13$  has physical meaning because the elements arising due to the first phase transition (i.e. the closed strings) are bound inside the neutrinos i.e. inside elements arising due to the second phase transition. The calculation transforming the Maya Calendar into the Gregorian calendar leads to the data +December 21, 2012.

The starting point of the Maya Calendar is 13.0.0.0.0. 4 Ahau 8 Cumku. The 13.0.0.0.0. can represent the 13-th day of the era of Aquarius i.e. the assumed day of cataclysm. The digits 4 and 8 associated with a Calendar Round position, lead to the number of Heaven 48.

There is wrong interpretation of the end of Maya Calendar. The number 1,872,000 concerns the 365-day years, not the 365.2422-day year. This means that in reality from the beginning (August 11, 3114 B.C.) to the end of Maya Calendar are  $1,872,000 / 365 =$

5128.767123 the 365.2422-day years. Since the year 2016 is the leap year then  $0.767123 \cdot 366 = 281$  days. We can see that the new interpretation leads to following data

+May 18, 2016

This is the 96-th anniversary of birthday of John Paul II. This day can be a beginning of new social system on Earth.

## 5. Pleiades in religions and physics

*Time is linear motion*

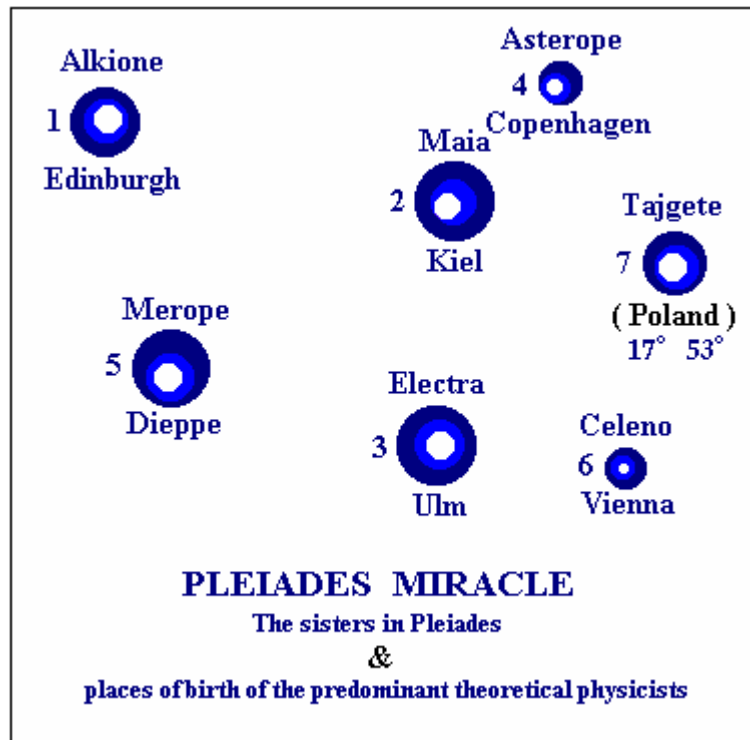

*Space is real volume*

*I am built of spacetime components*

*Can God manipulate it?*

*Can God destroy it?*

*Timeless wall surrounds Heaven*

There are following basic Baryons: 2 Nucleons, 7 Hyperons and 4 Deltas. The first letters B: N, H, D, are the same as the initials of Bohr (Boehr Niels Hendrik David) i.e. initials of the author of the atom structure. This suggests that baryons should have an atom-like structure also. Such structure is described within the Scale-Symmetric Theory i.e. within the lacking part of ToE. Notice that there is some analogy between the most basic baryons i.e. the 2 nucleons and 7 hyperons and the 2 parents (Atlas and Pleione) and 7 sisters (Alkione, Maia, Electra, Asterope, Merope, Celeno and Tajgete) in the Pleiades. The Pleiades are important in the Maya religion because the Way of Deceased points the setting Pleiades. In the Revelation of St. John, we can read about 2 most important beings in Heavens (God and Lamb) and the 7

Ghosts of God. The Scale-Symmetric Theory shows that Nature is built of tachyons and closed strings (2 types of particles) and we need 7 parameters to describe Nature.

The revolutions in theoretical physics are associated with papers written by following physicists:

1. Maxwell (1831 – 1879): theory of electromagnetic waves,
2. Planck (1858 – 1947): Planck constant,
3. Einstein (1879 – 1955): electromagnetic quanta and relativity,
4. Bohr (1885 – 1962): structure of atom,
5. de Broglie (1892 – 1987): waves of matter,
6. Pauli (1900 – 1958): neutrino, Exclusion Principle,
7. ? ( ? ): the lacking part of Theory of Everything.

In the figure, we can see the arrangement of the 7 stars/sisters in Pleiades and arrangement of places of birth of the 6 predominant theoretical physics. Both arrangements are self-similar (dual)!

On map of Europe, we can mark the places of birthdays of the mentioned physicists. If the 7-th physicist was born in Poland, for example in the place  $17^{\circ}, 53^{\circ}$  ( $17 + 53 = 70$ ;  $7 + 0 = 7$ ), then arrangement of the places of birth is similar to the 7 stars/sisters in Pleiades. We can see the connection between religions and theoretical physics. Is it due to the “Pisom K’ak’al” (the mysterious entangled force) that appears in the Mayan documents? I should emphasize that some code shows that the Pisom K’ak’al leads to Bohr (i.e. to the atom-like structure of baryons) and Poland (the 7-th physicist). We can read about the Pleiades also in the Book of Job: “*Job 38:31 Canst thou bind the sweet influences of Pleiades, or loose the bands of Orion?*” but in many other sacred writings as well.

## 6. Conclusion

We proved that there are the unintelligible connections between religion and science. This suggests that our sub-consciousness has access to a cosmic knowledge concerning the Theory of Everything theory and Heaven.

The arrangement of the seven stars/”sisters” in Pleiades is imprinted on Europe and is associated with the theoretical physics – it is the proof that God exists and can be omnipotent. Just such miracle could not happen due to some random phenomena. Of course, our Cosmos could be created due to a random collision of big pieces of space. But because there is the proof of existence of God so we should believe in all fundamental religious dogmas. And the omnipotent God is the one of the fundamental dogmas. We should assume that omnipotent God fixed the initial conditions of the collision of the big pieces of space – via the inflation there was created the two-component spacetime (i.e. the Higgs field plus the Einstein spacetime) and there was created the stable timeless boundary of our Cosmos [2A]. God could survive the inflation in cosmic-capsule/Heaven surrounded by timeless shell.

God can manipulate the excited states of the Einstein spacetime i.e. the minds and the Principle-of-Equivalence matter. The imprinted arrangement of the 7 stars in Pleiades on Europe proves that God can do it.

The number correlations between the Revelation of St. John and the lacking part of ultimate theory, i.e. the Scale-Symmetric Theory, show without no doubt that God knows the ultimate theory. The correlations between religion and physics lead to conclusion that there are in existence the Heavens and the Hell ruled by God.

The 6 days of creation of the Universe by God is some analogy to the 6 parameters which define properties of the fundamental spacetime i.e. the Higgs field. The additional seventh day is some analog to the seventh parameter needed to describe properties of the Einstein

spacetime. Pieces of space from which consist all beings/things are made from the same medium.

We should emphasize that the prediction of the cataclysm in 2016 is correct only when the ancient knowledge deciphered by Albert Slosman from hieroglyphs and manuscripts and the new interpretation of the Maya number 1,872,000 are true. Notice as well that we do not know the present-day exact value of the up-down speed (probably it is about  $7 \pm 2$  km/s; calculated here value is about 10.8 km/s) and we do not know whether during the thousands of years there was continuity of the calendar.

The seventh point in Europe is distinguished so the Tajgete in Pleiades as well. The SETI should point its telescopes towards Tajgete because probably there is/was the first “house” of mankind. But we should notice that the fourth point is distinguished as well (it is because of the initials N.H.D. B.).

The Scale-Symmetric Theory points the fundamental mistakes in the mainstream cosmology and the mainstream particle physics.

The SQUARE-Theory is the God-Theory.
