Reaction less Drive by Anti Maxwell Dead Zone around a Wire.

Leo Vuyk,
Architect, Rotterdam,
the Netherlands

Abstract.
According to Quantum FFF Theory (Function Follows Form at the quantum level) the magnetic quantum field has always TWO different shaped monopole vector components: a North- and a South vector field component. This is comparable with the electric Quantum field, equipped with Plus and Minus vector components but it is in contrast with all other quantum fields like the neutrino- gravity- or x-gamma ray field.

After interference of the magnetic wave with a real spinning propeller shaped Fermion particle, TWO real monopole magnetic waves from opposite direction will collapse and come to life as two real rigid shaped photons, as the result of two individual mutated oscillating Higgs filed particles from the vacuum.

These photons should do the magnetic job by interlocking temporarily with the Fermion, and give the Fermion a push to the left respectively a push to the right fully in line and according to the Lorentz force law.

However, based on observation of iron powder patterns around wires, it is assumed that if these monopole particle/ wave dualities travel parallel to each other inside the Higgs field, (and not- as normal- in opposition due to the natural opposing curvature of the so called B field)

As a result, the magnetic field strength- created by the wire itself-locally drops down to zero, with a up to zero reduced Lorentz force on the iron powder atoms.

This is in contradiction with Maxwell’s magnetic field law around an electric energized wire and I call it the “tubular local magnetic dropping zone” (dead zone) around the electric wire, which can be used for reaction less drive propulsion and Levitation in combination with different forms of strong tubular or spiral magnets.

Magnet optimisation is suggested to form spiral configurations of high performance magnet platings with a spiralling electric coils in between.

The Lorentz force created on the wire by the static magnetic field of the tubular or spiral magnet (s) is supposed to be the only force in the system, by the absence of a reaction force on the magnet due to the local magnetic dropping zone.
Introduction.

Recently professor, Neil Turok said about the problematic understanding of our world of physics: “And so we have to go back and question those founding principles and find whatever it is, whatever new principle will replace them”. 
see: http://www.cbc.ca/radio/ideas/the-ultimate-simplicity-of-everything-1.3490322

By chance Quantum FFF Theory is based on some forgotten ideas of well known scientists.

It was Abdus Salam who proposed that quarks and leptons should have a sub-quantum level structure, and that they are compound rigid particles with a specific non-zero sized form. Jean Paul Vigier postulated that quarks and leptons are “pushed around” by an energetic sea of vacuum particles. David Bohm suggested in contrast with The "Copenhagen interpretation”, that reality is not created by the eye of the human observer, and second: elementary particles should be "guided by a pilot wave”. John Bell argued that the motion of mass related to the surrounding vacuum reference frame, should originate real "Lorentz-transformations", and also real relativistic measurable contraction. Richard Feynman postulated the idea of an all pervading energetic quantum vacuum. He rejected it, because it should originate resistance for every mass in motion, relative to the reference frame of the quantum vacuum. However, I postulate counter intuitive possibility, that this resistance for mass in motion, can be compensated, if we combine the ideas of Vigier, Bell, Bohm and Salam, and a new dual universal Bohmian "pilot wave", which is interpreted as the EPR correlation (or Big Bang entanglement) between individual elementary anti-mirror particles, living in dual universes. So my proposal is based on a Rigid String Theory with real rigid strings able to mutate and merge by form based interlocking.

See: http://bigbang-entanglement.blogspot.nl/2016/03/the-quantum-fff-theory-function-follows.html

Figure 1 Several sub quantum shaped particles suggested by Quantum FFF Theory.

Calabi Yau structures by the dual axis spin of Fermions, according to Quantum FFF Theory.
Anti Maxwell magnetic field reduction close to an electric wire.

Explained by detail observation of iron powder distribution (the ring shaped absence) around a wire or coil.
Below: Several observations and explanation by the curvature of monopole quantum information arrays.

According to Quantum FFF theory, all magnetic fields can be presented as DUAL Magnetic Monopole Photon Vector Arrays. These monopole arrays undergo curvature. As a result, the magnetic field intensity around the Earth and a wire is NOT dropping off with the square of the distance from the source! The field become stronger polarized away from the source (See images). Close to the current transporting wire the magnetic field strength is zero due to the parallel trajectories of North an South Photons before curvation and polarisation of iron powder (Author, Leo Vuy).
Examples of Anti-Maxwell reactionless anti gravity propulsion by a direct current coil wound around coaxial magnetized metal rods (see Big Basin Ufos and Sundara Vimana ancient Babylon).

Reaction less space propulsion principle based on a so called " Anti Maxwell zone" around a direct current in a wire. According to Quantum FFF Theory based dual (North and South) magnetic photon monopole model.
Additional information about Q-FFF Theory.

LHC 125,750+XXX GeV, Higgs presented as 3D Quantum knots.

According to Q-FFF Theory, the single Higgs vacuum particle itself is massless. However merger particles could for different Quantum Knots with various masses and shapes.

Figure 4, particle schemes of Quantum FFF Theory.
Quantum FFF Theory (Function Follows Form) is based on Non-Local Realism and Rigid String particles guided by dual copy-universal entanglement.

The new paradigm of star/galaxy formation and dying. Based on the new paradigm of Fermion repelling and creating black holes. Electric dark matter black holes seem to have the intelligence to pair by self propulsion with other BHs of comparable size to form Herbig Haro systems with star formation in between. (according to Quantum FFF Theory).

1. Black holes (BHs) are the same as Dark Matter, they all consume photons, even gravitons and the Higgs field, dark matter missions due to their proposed simple polarization away from the BH. They produce electric charged plasma.
2. Dark energy is the oscillating Calorize energy of the Higgs Field equipped with a tetradecagon lattice structure with variable Planck length around black holes.
3. Quantum Gravity = Dual Particle gravity-Attraction Higgs-Gravity opposing (Quantum point).
4. The Big Bang is a Glittering dark matter Big Bang Black Hole (BBBH), splitting into smaller Primordial Black Bang Spiders (PBBS) forming the first hom B-mass of energy and evaporating pando into a zero mass energy oscillating Higgs particle based Higgs field.
5. Dual PBBSs holographs, produce central plasma concentration to create Herbig Haro systems as a base for star formation in open star clusters as a start for Spiral Galaxies.
6. Space Galaxies will keep both Primordial Dark Matter Black Holes as Galaxy Anchor Black Holes (GABHs) at all distance.
7. After Galaxy Merging, these GABHs are the origin of Galaxy- magnetic field complexity and distant dwarf galaxies.
8. Black holes produce Plasma direct out of the Higgs field because two rigid mesons but unstable Higgs particles are converted into symmetric electron and positron or even dual quark-antiquark (positrons by RH horizon fluctuations).
9. The density of the opposing plasma lattice is the origin our material universe (proton-shaped positron merge perturbate ternary with quarks to form no quarks to form infogasm with electrons).
10. The first Supernovae produce medium-sized Black Holes as the base for secondary Herbig Haro systems and open star clusters.
11. ALL Dark Matter Black Holes are supposed to be CHARGE SEPARATORS with positive charge and one external globular charge to negative charged quark-electron plasma.
12. The light speed is related to gravity fields like the earth with long extinction distances to adopt with the solar gravity field.
13. Quantum FFF Theory states that the recipes shared multiverse in symmetric and instant entanglement as the so-called VORONOI BRIDGES (EV-BP) down to the smallest quantum level between different symmetric limestone universes. Nonlocal entangled down to each quantum and even deep space (ATS = Instantaneous Transmission System).
14. Large Primordial Black Bang Spiders (PBBS) are responsible for the creation of the Lyman Alpha halo and find spiral galaxy forming of this universe, but they seem to be also responsible for the implosion of the universe at the end in the form of Galaxy Anchor Black Holes (GABHs) located mainly outside galaxies. see. (Quantum Chanters source).
15. As a consequence of 12-14, time is always local time in combination with cyclic period time of the multiverse.
16. If our material universe has a closed left handed oscillating Higgs field, then our material right-handed DNA helix molecule could be explained. However it also suggests that in our opposing symmetric ANTI-MATERIAL, entangled negatively universal the DNA helix should have a Left handed stain.
17. According to Max Teegmark in an entangled multiverse we may ask is there COPIER absence over there, who is reading the same lines as I do?
18. This is the reason of the original addition to the oscillating homosynthesis Higgs field other, within about 1 cm distance from a fermion (see. Baez and Bergmann anatomy 1996).
19. Different elementary particles have different qualities by their different complex strings shape.
20. Photons and Neutrino particles have no pitch.
20. All particles can be converted to one or more Higgs particles, leptos Quarks can be compound particles.
21. All particles are assumed to be present as Higgs particles already in the cyclic Big Bang Black Hole (BBBH) after the former multiverse has collapsed into a Big Crunch Black Hole.
22. We seem to live (inside one material universal bubble of an instant entangled (Charge Parity Time) CPT symmetric multiverse bubble multiverse. Each quantum jump or even fundamental collapse or homogenization is guided by this instant entanglement at long distance.
23. If our material universes has a closed oscillating Higgs field, then our material Right Handed DNA helix molecule could be explained.
24. However it also suggests that in our opposing ANTI-MATERIAL, multiverse neighbour universe the DNA helix should have a LEFT HANDED stain.
25. According to Max Teegmark in an entangled multiverse we may ask is there COPIER absence over there, who is reading the same lines as I do?
26. This is the reason of the original addition to the oscillating homosynthesis Higgs field other, within about 1 cm distance from a fermion (see. Baez and Bergmann anatomy 1996).

Gravity direction dependent Lightspeed differences around the earth by ellipsoidal LASOF shaped frame dragging, measured even already by the LISA Pathfinder?

LISA Pathfinder should also be able to measure lightspeed differences outside the earth LASOF ellipsoid (according to Quantum FFF Theory).

Figure 7, Gravity dependent lightspeed anomalies.
Figure 7: Gravity direction dependent Lightspeed differences around the earth and the sun by ellipsoidal LASOF frame dragging, measured even already by LISA Pathfinder? LISA Pathfinder should also be able to measure lightspeed differences outside the earth LASOF ellipsoid (according to Quantum FFF Theory: Function Follows Form).
LASOF = Local A-Symmetrical Oscillating Frame.
See also: the O’Connell LASOF effect: [vixra.org/pdf/1409.0164v2.pdf](http://vixra.org/pdf/1409.0164v2.pdf)
See also: Since the LISA is also has also gravity direction anomaly equipment, the so called satellite FLYBY anomalies could come to more clarity.
Dayton Miller suggested already in 1925, that the altitude of lightspeed measuring above the earth surface (Mount Wilson) has a direct positive effect on the ether wind measurement results, which is in line with the LASOF ellipsoid drag area around the earth.

The cyclic Multiverse according to Q-FFF Theory.

The great Penrose High-Low Entropy misconception.
Big Bang and Big Crunch originated by the splitting pairing and recycling via merging of central galaxy S-nova black holes. According to Quantum FFF Theory.

Figure 8, The cyclic Multiverse with Entropy development in contrast with Penrose.
According to the Quantum-FFF model, (Function Follows Form) Microscopic Dark Matter (singularity black holes) are proliferated inside stars (sunspots), comets and ball lightning. Recent study (B. Harris) suggest, that also around earth an equatorial dark matter ring is present as the origin of the “Flyby anomaly”. However a DM equatorial disc located inside the earth (like sunspots) could solve the Flyby anomaly better and perhaps even the so called P-Wave shadow zone.
