### **Abstract**

A short essay that unifies electromagnetism and gravity with a 5-D system of natural units.

### **INTRODUCTION**

The magnetic flux quantum  $\Phi_0$  [1, 2, 3] is equivalent to

$$(1) \quad \Phi_0 = \frac{h}{Q_0},$$

where  $h$  is Planck's constant [4] and  $Q_0$  is the charge of an alpha particle ( $2e$ ).  
Planck's reduced constant  $\hbar$  is

$$(2) \quad \hbar = \frac{h}{2\pi},$$

which can be defined further as

$$(3) \quad \hbar = \alpha m_e r_B c,$$

where  $\alpha$  is the fine structure constant,  $m_e$  is an electron's mass,  $r_B$  is the Bohr radius, and  $c$  is the velocity of light in a vacuum. Combining Eqs. 1, 2 and 3, the electric and magnetic flux quanta can be unified with

$$(4) \quad 2\pi\hbar = Q_0\Phi_0 = 2\pi\alpha m_e r_B c,$$

which merges into

$$(5) \quad 2\pi\hbar^2 = Q_0\Phi_0\alpha m_e r_B c.$$

Bohr did not deduce his radius  $r_B$  from an alpha particle ( $Q_0 = 2e =$  a helium nucleus and not a hydrogen nucleus). The adjusted radius  $r_0$  for the helium system of natural units is defined by Eq. 5 and not by Eq. 3. The 5 dimensions of the system are balanced by the dimensionless constant C,

$$(6) \quad \frac{[2\pi] [\hbar(eV \cdot s)] [\hbar(kg \cdot m^2/s)]}{[Q_0(2e)] [\Phi_0(V \cdot s)] [\alpha] [m_e(kg)] [r_0(m)] [c(m/s)]} = \pi/\alpha = C$$

The modified version of Eq. 5 (including C and  $r_0$ ) is

$$(7) \quad 2C\hbar^2 = Q_0\Phi_0 m_e r_0 c.$$

The total angular momentum of an electron J [5] can be included with

$$(8) \quad 2CJ^2 = nQ_0\Phi_0 m_e r_0 c,$$

and the definition of the dimensionless unit  $n$  is

$$(9) \quad n = |\ell \pm s| (|\ell \pm s| + 1),$$

where  $\ell$  is the azimuthal quantum number and  $s$  is the spin quantum number.

## MATTER WAVES AND MASS-ENERGY

A particle's wavelength  $\lambda$  can be determined with de Broglie's matter wave equation

$$(10) \quad \lambda = \frac{h}{p} = \frac{2\pi\hbar}{mv},$$

[6] where  $p$  is the particle's momentum and  $v$  is its velocity. With the mass quantized in units of  $m_e$ , Eq. 10 can be expressed with the units of helium as

$$(11) \quad \lambda_0 = \frac{2\pi\hbar}{m_e v_0} = \frac{n\hbar Q_0 \Phi_0 \pi r_0 c}{v_0 C J^2}.$$

The electron's frequency quantum  $f_0$  can be deduced from

$$(12) \quad f_0 = \frac{v_0}{\lambda_0} = \frac{v_0^2 C J^2}{n\hbar Q_0 \Phi_0 \pi r_0 c},$$

and the dimensionally balanced version of de Broglie's matter wave equation is

$$(13) \quad n\alpha = \frac{\lambda_0 \nu_0 J^2}{\hbar \Phi_0 Q_0 r_0 c},$$

where  $\alpha$  is the fine structure constant again. The dimensionally balanced version of Einstein's  $E = mc^2$  is

$$(14) \quad (2\pi/n\alpha) = \frac{E Q_0 \Phi_0 r_0}{J^2 c},$$

and the energy of electromagnetic radiation ( $E_R = \hbar 2\pi f$ ) is simply the electric, magnetic, and frequency quanta,

$$(15) \quad E_R = Q_0 \Phi_0 f_0.$$

## CONCLUSION

Can Big-G be included in the helium unit system? Newton's gravitational constant  $G$  can be deduced from the Planck mass unit  $m_P$  [4],

$$(16) \quad m_P = \sqrt{\frac{\hbar c}{G}}, \quad G = \frac{\hbar c}{m_P^2},$$

but a coupling factor is needed for unification since  $m_P^2 \gg m_e^2$ . To nullify the Planck mass unit, we can use the Gaussian gravitational constant  $k$  [7],

$$(17) \quad k = \sqrt{G} = \frac{2\pi}{T\sqrt{M+m}},$$

where  $T$  is a secondary's period,  $M$  is the mass of a primary, and  $m$  is the mass of a secondary. Converting Eq. 17 into the helium units we get

$$(18) \quad k = \frac{2\pi f_0}{\sqrt{M_\phi}}, \quad 2\pi = \frac{Q_0 \Phi_0}{\hbar}, \quad k = \frac{Q_0 \Phi_0 f_0}{\hbar \sqrt{M_\phi}} = \frac{E_R}{\hbar \sqrt{M_\phi}},$$

where  $M_\phi$  is the mass of an alpha particle  $+2m_e$ . We can see that the Gaussian constant is proportional to a system's energy! With the mass unit set to  $H = \sqrt{M_\phi}$ , the relationship between gravity and electromagnetism can be expressed as

$$(19) \quad H \hbar k_0 = \Phi_0 Q_0 f_0!$$
