

Black-holes' Innate Character and Feature

Yibing Qiu

Abstract: show a viewpoint that regard to black-holes' innate character and feature

Main viewpoints and conclusions:

Chorus of black holes radiates X-rays

<http://phys.org/news/2016-07-chorus-black-holes-x-rays.html>

Black-holes is one kind of celestial bodies which having high composition matter density and high natural frequency, includes and such as neutron stars and pulsars.^{[1][2][3][4][5]}

Black-holes' natural frequencies are much higher than the frequencies of the all kind of visible lights; black-holes absorb visible light and store visible light in the form of thermal energy in them.

Black-holes are able to produce radiations, and their radiations are all high-frequency radiations (high-energy radiations).^[6]
