

Is it possible for a human to know ?

It might question mathematics axioms . Might it be hypothesis ?

It might be based on the fact that two elements might be be equal. Would it be ?

So, I might suggest, hypothesis as possibilities:

Riemann hypothesis might be true.

Navier-Stokes equations general solutions might be infinite.

P might be NP.

The Yang-Mills theory might be false.

Poincaré conjecture might be false.

Hodge conjecture might be true.

Birch and Swinnerton-Dyer conjecture might be true.

Light might be another expression or our pain to appease.

The nineteenth and the twentyfirst Mills' primes might be present online.

Peace might be prior.
