

## Space tsunami

Nikitin V.N., Nikitin I.V.

Exclusive hypothesis of the cause of a tsunami as result of emergence and movement of gravitational educations in the top layers of a cloak concerning the Earth's surface, solves also the mystery of existence of waves of the satellite of Saturn of Prometheus.

### Space tsunami

In translation from Japanese of "tsunami" "the wave in the harbor" means, that is tsunami are big and long waves which are formed thanks to impact on all thickness of water. The big storm wave also differs from a tsunami in it. Influence of a big storm wave happens only on a reservoir surface, and at a tsunami all thickness of water is affected. At a tsunami not one wave, and is most often formed a little which are thrown out on the land with a temporary interval of 2 minutes till 2 o'clock (fig. 2).

Fig. 1. Tsunami

Causes of a tsunami: underwater earthquakes when one part of a bottom falls, and another rises (about 85% of all tsunami), landslides (7%), volcanic eruptions (about 5% of all tsunami). However, exists and other exclusive hypothesis of the cause of a tsunami are a result of emergence and movement of gravitational educations in the top layers of a cloak concerning the Earth's surface. This hypothesis solves the mystery of existence of waves of the satellite of Saturn of Prometheus (fig. 2).
