

NOT TO RUSH ON SPACE IN VAIN

Nikitin V.N., Nikitin I.V.

The Universe is ordered and limited. Everything is simple, how in the textbook by physics: solar wind moves with acceleration from the center to borders of Solar system.

NOT TO RUSH ON SPACE IN VAIN

Acceleration of solar wind still remains to one of fundamental questions of science of the Sun. This old riddle is the reason of aspiration of NASA to explore the Sun. The probe "Parker" will also investigate two accompanying questions: why the atmosphere of the Sun hotter, than his surface and as high-vigorous particles leave a crown. Answers to these questions are very important for life on Earth. Failures in the atmosphere of the Sun can generate the huge explosions of the ionized gas called by emissions of coronal weight and the splashes in radiation known as solar flashes. However, according to exclusive hypotheses of emergence and evolution of the Universe and its objects the matters are quite explainable and solvable in terrestrial conditions. The Universe is ordered and limited. Galaxies have resulted from Galactic disintegration of the Universal White Hole. Objects of galaxies have also resulted from disintegration of Galactic White Holes. Solar wind as well as galaxies, moves with acceleration from the center to borders of Solar system. Everything is simple, how in the textbook by physics!
