

KAK SUPER-KASTRYULYA WITH BORSHCHYOM

Nikitin V.N., Nikitin I.V.

The Yellowstone volcano is not a volcano, but just huge abnormal power zone.

KAK SUPER-KASTRYULYA WITH BORSHCHYOM

According to scientists the tragedy of planetary scale can happen at any time. In Yellowstone National Park of the State of Wyoming (USA) the volcanic eruption just about can begin. Since March 28, 2018 in his territory 25 tremors are recorded already, new geysers are formed. Big groups the park is left by wild animals.

The Yellowstone volcano is not cone-shaped education with a muzzle. By the form it is the lowland called by volcanists a caldera which reminds the huge hollow. Yellowstone – not remarkable hollow, but the area of eruption of a huge volcano reaches several thousand square kilometers. However we have offered also alternative exclusive approach to this problem. The Yellowstone volcano is just huge pan (double boiler) with borsch. Pans, as we know, don't blow up, and борщок just puffs slowly.

Hypothesis 1: The Yellowstone volcano is not a volcano, but just huge abnormal power zone.

Fig. 1. Yellowstone volcano and its tasty analog

Hypothesis 2: The Yellowstone volcano can only "puff" slightly.
