2 x 7 x 73 x 293339 = the speed of light

<https://goo.gl/8xaFdZ>

Reference Frame” means no acceleration is felt , Gravitational or centripetal or otherwise

Meaning the impedance of the Vacuum is balanced at 376.730313462 ohms

Acceleration skews the Vacuum impedance away from 376.730313462.

Physical acceleration raises Z0

Gravitational acceleration lowers Z0

Impedance really would be better set to (376.73-376.73)

Set to zero, any acceleration would push Z0 away from Zero, plus or minus

$$(137.035999172^2 * (299792458) * 6.67399985e-11 + 1) / (c * (4e-7 * pi)) = 1$$

$$(((13.8863145783 \text{ billion light years}) / (380\,000 \text{ years})) / c) / 137.035999172) / 266.66666666 = 1$$

$$((((14.0111495 \text{ billion light years}) / (383516.866 \text{ years})) / c) / 137)^3 / (2^5) / (5^2) = 1$$

4. The cosmic microwave background (CMB) is the thermal radiation left over from the time of recombination in Big Bang cosmology. The CMB is a snapshot of the oldest light in our Universe, imprinted on the sky when the Universe was just 380,000 years old. Precise measurements of the CMB are critical to cosmology, since any proposed model of the universe must explain this radiation. The CMB has a thermal black body spectrum at a temperature of 2.72548(57) K. The spectral radiance peaks at 160.2 GHz.

$$(((13.8863145783 \text{ billion light years}) / (380\,000 \text{ years})) / c) / 137.035999172) / 266.66666666 = 1$$
