Sri Yantra and Panchadashi
The Dawn of Global Spirituality - II
Sai Venkatesh Balasubramanian

An earlier article had elaborated upon the foundations of a global spirituality, which seems to be the inevitable necessity of current globalized era. Rather than a new religion of sorts, this is simply a revival of the once flourishing Vedic spirituality, where the whole world spoke one language, was one culture, and had access to highest levels of thinking, attaining the ultimate human goal of blissful liberation - which amounts to knowing and abiding in the ultimate truth, as well as putting an end once and for all to all miseries in life. The article is here: http://vixra.org/pdf/1807.0322v1.pdf.

Known as Advaita, this spirituality is the essence of Vedas and Vedanta, which was represented in the tradition of Sri Vidya, seeing the Self or God as Mother Amma. The stages in the spiritual path of a person from mundane existence to liberation is seen in the sixteen lettered Panchadashi/Shodashi Mantra of Sri Vidya, which contains Upanishadatic essence of the four Vedas.

As that global culture gave way to individual cultures with different languages, Amma gave manifestations in these geographic regions as a means of access to the ultimate goal. Cults of worship developed around these manifestations, which we now see as religions. The correspondence of these 48 manifestations to the 16 stages are also highlighted in that article.

Following this introduction, the scope of present article is yet another facet of Sri Vidya: The Sri Yantra. This is a complex geometrical pattern of interlocking triangles, which is a form of Amma Herself. It is the most complete map of the universe ever drawn. The tradition of viewing the Sri Yantra is as layers or Avaranas, going from outward to inward, each enclosure going more subtle than the outer. There are nine such Avaranas, and traditionally worship is done in an order from outer to inner, known as Samhara Krama, or inner to outer, known as Srishti Krama.

However, the formation of the Sri Yantra is explained as the interlocking between 9 triangles, five downward facing and four upward facing,such interlocking creating a number of smaller triangles which constitute each enclosure. This means that the Yantra is simultaneous in nature, rather than progressive. For example, smaller triangles as components of the 7th and 4th Avaranas can both be traced to interlocking
of the same big triangles. This means, 7th Avarana is in no way more or less progressive than 4th.

The Sri Yantra is Amma Herself, and captures Her essence both in the transcendental Sacchidananda form, as well as the world and worldly forms as Her Leela. How is this possible? Understanding that the world is Maya, it is akin to a dream. Ramana Maharshi explains how in a dream, the moment you enter the dream, the entire dream world is created - there are no stages of creation. You see it and it is there - this is called Drishti Srishti. So it is, with the physical world, which is an illusion of Maya. However, for those not advanced enough to grasp this truth, the hierarchical order of creation is given, as a way to satisfy their curiosity - such an order is called Krama Srishti.

In essence, Krama Srishti is an illusion, whereas the world is in reality Drishti Srishti. Reflecting this, in Sri yantra, the simultaneous interlocking of triangles is the reality whereas Srishti and Samhara Kramas are simply illusions. All Avaranas exist at the same time.

How to understand the Sri Yantra? In essence the entire Yantra represents an individual, a unit, with the various Avaranas being various components. For example, take a human being - this is an individual unit of creation. What are its components? On first glance, one might apportion the body into face, hands, legs, torso etc - structural way. But, such a view is primitive and highly lacking in knowledge, and one cannot perform any function such as medicine based on this view. For example, the inner organs and their functioning are not sufficiently captured, and some inner systems, for example digestive may involve more than one of those structural components listed.
A better way to do this would be functional, based on various functions performed within the body, and grouping those related organs. This would be circulatory, respiratory, digestive, nervous etc. The success of such grouping is seen in today’s medicine and healthcare - we see specialised practitioners pertaining to each of these systems. The Avaranas of the Sri Yantra are similar - they describe the universe in functional roles rather than structural.

At the cosmic scale, the Sri Yantra describes the universe as Brahmanda - not as stars, galaxies and nebulae, but as various functions that are performed in nature and the cosmos, as a result of Divine Will. What is in the Brahmanda, the macrocosm is also in the Pindanda, the microcosm. This is nothing but the human body, which by itself is a miniature reflection of the universe. The components of Sri Yantra explained in the context of Pindanda, forms the contents of the Bhavanopanishad.

In the Varivasya Rahasya, Bhaskararaya has explained how the various Avaranas of the Sri Yantra may be derived from the Panchadashi Mantra. This article explores and elaborates on that mapping. The connection between the Avaranas and Panchadashi is studied in context of the corresponding spiritual stages, as well as the 48 manifestations covered therein. In conclusion, one can understand that the 48 manifestations not only provide a complete picture of the spiritual path, but also form a complete picture of the entire universe, both in macrocosmic and microcosmic respects.

Traditionally, the Sri Vidya Avarana Puja Vidhis for the Navavaranas invoke the various Devatas of each Avarana, each of the invoked through their Bija Mantras or seed Mantras. The innermost two Avaranas simply use the Sri Vidya Bija, while the outermost uses Pranava Om. Avaranas 2, 4, 5 and 6 are seen using the 50 letters of the Sanskrit alphabet, or Aksharas to invoke each of the Devatas. However, the eight Devatas of Avarana 3 are invoked using Akshara vargas, and the eight Devatas of Avarana 7 are invoked using seemingly unpronounceable Bija Mantras.

It is here that Mahaperiyava’s talk is reinforced, where He clearly emphasises that the Vedic language is the source language for Sanskrit and Tamil, and that all languages of humanity evolves from the Vedic language (See appendix 1). He also mentioned how certain letters not seen in Sanskrit, but in Tamil and other languages, such as zha, f, q and the Aytha Ezhuthu, were all present in the Vedic language.

Sri Vidya being the Vedic essence, it is only natural that when Aksharas are invoked, they would cover all Aksharas of the Vedic language, and not just the 50 of Sanskrit. Of course the Vedas mention how the extra Aksharas may be seen in various Sandhi and
pronunciation rules pertaining to the 50. Thus, one might presume that the Bijas of the 3rd and 7th Avaranas also invoke these extra Aksharas. Thus, in this article, while giving Aksharas for each of the Avarana Devatas, these extra Aksharas are given pertaining to the two Avaranas. Also, each of the Akshara Vargas may be pronounced as clicks, rather than voiced alphabets, and these form the substance of the 3rd Avarana. Once in Vedic language, one can find them today mostly in KhoiSan languages of Southern Africa. In this way one derives the total number of Aksharas to 66. Excluding the prodelisive, one gets 65, which is an often mentioned number for the number of Shakti Peetas.

The Avaranas are generally elaborated in their order from innermost to outermost, in the following sections. However, for the sake of convenience, the Bindu or singularity, which is the ninth Avarana, is explained last.

**Sarvasiddhiprada and Sarvarogahara Chakras**

The eighth Avarana consists of the central triangle in the Sri Yantra. The three vertices are three Avarana Devatas Kameshwari, Vajreshwari and Bhagamalini. According to the Bhavanopanishad, these represent Avyaktha, Mahad and Ahankara, which are three levels of existence as unmanifest, glory and individualized respectively. This also represent the stages of desire, planning and materialization toward achieving any given objective. The end result is successful accomplishment of objectives, and hence the Avarana is named Sarvasiddhiprada. This Avarana is mapped to the Akshara Ṣ (Shreem), also in its triple form as the Bala Mantra.

As much as proper planning and materialization is important, it is also equally important to weed out the negativities while attempting to achieve something. This is the scope of the seventh Avarana, which consists of 8 triangles representing 8 Vak Devatas. These pertain to various dichotomous notions such as Pleasure-Pain. This is known as distinction or Bheda, and is the result of the mind perceiving things in a certain way.

This Bheda creates the notions that conditions are favorable or unfavorable, and these preconceived notions affect the thoughts and actions. This can be an impediment to success. For this reason, these dichotomies are termed Rogas, and removing of these is why this Avarana is called Sarvarogahara Chakra.

These two Avaranas together consist of nine triangles, and Bhaskararaya maps them to the three Maya Akshara Hreems, in the Panchadashi as the 5th, 11th and 15th letters. The syllable Hreem consists of three Yoni Bijas, namely the Saparardha Kala ‘H’, the
Kamakala ‘Ee’ and Nada-Bindu-Kala ‘M’. Thus in total, the three Hrims contain 9 Yoni Bijas, and these are the 9 triangles.

Of these, the three Devatas in the 8th avarana triangle, and first two triangles in 7th Avarana consist of cold-heat duality represented by Surya-Chandra Nadis, and three levels of manifestation of the Self or Atman. These 3 triangles are therefore mapped to Nirguna Sacchidananda manifestation in the 15th letter, representing the SadGuru Paduka.

The next three triangles in 7th Avarana correspond to mind as desire, pleasure, pain. These pertain to the mind, which as Ramana Maharshi says, is the equivalent to Prana, both having the same source. Consequently, the 11th letter in Panchadashi is mapped to these 3 triangles, where the manifestation is Hanuman, the monkey God, monkey representing the mind, and who is son of Vayu, representing life-force Prana.

The final 3 triangles in the 7th Avarana correspond to three modes of operation, called Tri Gunas, which are related to the threelfold operation of creation, preservation and destruction. These are mapped to the Yoga manifestation as the 5th letter, represented by Digambara as Kala Bhairava, and Adinatha Rishabhadeva.

Each of the triangles in the seventh Avarana is mapped to certain Bija Mantras, which are seen as unpronouncable, such as Klhreem, Hslvyoom, Nvleem etc. However, these are simply Sanskrit approximations of certain Aksharas, which were once there in vedic language, but was deleted in the later Sanskrit. However, other languages, also descended from Vedic, such as Tamil preserve these Aksharas.

**Sarvarakshakara Chakra**

The sixth Avarana consists of the 10 Agnis. These are internal fires related to various kinds of combustion, including what is viewed as the digestive system. But, from a broader perspective, the combustion involves absorbing and internalizing various objects outside one’s self, thus adding it to one’s value and system. A special case of this is appropriate handling of obstacles, converting them into favorable entities and internalizing them. For this reason, the Avarana is known as Sarvarakshakara, or protection, from factors outside oneself, which are the obstacles.

A concept highlighted in such handling is the fact that obstacles cease to exist as such, whereas the system internalizing them outlives it. This is a representation of the concept of “eternity” or Anantham Brahma, seen in Panchadashi as the 9th letter Ha by Shakti manifestation. The most famous form is Durga, meaning impenetrable fortress, which again highlights the Rakshakara aspect.

In Sri Yantra, the Avarana is the enclosure seen as the inner set of ten triangles, similar in appearance with the 5th and 4th Avaranas seen as outer 10 triangles, and 14 triangles respectively,, and the Panchadashi Aksharas for the three are the 6th, 9th and 2nd namely Ha, Ha and E. Bhaskararaya says these are the Akasha or Vyoma letters. This is because, the three enclosures represent the three major systems - digestion, respiration and circulation, which provide the framework for operation of the body, just like Akasha as etheric space is the framework for the other elements of nature.

Within the Avarana, the 10 Agnis are mapped to various manifestations within Shakti. The first, Rechaka, corresponds to exhalation, i.e. life breath Prana itself, which is the very sign of eternity, as Gorgon or Adya Shakti Maha Kali. The next four denote handling of obstacles using progressively denser methods, corresponding to Kali progressively manifesting in worldly aspects of creation, as Atabey, Wuagyl Ngalyod, Inanna and Earth Goddess Thorani. The last 5 Agnis represent breaking down in densities progressing from high to low. This corresponds to Durga, who in the fully
manifest world, represents immense capabilities in utilization of such resources, so that one moves forward from states of everything back to states of nothing, which is again Kali, seen as the Tenth of the Agnis.

**Sarvarthasadhaka Chakra**

The fifth Avarana consists of the Ten Pranas. These are life-forces, which includes what is known as breath. Thus, this is the respiratory system, including not only the breath that sustains life through the lungs, but also various other gaseous movements responsible for digestion, decomposition etc. Ramana Maharshi has emphasized how Prana and mind have the same source, and controlling one amounts to controlling the other. Thus, this Avarana must be seen not just as respiration, but also regulating various thoughts of the mind. History is proof that it is through the mind power alone, that man has outperformed every species in this world, and has conquered land, water, air and even space. Thus, the Prana and mind are seen in the context of accomplishment and achievement, which is why the Avarana is named Sarvarthasadhaka Chakra.

While accomplishment is in general a good thing, the end objective of human life must always be kept in mind - it is to get liberated from the world, which is nothing but a
delusion. This can be done only through Jnana or wisdom, and the mind can grasp this only if it is unblemished and pure. Purifying the mind comes through one’s deeds or Karma, performed aligned to Dharma or righteousness, ethics and morality. In the Panchadashi, the second letter E, being an Akasha or Vyoma letter as mentioned above, is mapped to this Avarana. The manifestation for this letter is indeed Dharma.

This manifestation is characterised by four forms - Yahweh, Kukumatz, Tengri and Atua, each depicting a different facet of Dharma. Yahweh denoting the Sefirot, which are emanations of God as righteousness - He rewards “good” ie deeds that take one toward Him, while punishing “bad” - deeds that make the mind impure, taking one away from Him. Atua represents the duality thus created, between a material realm ‘earth’ characterized by rebirths, and a spiritual realm ‘sky’ of liberation. The feathered serpent Kukumatz combines these aspects and represents movement upward or downward in these realms. Finally, Tengri is the overarching supervising God, looking down at the man in the center of the latter’s world, which ultimately is an expansion of the mind. So also, the ten Pranas are mapped to these based on their quality.

</tbody>
</table>
Sarvasaubhagayadayaka Chakra

The fourth Avarana consists of the 14 Nadis. These are channels in the body for circulation of energy. Thus, this includes the modern parlance of circulatory and lymphatic systems, while also including within its fold, the energy body, seen as Kundalini in the Yoga, traversing from the root or coccyx to the crown in the head, through Sushumna the spine channel, as well as its companions Ida and Pingala, commonly called Chandra and Surya Nadis. Scientifically, energy is the capacity to do work. Thus, it is seen as stored capability, or treasure or fortune that can be called on demand to achieve intended objectives. Thus, the Avarana gets the name Sarvasaubhagayadayaka.

The Avarana is mapped to sixth letter Ha in the Panchadashi, corresponding to Skanda manifestation. Various called in Eastern medicine as Prana and Qi, is the fundamental life force, that circulates through these Nadis. This Life-force is of the nature of Brahman itself. Thus, it has all the characteristics of Brahman, such as Truth, Bliss, Love and Beauty. Among the 16 stages, one sees this quality highlighted in the Skanda manifestation, as the first-hand experience of God through Savikalpa Samadhi, driving one towards Mumukshutva or intense Thirst for Liberation.

Among various manifestations of Skanda mapped to the Nadis, Nlari represents the very bliss and ecstasy of the Samadhi as a neural euphoria, while Subrahmanya represents the primary life-force of the Sushumna, flowing through the three pairs of Ida and Pingala companion Nadis, represented by His six faces. Ahura Mazda represents the mental clarity that one gets after Samadhi, determining one’s way forward through correct perspective and correct decisions.

</tbody>
</table>
The third Avarana consists of eight petals, representing eight actions. These are various actions performed by the physique and psyche. In medical parlance, these involve various systems, such as muscular, skeletal, as well as psychological thought processes. The common factor to all of these is that actions cause change in status quo. It is a disturbance from inertia, and thus an excitation. Thus, the Avarana is named Sarvasamkshobhana Chakra.

On the one hand, when actions are performed, it must be performed aligned to making oneself pure, technically called Sattvic or Sattvapatti. At the same time, one must understand the scope of actions, as completely within the overarching dominance of Divine Will. Ultimately, the notion of freewill is a delusion, as much as the notion of the physical world as a reality, both being the effect of Maya. Among the 16 stages of the Panchadashi, the one highlighting Divine Will and Sattvapatti, is the 12th letter Sa, which is the manifestation of Vishnu.

There are three manifestations of Vishnu - Dashavatara represented by Krishna, Apollo and the Amun’s Ankh, which highlight various facets of Divine Will. Krishna, the divine enchanter is the attraction of mind as an addiction toward Nirvikalpa Samadhi, which is slowly channelised towards understanding the nature of Divine play. Apollo represents the dominance of Divine Will in the physical world, while Ankh represents an assurance, a promise of liberation once one surrenders to the Divine Will. Accordingly, the actions in the Avarana are mapped to these three.

Sri Yantra and Panchadashi 10
This Avarana and the 2nd, are both similar in appearance, with 8 and 16 petals respectively. In the Panchadashi, Bhaskararaya maps these to the 2 Shakti Aksharas or Sa, seen as the 7th and 12th letters. This is because, these Avaranas describe an individual in the physical realm, using the various circulatory, respiratory systems etc to perform tasks operating on the physical level.

For 8 petals of this Avarana, Puja Agamas mention the 8 Vargas of Aksharas - A, Ka, Cha, Ta, Tha, Pa, Ya, Sha. These are in reality, the 8 click and unvoiced sounds that were originally in Vedic language, but non-existent in classical Sanskrit. But, since as per Maha Periyava, Vedic language is the mother language of all languages in the world, one can see the clicks in the KhoiSan family of languages in Southern Africa. It is noteworthy that the distinction between plosives, aspirates, voicings and nasals does not exist clicks. Thus dental plosive त, aspirate थ, or voiced त when converted to clicks, all result in the same /|/ dental click. This is why these are mentioned as clicks, each for the 8 Vargas, rather than for individual Aksharas.

Sarvashaparipooraka Chakra

The second Avarana consists of 16 petals. Bhavanopanishad says that these represent the five sense organs (eye, ear, nose, tongue, skin), the five action organs (speech, grasp, locomotion, excretion, procreation), the five elements of nature (earth, water, fire, air, space), and mind. Thus, one can see that, in contrast to systems such as circulatory or respiratory spread throughout the body, this Avarana is the collection of specialized organs, each with its own purpose and task. Appropriate use of these facilitates achieving desired objectives. For this reason, the Avarana is named Sarvaashaparipooraka Chakra.

The essence of this Avarana is how an individual, built up of many systems, manifests the life-force in specialized organs, for special purposes. In Divine parlance, this can be seen as God’s play, where God, of the nature of Truth, beauty, love, bliss and compassion, involves in certain circumstances, enacting various deeds of play called Leela. Among the Panchadashi, the letter that represents this Leela aspect is the 7th, Sa which is the manifestation of Surya, and that is mapped to this Avarana.

The manifestations of Surya are seen in various levels. Suryanarayana represents the Leela aspect transcending space and time. Inti represents Sun as fire of truth and love in the heart, a non-physical level. Ukko, Mari and Saub represent Leela in the aspects of Ishwara, Jagat and Jiva respectively.

**Trailokyamohana Chakra**

This Avarana, the first, consists of three concentric square shaped enclosures, called the Bhupura. The threefold nature of this Avarana represents the emotions, afflictions and elements of nature respectively. Together this represent the individual’s position in the visible physical world, interactions with other individuals, as well as inanimate things like various components of nature. The objective of all these is that one brings circumstances under control, conducive to achieving one’s objectives through interactions with animate and inanimate entities. For these reasons, the Avarana is named Trailokyamohana Chakra. The Akshara mapped to this Avarana is ॐ (Om), the Pranava Mantra. Bhaskararaya maps the three layers of this Avarana to the three La letters in Panchadashi - the 4th, 10th and 14th letters. These three are Prithvi Aksharas, as in they represent down-to-earth involvement in materialistic level, unlike other Aksharas such as the Akasha ones.

The outermost layer consists of the 10 Siddhis - Anima, Laghima, Mahima, Ishitva, Vashitva, Prakamya, Bhukti, Iccha, Prapti and Sarvakama, which as per Bhavanopanishad denote the nine emotions or Navarasas, plus Niyati. On the one hand, Siddhis are supernatural powers that are used to make circumstances favorable, while on the other hand, emotions denote states of mind at given moments of time, that affect the entire physical and psychological setup and associated actions. It is a well known fact that Ganesha is the Lord of the Siddhis, and so this manifestation, the 4th letter La in Panchadashi is mapped to this layer. There are three manifestations of Ganesha - as Vinayaka, Dzil Diyini Diigosini corresponding to aspect of the 4 Vedas and Bu Luotuo as Prajapathi Brahma. These are mapped to the first 4, next 4 and last 2 Siddhis respectively in the above mentioned list.
The middle layer consists of the 8 Matrikas - Brahma, Maheshwari, Kaumari, Vaishnavi, Varahi, Mahendri, Chamunda and Mahalakshmi. These denote the removal of the eight affictions respectively as lust, wrath, greed, delusion, pride, envy, and notions of merit and demerit. On the one hand, these affictions lead a person to unrighteous actions and sin, or Adharma, while controlling these would lead one to have firm mastery over the circumstances, whereupon right decisions can be taken and success achieved. Both these aspects are seen in the manifestation of Dharma Sastha, which is the Nirguna Guru as Ek Omkar. Thus, this layer is mapped to the 10th letter La in Panchadashi.

The innermost layer contains the ten Mudras - Samkshobhini, Vidravini, Akarshini, Vashankari, Unmadini, Mahankusha, Khechari, Bija, Yoni and Trikhandha, which the Bhavanopanishad states, represent the wheels of energy or Chakras - Muladhara, Svadishrana, Manipura, Anahata, Visuddhi, Ajna, Akula Sahasrara, Kula Sahasrara, Indrayoni, and their Samashti. Mudras are various worship and healing gestures performed with the hands. The fingers are said to represent the five elements of nature - earth, water, fire, air and space. Consequently, the Mudras are seen as regulations of the five elements within oneself and the immediate surroundings. This is another aspect of making conditions conducive to achieving objectives. Shiva, in His five-faced form, is seen as Bhooteshwara or Lord of the five elements. Accordingly, Lord Shiva, the manifestation of 14th Letter La in Panchadashi, is mapped to this layer.

**Sarvanandamaya Chakra**

The ninth Avarana, which is the innermost singularity, called the Bindu, is the very residence of Amma as Lalitha Maha Tripurasundari. Her very nature is bliss, hence the name Sarvanandamaya. The Akshara of this Avarana is मीं (Shreem).

Particularly, this Avarana represents the bliss of Lalitha Ambika in Her pure, Nirguna form as Sacchidananda, as well as in Her Leela aspect of playing with the world. This can be experienced fully only in the Jeevanmuktha stage of a person. Though beyond all Aksharas and all stages of spirituality, for purposes of Leela alone, Amma manifests certain aspects in the world. In this connection, Bhaskararaya maps this Avarana with four letters in Panchadashi - the three Ka as 1st, 8th, and 13th letters, and Ee as 3rd letter.

The explanation is that the three Ka letters are taken from the three Kutas or components of Panchadashi and stand for Jnana Iccha and Kriya respectively.

Of these the 1st letter Ka denotes Jnana Shakti aspect, in the manifestation as Allah. Primarily, this amounts to knowing about the nature of Brahman, which forms the basis
of spiritual progress. Allah as the Samashti manifestation of Jnana, can also be seen as seven individual manifestations, known as the seven Saraswathis - Neela, Ghata, Jnana, Kini, Antarksha, Chintamani and Maha Saraswathi. These correspond respectively to Dela Malx, Silla Inukshuk, Gitchi Manitou, Afekan, Pulga, Ogun and the Baha.

The second Ka, ie the 8th letter denotes Iccha. This is God’s Will as the sole driving force behind all Leela and creation, whereas the same Iccha as compassion, is the driving force by which the Divine descends to reveal the truth, taking a person out of Maya and into liberation. This is seen as three manifestations of the 8th letter. Buddha Dharmakaya is the very form of truth and enlightenment in Karana Sharira. Kunzang Gyalwa Dupa Avalokiteshwara is the Karunya or compassion in Sookshma Sharira, leading towards enlightenment. The actual physical process of enlightenment is the result of fulfilment of a Divine Promise, and this is Mitra or Maitreya Buddha in the Sthula Shareera.

The third Ka, ie 13th letter denotes Kriya. Understanding that God’s Will alone prevails, will result in understanding that every action from the beginning of time was done by God alone. So too, the entire spiritual progress is made by God alone through Divine Will. This is what Jesus Christ, the manifestation of the 13th letter symbolises. Surrendering to Divine Will, one sees that Ahankara or ego is killed, which is that the crucifixion actually signifies, as explained by Ramana Maharshi.

The third letter Ee as the Kamakala Bija denotes Lalitha Ambika as the union of Purusha Prakriti principles as Kameshwara and Kameshwari. This is the manifestation of Tao Yin Yang. However, the manifestation of this 3rd letter have 4 more forms, each signifying one aspect of Lalitha Ambika.

The Brigid Danu Triskele represents Amma in triple manifestation as maiden, lady and crone ie Bala, Sundari, Bhairavi. So also, the triality in Mitsu Tomoe represents Amma’s Lila in three realms - Jiva, Jagat and Ishwara.

The Tupa manifestation as word soul, represents Amma as the Aksharas or fundamental modes of energy. This in essence is the concept of Mantra, representing Mantrini or Raja Shyamala Mathangi, who is the Counsellor in Amma’s court.

The Babakoto manifestation represents Pitrus or ancestors, as the carriers and disseminators of wisdom. Also, the most primordial of these, the king of Pitru world is Yama, the God of Death who is also the maintainer of Dharma. He is the punisher or

Sri Yantra and Panchadashi 15
Dandana for the unrighteous. In these respects Babakoto represents the parental father-mother figure in Sri Vidya as Varahi-Kurukulla, seen together as Dandanatha Maha Varahi, who is Commander in chief of Lalitha Ambika’s court.

Mantrini and Dandanatha have deeper significances too. They represent the sugarcane bow and flowery arrows respectively seen in Amma’s hands, which in turn represent controlling the mind, and the five senses.

APPENDIX 1: Mahaperiyava on Sanskrit, Tamil and Vedic languages

Narrative 1: Experiences with Maha Periyava: The Oldest Language in the World

When I went to the Kanchi Mutt to have the darshan of Sri Maha Periyava, there were four foreigners there, an Israeli, an Italian, a German and a British. They had come to do their PhD in Philology on the topic of ‘the most ancient languages in the Occidental and the Oriental world’. They were studying Latin, Hebrew and Greek languages in the Occidental part and Sanskrit and Tamil in the Oriental part.

Maha Periyava was in his private quarters, performing His Nithya Karma Anushtanas and elaborate poojas; they had waited and desired to take a photo of Him but His kaingaryams refused permission. They were heartbroken that they could not take a picture. All the four of them were standing near a tree since morning waiting for Periyava to finish his poojas and give darshan. They asked His sevakas when He would be done with the poojas but got an unconvincing reply.

I told the foreigners that we Indians are used to the way of life at the Mutt, but how had they all been standing for the past 6 hours? One of them looked at his watch and exclaimed, “Oh my God, has it been 6 hours? He is a Man of Certainty and is Beyond Time!”

Maha Periyava came in after 10 minutes and we all went and prostrated before Him. Looking at the man (who had the camera hanging around his neck) who had wanted to take the photos, He gestured with His hands that he could take the pictures now. He posed for three photos and stopped him before taking the fourth.

"Why have you all come here and what is the purpose of your visit? ”, asked Periyava.

"We have visited many places regarding our research on the most ancient language".

Periyava asked, "So, did you arrive at a conclusion as to which is the most ancient language?"

The Israeli replied, "Hebrew is the most ancient in the Occident; but in the Oriental, people say that both Sanskrit and Tamil are the oldest, but we are confused and that is why we are here for Your opinion".

Periyava said, "There is another language which is more ancient than all these, it is the Vedic Language. It is the source of even Sanskrit and Hebrew."

"There is a verse about rebirth in Hebrew, can you recite it completely?" asked Periyava to the Israeli by giving the man the first two words.
The Israeli recited it for 3 to 4 minutes. Periyava looked around and asked some boys, “You have all learnt Rig Veda, can you recite this particular verse? He suggested some mantras to the boys.”

Those boys recited the Veda Mantras for 5 minutes.

Periyava then addressed the Israeli “Did you understand what these boys recited now?”

The four men remain quiet.

Maha Periyava smiled and turned to the boys and said "You all will definitely not understand what this man had recited in Hebrew!"

He then turned to the Israeli and said, "What you have chanted before is the same as what these boys have chanted!"

The 4 foreigners were stunned and did not know how to respond. Maha Periyava told them that he could prove it and asked for a paper and a pen.

"In Vedas it is mentioned that the world has been classified into 32 portions/regions. And in each of the 32 geographic regions, Vedas say how the Veda Aksharas have changed/got pronounced in those places!"

He asked each of them which region they came from and then explained to them how a particular Veda Aksharam got changed in their individual places! He asked the boys to recite a verse from Rig Veda again and told the men how each Aksharam in Rig Veda in that verse would sound in their Regions!

The Sarveshwaran then said, "I will now recite this verse with some difficulty as it has been a long time since I had Abhyasam and the Mahan started to chant the mantra slowly, slightly differing from the basic shloka aksharam so that it matched how it would sound in Hebrew. After he recited the aksharams he asked the Israeli if he understood the recital of the mantra and aksharam and observed any familiarity.

To the boys who recited the Vedas, He said, "I will now recite it in a slightly different form based on how each Aksharam will sound in Hebrew. Please do not think it is wrong; there is this injunction in the Vedas that it can be recited this way also."

To everybody's astonishment and surprise, the Israeli started to recite in Hebrew what Maha Periyava exactly chanted- the aksharas in a modified form, as it resembled the Hebrew language. The Israeli therefore chanted it together with Him!!!

We were all stunned!!!

After this demonstration Maha Periyava addressed everyone assembled there, "I told you earlier, the same verse in Rig Veda is present ditto in Hebrew, but the Aksharas have changed slightly. (As we say Yamuna but in the North it is Jamuna, Va in the south is Ba in West Bengal, Paa in Tamil is Haa in Kannada etc). Therefore, the most ancient language in the world is the Vedic language!"

Maha Periyava then asked for paper and pen to be supplied to the four men in order to prepare a table and fill it with how the Rig Veda Aksharams sounded in their language. This was completed in 15 minutes.

The Israeli was shocked and exclaimed, "This is something unimaginable!"
Periyava asked him, "What do you think now, do you now agree that everything has sprung from Vedas?"

The look on the Israeli’s face was not convincing.

Periyava quipped, "What, Are you thinking why could Vedas not have originated from Hebrew?"

The man said, "Yes, it could have been the reverse also, the Vedas could have come from Hebrew".

Periyava replied smilingly, "You only have the lock, whereas we have both the key and the lock! It is even mentioned in the Vedas as to which Maharishi from here in India went to your region and spread/taught Vedas in Israel!"

The man was fully convinced in the end that the Vedic language is indeed the oldest and the most time honoured.

(Translated from Thiruvannamalai Shri Gowrishankar’s Tamil video interview)

**Narrative 2:**

All Sounds are in Sanskrit

Sanskrit has got all phonemes (sounds). In fact there is no sound vocalised by humans that is not present in that language. It has the f sound. ‘Zha’ is not, as is usually imagined, unique to Tamil. It exists in the Vedic language which is the source of Sanskrit. The ‘da’ in the Yajur Veda has to be pronounced as zha in the corresponding page in the Sama Veda. The three dot symbol ‘Aytam’ is present in Sanskrit also. There is a Panini sutra ‘h kap pauc’. According to it if a visarga comes before a word beginning with ka (Ramah + Karunakarah), it will not have the h, as mentioned before, but of h as in aytam. Here it is the visarga that is the aytam that becomes the f before pa-kara.

What Tamils call ‘kutriyalukaram’, is present in Sanskrit also. In Sanskrit the vocalic ‘r’ and ‘l’ are not included among the consonants, but regarded as vowels.

There is no short ‘e’ or ‘o’ in Sanskrit. I felt this to be a minus point. On going through Patanjali’s commentary on the sutras of Panini, I discovered that Sanskrit too had these short vowels and it was a comforting discovery. Patanjali says that, in chanting the ‘satyamugri ranayaniya sakhas’ of the Sama Veda, the short e and o are used. Thus Sanskrit embraces all the sounds it has also a script in which the sound of every letter is determined with utmost accuracy.

Page 294/295 Hindu Dharma

As the language of the gods it brings divine grace. The sounds of Sanskrit create beneficial vibrations of the ‘nadis’ and strengthen the nervous system, thereby contributing to our health.

Sri Yantra and Panchadashi 18
Narrative 3:

A Language that has all Phonemes (HinduDharma: Siksa):

From the foregoing it is clear that Sanskrit has the "f" sound. In fact there is no sound vocalised by humans that is not present in that language. "Zha" is not, as is usually imagined, unique to Tamil. It exists in the Vedic language which is the source of Sanskrit. The "da" in the Yajurveda has to be pronounced as "zha" in the corresponding passages in the Samaveda. In the Rgveda also in some places the "da" has to be similarly pronounced. The very first word in the first sukta of the Rigveda, "Agnimile", has to be pronounced almost as "Agnimizhe" - not a full "zhe" for "le", but almost.

There is a sound very close to "zha" in French. But neither in that language nor in Sanskrit is there a separate letter to represent that sound. "Ja" and "ga" serve the purpose of "zha" in French. In Sanskrit "la" serves the same purpose (I am told there is "zha" in Chinese. )

The three-dot symbol in Tamil, called "aytam", is present in Sanskrit also. There is a Panini sutra, "h kap pauc". According to it, if a visarga comes before a word beginning with "ka"(Ramah + Karunakara), it will not have the sound of "h", as mentioned before, but of "h" in the "aytam". Here it is the visarga that is the aytam that becomes the "f" before "pa-kara".

Ramah + panditah =Rama f panditah. This "f" sound is called "upatmaniya". "Tma" suggests the sound created by blowing the pipe to build the kitchen fire. When you blow thus you get the "f" sound. The initial letter of the English word "flute" is "f", is it not?

One more point about "fa". We generally pronounce "fa" as "pa". But it would be wrong to think that we[ in the South] pronounce coffee as "kapi" in the same way. In Sanskrit "kapisa" means dark brown - that is the colour of coffee powder. Our kapisa is the white man's coffee.

What Tamils call kurriyalukaram is present in Sanskrit also -r and l. People write both "Rigveda" and "Rugveda" - the first letter of the word is neither "Ri" nor "Ru". It represents in fact the Kurriyalukara sound. It is between "u" and "i". We write "Krishna" in Roman. In the North some people write the same as "Krushna". It is amusing to listen to Andhras pronouncing "hrdayam" as "hrudayam". Both the "ra-kara" and "la-kara" of Sanskrit have vocalic forms. But in "la-kara" the vocalic form comes only in conjunction
with another consonant. In the ra-kara vocalic form we have examples like "Rg", "rsi"; in the "la-kara" vocalic form we have "klpta".

In Sanskrit the vocalic "r" and "l" are not included among the consonants but regarded as vowels: a, a, u, u, i, i, r, l, e, ai, o, au, am, ah.

There is no short "e" or "o" in Sanskrit. I felt this to be a minus point for that language. Parasakti, the Supreme Goddess, is the personification of all sounds. So should there not be all sounds in a language (like Sanskrit)? Why should it lack these two sounds (short "e" and short "o")? On going through Patanjali's commentary on the sutras of Panini, I discovered that Sanskrit too had these short vowels and it was a comforting discovery. Patanjali says that, in chanting the Satyamugri and Ranayaniya Sakhas of the Samaveda the short "e" and "o" are used.

Thus Sanskrit embraces all sounds. It has also a script in which the sound of every letter is determined with the utmost accuracy.

**APPENDIX 2: The Hajj**

**THE MISSION:**

Sri: Ultimate Goal of Man, Ultimate Truth is advised, recorded in highest thinking: Rig, Yajur, Sama, Atharva, condensed in Vedanta, condensed as Sri Vidya, in 16 stages of Shodashi Mantra: Satsanga, Dharma, Viveka, Vairagya, Yoga, Mumukshutva, Subheccha, Satya Vicharana, Anantha Vicharana, Jnana Vicharana, Tanumanasi, Sattvapatti, Asamsakthi, Padarthabhava, Thuryaga, Jeevanmukthi. Atma is Amma.

Sai: Vedic Global Spirituality degraded to divisive cultural stage. Amma's manifestation for each, as all-stage access for cultures. Thus, each manifestation is complete Guru within that stage. Present Globalization brings together the 48 manifestations.

Venkatesha: Amma's uniqueness in 48 manifestations. 48 are variations of Venkatesha, Amma's manifestation in Kali Yuga. Putting together, these are 48 aspects of the 16 stages. This is complete big picture encompassing language, religion, culture, geography, science, spirituality, Vedas, Sri Yantra and Shodashi.

**STHOOLA (PHYSICAL) LEVEL:**

Local: Vedas preserved in India, may or may not be coincidence. Sai and Venkatesha in Shirdi, Tirupati of South India. So, temples in South India consisting of the 48 derived directly from Vedic principles, but perceived through various Hindu Agamas.

Global: Manifestations in various cultures grew into religions. Sacred sites, natural or constructed throughout the world.

Both are equivalent. However, local makes more sense as a Yatra, a Hajj for the Mission.

**SOOKSHMA LEVEL:**
48 manifestations of 16 stages represented in song. Invocation followed by 16 sections. Each with 24 syllables (Gayathri Chhandas) representing hours. All Aksharas of Veic language covered. Vibhaktis go from 1 to 8 back to 1. Starting syllables of each line spell Shodashi Mantra. Three Kutas of 5, 6 and 4 stages, and 16th is Samashti. Three Kutas represent Rig, Yajur, Sama Vedas. Maya Bijas as 5th, 11th, 15th stages represent Atharva Veda. Song rendered in Grantha alphabet with extra characters added from Tamil script, and IPA for click sounds. Available in: https://imgur.com/K5ck8Fg

TWO STAGES:
Transmission of the mission.

Past: Ishwara to Jiva (my spiritual progress through the years)

Future: Jiva to Jagat (as channel for disseminating the mission)

The Sri Sai Venkatesh Hajj is a transition point.

Mapping between manifestations and shrines visited given. Essential Concept of the manifestation is given as link between the two.
