

SITUATIONAL UNDERLYING VALUE (SUV) STATISTIC FOR MAJOR LEAGUE BASEBALL – DEFENSE

Raymond HV Gallucci, PhD, PE; gallucci@localnet.com; r_gallucci@verizon.net

In Situational Underlying Value for Baseball, Football and Basketball – A Statistic (SUV) to Measure Individual Performance in Team Sports, an all-encompassing, overall statistic to measure “clutch” performance by individual players in the team sports of major league baseball, professional football, and NCAA men’s college basketball was developed, called “Situational Underlying Value” (SUV). [1] Based on the concept of “run expectancy,” it assigns an SUV to each base as a function of the number of outs, including a negative value for making an out. There, and in “Proof of Principle” for Situational Underlying Value (SUV) – A Statistic to Measure Clutch Performance by Individuals in the Team Sports of Major League Baseball, [2] it was applied exclusively to hitters and pitchers. Its derivation is explained in Reference 1, with additional discussion provided in Reference 2; reproduced here is the SUV table for major league baseball (variations for the American and National League are also discussed there to reflect the use of the designated hitter by the former, but will not be addressed here).

base→ outs↓	3	2	1	0
0	0.87	0.63	0.39	-0.23
1	0.68	0.44	0.22	-0.16
2	0.29	0.23	0.12	-0.10

Reference 1 provides two example games to show how the SUVs accrue for each team’s hitters and pitchers. The goal of this third work, which includes “Proof of Principle” as in Reference 2, is to track the performance of a team’s individual fielders defensively, including an enhancement to the approach for pitching previously developed in Reference 2, over the same substantial portion of an entire season. One-third of the 2017 season, i.e., 54 games, have again been selected for the Seattle Mariners, starting with Game 002 and tracking every third game up through Game 161. The SUVs are based on the play-by-play descriptions provided in “Baseball Reference,” <https://www.baseball-reference.com/>. [3] Summary SUV analyses for all 54 games are provided below, with a roll-up of cumulative SUVs every six games. Also, the actual play-by-plays are included for every third game analyzed, starting from Game 005 (i.e., for Games 005, 014, 023, 032, 041, 050, 059, 068, 077, 086, 095, 104, 113, 122, 131, 140, 149 and 158), providing a total for 18 games. For the rest (which are only summarized), the reader should consult Reference 3.

There is an important change to the above table for defensive tracking, also applied to the enhanced pitching analysis, namely the reversal of all the SUV signs, as follows:

base→ outs↓	3	2	1	0
0	-0.87	-0.63	-0.39	0.23
1	-0.68	-0.44	-0.22	0.16
2	-0.29	-0.23	-0.12	0.10

This enables “positive” defensive outcomes (outs) to be assigned positive SUVs, while “negative” outcomes (reaching base or advancing) are assigned negative SUVs. The assignment of defensive SUVs is somewhat more involved than that for hitting. Specific assignments, most frequently encountered, are presented below.

1. Pitchers. Pitchers accrue the full SUV for any play which results in the following: a hit, walk (including intentional), hit batter, balk, wild pitch and strikeout (unless the third strike is dropped and the put out is made at first base, discussed below with the catcher). For outs (other than strikeouts), the pitcher accrues half the full SUV for the play, the rest apportioned to the fielders, as discussed below. Successful stolen bases, negative outcomes, accrue half to the pitcher, while successful pickoffs accrue not only half to the pitcher but also the additional accrual for an “assist,” discussed below. On all other outs, the pitcher accrues as any other fielder (in addition to the half accrual as a pitcher).
2. Catchers. Catchers accrue nothing for strikeouts, unless there is a dropped third strike and the put out is made by a throw to first base. For this, the catcher accrues as for an assist, i.e., $2/3$ of the half of the SUV not accrued to the pitcher (the first baseman gets the remaining $1/3$ of the half). Catchers accrue the full SUV for passed balls and catcher interference, both negative outcomes. The catcher accrues the other half of the SUV on a successful stolen base, again a negative outcome. If the runner is thrown out, the catcher accrues the assist portion, i.e., $2/3$ of the other half of the SUV (the player making the put out gets the remaining $1/3$ of the half). On all other plays, the catcher accrues as any other fielder.
3. Fielders. The philosophy here is that, if there is an assist on an out, the “assister” must perform two actions successfully (catch and throw), while the “put-utter” need perform only one successful action (make the put out). Therefore, the half of the SUV not accrued by the pitcher on an out is split between the assister ($2/3$) and put-utter ($1/3$). If there are multiple assists in making an out, the $2/3$ is evenly split by the assisters. Outs made exclusively by one fielder (e.g., pop fly outs or unassisted ground outs) accrue the full remaining half SUV to the fielder.
4. Errors. When an error occurs, the pitcher is credited with the SUV that would have accrued had the out been made, with the difference between the actual SUV and that which would have accrued to the pitcher now accrued to the fielder. For example, on a lead-off error by the shortstop, the total SUV = -0.39. Had the out been made, the pitcher’s SUV would have been $0.23/2 = 0.115$. Therefore, the pitcher accrues 0.115 while the fielder accrues $-0.39 - 0.115 = -0.505$.

Obviously there will be unique situations not covered by the above, but the philosophy described here would also apply. Special treatment is performed on double (and triple) plays, best described via examples.

1. “Simple” Double Play. The simplest of all double plays would be a lineout with the runner caught off base. For example, after a lead-off walk (SUV = -0.39, all to the pitcher), a line out to the first baseman who doubles up the runner accrues a total SUV = $-(-0.39) + 0.23 + 0.16 = 0.78$. This is actually treated as two separate but consecutive plays. First is the line out retiring the batter. This has an SUV = 0.23, with half (0.115) going to the pitcher and half (0.115) to the first baseman. Next is the tag out by the first baseman of the runner, with a total SUV = $-(-0.39) + 0.16 = 0.55$. Again, half accrues to the pitcher and half to the first baseman, i.e., $0.55/2 = 0.275$ each. Thus, the

pitcher's total is $0.115 + 0.275 = 0.39$ (the expected half of the total for the pitcher), as is that for the first basemen. The next simplest double play would be one of the grounder variety. Again, after a lead off walk, assume a grounder to the shortstop results in a 6-4-3 double play. Again, this is treated as two separate but consecutive plays. First is the force out at second ($SUV = -[-0.39] + 0.23 = 0.62$), which accrues half to the pitcher ($0.62/2 = 0.31$), $2/3$ of half to the shortstop as assister ($0.62/2 \times 2/3 = 0.207$) and $1/3$ of half to the second baseman as put-outer ($0.62/2 \times 1/3 = 0.103$). Next is the put out at first base (0.16), with half to the pitcher, i.e., $0.16/2 = 0.08$, bringing his total to $0.31 + 0.08 = 0.39$ (the expected half of the total $SUV = -[-0.39] + 0.23 + 0.16 = 0.78$); $2/3$ of half to the second baseman as assister, i.e., $0.16/2 \times 2/3 = 0.053$, bringing his total to $0.103 + 0.053 = 0.156$; $1/3$ of half to the first baseman as put-outer, i.e., $0.16/2 \times 1/3 = 0.027$. Thus, the totals for the four players involved are 0.39 (pitcher) + 0.207 (shortstop) + 0.156 (second baseman) + 0.027 (first baseman) = 0.78 .

2. "Complex" Double Play. Add a base runner at second to the previous example for the 6-4-3 double play. The double play results in two outs with a runner on third base. For the first (force) out at second (crediting the runner reaching third base), the total $SUV = -0.68 - (-0.63) + 0.39 + 0.23 = 0.57$. This is split as above, i.e., pitcher = $0.57/2 = 0.285$, shortstop = $0.57/2 \times 2/3 = 0.19$ and second baseman = $0.57/2 \times 1/3 = 0.095$. For the second out at first base (with the runner staying at third base), the total $SUV = -0.29 - (-0.68) + 0.16 = 0.55$. Split again as above, the pitcher receives $0.55/2 = 0.275$ (bringing his total to $0.285 + 0.275 = 0.56$), the second baseman $0.55/2 \times 2/3 = 0.183$ (bringing his total to $0.095 + 0.183 = 0.278$) and the first baseman $0.55/2 \times 1/3 = 0.092$. The total SUV for the double play is $0.57 + 0.55 = 1.12$. The pitcher's total (0.56) is the expected half, and the $SUVs$ for the fielders = 0.19 (shortstop) + 0.278 (second baseman) + $0.092 = 0.56$, the remaining half.
3. Triple Play. Consider a most complex 5-4-3 triple play with the bases loaded, with a grounder to the third baseman, who steps on third (first out), throws to second (second out), who then throws to first (third out). This must be treated in two parts - first as if there was no runner on third; next with apportionment among the fielders (and pitcher) for erasing the runner at third without scoring.

Part 1 (without runner at third)

- a. Unassisted force out at third. $SUV = -(-0.63) + 0.23 = 0.86$, half each to the pitcher and third baseman ($0.86/2 = 0.43$).
- b. Assisted force out at second. $SUV = -(-0.39) + 0.16 = 0.55$, half to the pitcher ($0.55/2 = 0.275$, bringing his total so far to $0.43 + 0.275 = 0.705$), $2/3$ of half to the third baseman ($0.55/2 \times 2/3 = 0.183$, bringing his total to $0.43 + 0.183 = 0.613$) and $1/3$ of half to the second baseman ($0.55/2 \times 1/3 = 0.092$).
- c. Assisted force out at first. $SUV = 0.10$, half to the pitcher ($0.10/2 = 0.05$, bringing his total so far to $0.705 + 0.05 = 0.755$), $2/3$ of half to the second baseman ($0.10/2 \times 2/3 = 0.033$, bringing his total to $0.092 + 0.033 = 0.125$) and $1/3$ of half to the first baseman ($0.10/2 \times 1/3 = 0.017$).
- d. Sub-total. $SUV = 0.755$ (pitcher) + 0.613 (third baseman) + 0.125 (second baseman) + 0.017 (first baseman) = 1.51 .

Part 2 (contribution from runner at third)

The elimination of the runner at third has a total $SUV = -(-.87) = 0.87$, half of which goes to the pitcher ($0.87/2 = 0.435$, bringing his final SUV to $0.755 + 0.435 = 1.19$). The remaining half ($0.87/2 = 0.435$) is apportioned among the

three fielders based on their SUVs without the runner at third (from Part 1) as follows:

$$\frac{0.87}{2} \times \frac{0.183 (3B) + 0.125 (2B) + 0.017 (1B)}{0.183 + 0.125 + 0.017} =$$

$$0.245 (3B) + 0.167 (2B) + 0.023 (1B) = 0.435$$

Total. Pitcher = **1.19**; third baseman = $0.613 + 0.245 = \mathbf{0.858}$; second baseman = $0.125 + 0.167 = \mathbf{0.292}$; first baseman = $0.017 + 0.023 = \mathbf{0.04}$. These sum to $1.19 + 0.858 + 0.292 + 0.04 = \mathbf{2.38}$, i.e., three outs eliminating a bases loaded situation, i.e., $-(-0.87) -(-0.63) -(-0.39) + 0.23 + 0.16 + 0.10 = \mathbf{2.38}$.

The following describes how a typical game is analyzed, based on Game 005, April 7, Seattle-1 @ L.A. Angels-5. Inning three (which contains an error) and inning six (which contains a double play) are tracked defensively. In inning three, Gallardo yields two singles from the start, with SUVs of -0.39 and -0.63 $-(-0.39) - 0.39 = -0.63$, respectively, fully attributed to him. These are reflected in the “SUV” and “Gallardo” columns, each consisting of one “opportunity” (as shown in the “Play” column under “Ops Sum”). The total SUVs are shown in the “Play” column under “SUV Sum.” Next is a strikeout, also attributed fully to Gallardo, which represents an SUV = $-0.44 -(-0.63) - 0.22 -(-0.39) + 0.23 = 0.59$. Next is an atypical intentional walk, which advances both runners (perhaps it is not so atypical considering it was issued to Mike Trout, likely after falling behind in the count). Again, Gallardo accrues the full SUV = $-0.68 -(-0.44) - 0.44 -(-0.22) - 0.22 = -0.68$. An error at third (yellow highlight) allows a run to score and keeps the bases full, an SUV = $-1.00 -(-0.68) - 0.68 -(-0.44) - 0.44 -(-0.22) - 0.22 = -1.00$. Had the error not occurred, and the attempted force out at second been made, the SUV would have been $-1.00 -(-0.68) - 0.29 -(-0.44) -(-0.22) - 0.12 + 0.16 = 0.09$, half of which would have accrued to Gallardo. Thus Gallardo receives $0.09/2 = 0.045$ while Seager accrues $-1.00 - 0.045 = -1.045$. Gallardo strikes out the next batter, accruing the full SUV = $-0.29 -(-0.68) - 0.23 -(-0.44) - 0.12 -(-0.22) + 0.16 = 0.86$. The final out is a force out at second on a grounder to third. This yields an SUV = $0.29 + 0.23 + 0.12 + 0.10 = 0.74$, as all three base runners are erased as well as the batter. Half is attributed to Gallardo, i.e., $0.74/2 = 0.37$, while the remaining half is apportioned between Segura ($0.74/2 \times 2/3 = 0.247$) and Cano ($0.74/2 \times 1/3 = 0.123$). The totals for the inning in the “Inning” columns under “Ops Sum” and “SUV Sum” are 10 and -0.51, respectively.

Inning six is also interesting, since it contains a double play involving the pitcher, as well as a pitching change. After yielding lead off homer (SUV = -1.00) and no out single (SUV = -0.39), Gallardo is replaced by Fien, who induces a 3-6-1 double play. The first out is a force at second (SUV = $-[-0.39] + 0.23 = 0.62$), half to Fien ($0.62/2 = 0.31$), 2/3 of half to Valencia ($0.62/2 \times 2/3 = 0.207$) and 1/3 of half to Segura ($0.62/2 \times 1/3 = 0.1033$). The second out eliminates the batter for an SUV = 0.16, split between Fien in his role as a pitcher ($0.16/2 = 0.08$) and both Segura as an assister ($0.16/2 \times 2/3 = 0.0533$, bringing his total to $0.1033 + 0.0533 = 0.157$) and Fien as a put-outter ($0.16/2 \times 1/3 = 0.027$, bringing his total to $0.31 + 0.08 + 0.027 = 0.417$). Fien strikes out the last batter for an SUV = 0.10, bringing the inning totals to six opportunities with an SUV of -0.49. Following the play-by-play are the defensive (including pitching) game summary and cumulative including all preceding games (just one in this case). The opportunities, total SUV and average SUV per opportunity for each player are tracked and summed, with any error, passed ball, or catcher interference SUV shown in yellow. Offensive statistics for the same game are next extracted from Reference 2, both for the game itself and cumulatively. Finally, the combined defensive and offensive opportunities, SUV and average SUV per opportunity are tabulated for

the game itself and cumulatively. Note especially the difference for the pitchers relative to Reference 2, where, instead of opportunities, their innings pitched were tracked. Also their SUV accrual now differs from Reference 2, where they were assigned the full SUV for each play with reversed signs (now positives were then negatives and vice-versa) to facilitate combining offensive and defensive (including pitching) SUVs.

Here are the results for the 54 games that are tracked, with cumulatives every six games and detailed play-by-play every third game starting with Game 005. The offensive statistics are taken from Reference 2.

GAME 002 (Summary), APRIL 4, SEATTLE-1 @ HOUSTON-2

From Reference 3 the complete season defensive statistics for all the Mariner players are shown above, followed by the 54-game SUV statistics for defense, including pitching, and combined offense and defense for the top 10 players with the most defensive and pitching Opportunities and top 12 for the combined group. For defense, a lower limit of 73 Opportunities (Haniger) was selected. For pitching, the lower limit was 89 Opportunities (Vincent). For combined, the lower limit was 136 Opportunities (Alonso), which added both Alonso and Zunino to the group carried over from the top 10 defensive players. Following the approach developed in Reference 2, whereby the total, mean and standard deviation for each of the three groups are calculated, “+SUV” and “+Avg” are calculated on a normalized basis for each group. Again, as in Reference 2, within each group these two normalized statistics for each player are then averaged (“Both” column) and used to rank the players from first through tenth (twelfth for combined). The reason for considering both “+SUV” and “+Avg” is again the same as in Reference 2 - the former reflects longevity (most Opportunities) over a season while the second reflects expected performance per Opportunity. Combined, both aspects are reflected.

As discussed in References 1 and 2, the goal of developing the SUV statistic is insights into players’ performance “in the clutch” that may not be readily indicated by the myriad of other

statistics currently being used.¹ Below are the season statistics for the top 10 fielders from the SUV lists based on the compilations shown above from Reference 2. To characterize player performance based on such multiple statistics, the approach taken is again the same as in Reference 2, i.e., the players are ranked by normalization of the statistics for selected categories, then these normalized values are averaged to yield one overall result, used to rank the players. A combination of longevity (R-tot [Total Zone Total Fielding Runs Above Average²] and R-drs [Defensive Runs Saved Above Average³]) and expected performance statistics (Fielding Percentage [Sum of Put Outs and Assists divided by Chances], R-tot/yr [R-tot per 1200 innings, or approximately 135 games] and R-drs/yr [R-drs per 1200 innings, or approximately 135games]), i.e., a total of five statistics, are used.

Within the constraints of the comparison (SUV analysis is based on only one-third, i.e., 54 games, of the season vs. Reference 3's complete season; and the subjectivity of which statistics to select for the comparison and use of normalization and subsequent averaging to yield a "performance measure" that can be compared to the SUV), the results provide insights that might not readily be found from the current myriad of statistics. Among the fielders, Heredia, Dyson and Cano stood out as the top performers, with a fairly wide margin over the next player (Seager); while Alonso was the poorest, significantly below the previous player (Motter). When the full season "traditional" statistics are used, Dyson stands out at the top and Segura at the bottom, similar to the SUV results, with Heredia a somewhat distant second to Dyson and Cano now falling in the middle. Again, this comparison is arbitrary, and the SUV analysis uses only 54 of the 162 games, but if one envisions the SUV results to be representative of a full-season performance, they indicate that Dyson performed well in the clutch, somewhat better than his "traditional" statistics would seem to indicate. Meanwhile, Segura did not perform well in the clutch, somewhat below his middling "traditional" statistics. Such insight could be quite valuable to an owner, general manager, and manager (and fielding coach) when assembling a roster and line-up.

For pitchers based on their SUV, Bergman stood out at the top, with Vincent next and well above the rest of the group; while Miranda was the poorest, noticeably below the next higher player (Ramirez). The rankings are quite similar to those from Reference 2, which used a simpler approach to assessing pitcher SUV, with no pitcher displaced by more than one position from his ranking in Reference 2. As shown in Reference 2, based on the full season's "traditional" statistics, Vincent comes out on top, followed by Diaz and Ramirez (the bottom performer based on the SUV), with Bergman and Paxton in the middle. Gallardo and Miranda are at the bottom, consistent with their SUV ranks. There the discrepancy for Ramirez was noted and analyzed, so is not repeated here. Again, to the extent the SUV results for 54 games are representative for an entire season, such insight could be quite valuable to an owner, general manager, and manager (and pitching coach).

¹ Since only 54 of the total 162 games have been analyzed for SUV, all the following "insights" regarding individual players should be taken with "a grain of salt" as merely illustrative as if the entire season had been analyzed for SUV. If the selected games happened to correspond to atypically better or poorer performances by the player than what transpired over the entire season, the "insights" may be biased by the limited selection. While 1/3 of the season is considered to be a significant sample for analysis, it remains possible that atypical player performance has been highlighted. All subsequent "insights" are intended to be illustrative only, not necessarily reflecting deviations from any individual player's overall performance, either better or worse.

² Defined in Reference 3 as "the number of runs above or below average the player was worth based on the number of plays made."

³ Defined in Reference 3 as "the number of runs above or below average the player was worth based on the number of plays made [as compiled by *Baseball Info Solutions*]."

There is one more advantage to SUV that is not readily available using traditional statistics, as illustrated by the rankings for the combined category. Since both hitting and fielding are based on the same statistic (“run expectancy”), it is possible and perhaps quite informative to combine the hitting and fielding SUVs as shown here to yield and overall measure of “clutch” performance by a player both as a hitter and fielder.⁴ Here Seager and Cano stood out, significantly above the next player (Cruz, the designated hitter, whose rather positive offensive SUV enabled him to place this high on the combined list with essentially no fielding contribution); while Zunino is clearly at the bottom of the list of 12, significantly below the previous player (Heredia). Note that Zunino was the only player among the 12 with a negative combined SUV, the result of his rather negative SUV for hitting. As a catcher, he did not have many opportunities for an offsetting positive SUV since

⁴ Pitchers, especially in the American League (who rarely bat, except in National League home parks), are not included in the combined category since their hitting statistics are minimal compared to “everyday” players, even in the National League. For the American League, the designated hitter may or may not have much opportunity to play in the field (as shown here, Cruz had just one Opportunity over the 54 games selected), so his combined SUV is much more heavily weighted toward hitting and may somewhat penalize him relative to the rest since the fielding SUVs tend toward the positive. Nonetheless, the designated hitter is included here.

SUV does not credit put outs to the catcher for strikeouts. A similar effect is evident for Heredia who, despite being the top fielder via SUV, also had a rather negative SUV for hitting which brought his combined ranking way down.
