

Visualizing the distributions of the escape paths of quaternion fractals

S. Halayka*

October 6, 2018

Abstract

The length and displacement distributions of the escape paths of the points in some quaternion fractal sets are visualized.

1 Escape path length and displacement histograms

As discussed in [1, 2], a 3D scalar field of quaternion magnitudes (e.g. $|Z|$) results from calculating a quaternion fractal set when using a finite 3D lattice of regularly spaced points as input.

Here we visualize the distributions of the escape paths' lengths, as well as the escape paths' displacements, for those points within the set.
