**FUNNY THINGS HAPPEN
in Scientific Speculation.**

In the famous “failed” Michelson & Morley Experiment of 1887, nothing happened. Henri Poincare said that nothing happened because the Observer cannot detect its own movement relative to other Inertial Reference Frames.

He called this concept “The Principle of Relativity.” Hendrik Lorentz said that nothing happened because Time dilated in a very localized sense (also length contracted in this locality).

Revisionist authors say that nothing happened because of the flawed assumption of a property of the transmission of Light. In his paper of 1905, “On The Electro Dynamics Of Moving Bodies”, Albert Einstein proposed that three “nothings” added, compounded, shaken, stirred & sifted yielded “something”, which we refer to as Einstein’s Theory of Special Relativity.

According to Einstein & Poincare, the surface of the Earth & its atmosphere rushed rapidly past the stationary Wright Brothers airplane at Kitty Hawk, NC to produce aerodynamic lift to the airfoil. Accordingly, later the mountain approaches the stationary airborne airplane & only Heaven knows how the plane’s R.A.D.A.R. alerts the pilot to the presence of the mountain. Maybe the Lorentz Transformation can explain R.A.D.A.R.? If a westbound airplane & an eastbound airplane are approaching the same mountain, is the mountain approaching each airplane simultaneously, Henri Poincare?

Yes, funny things happen in Scientific Speculation.

Sir Isaac Newton speculated that Light is composed of matter.

Furthermore, he speculated that matter has a physical property which is called MASS. Finally, he speculated about a Hidden Attractant Force in the Physical Reality. (Actually, this Scientific Speculation is not Newton’s, but Brahmagupta’s, who lived in the 7th Century A.D. in India). Newton refined Brahmagupta’s speculation into the concept of Universal Gravitation.

Newton speculated the Universal Hidden Attractant Force acting upon MASS would cause Starlight to bend in CONVEX lines AROUND the Sun. A century later in 1804, Von Soldner published a paper based on this Newton’s speculation. In 1907 or so, Albert Einstein attempted PLAGIARISM when Von Soldner’s calculations appeared in a paper submitted to a Physics journal.

Einstein agreed with Newton agreeing with Brahmagupta. Einstein’s scientific speculation intentionally “predicted” identically to Newton’s Gravity. Or so, Einstein originally intended in his scientific speculation. But, FATE had other plans.

Geometric Gravity in the Space-time Continuum creates a “pseudo” Force of Gravity which Einstein dubbed “The Principle of Equivalence.”

“Imagine an elevator accelerating upwards,” Einstein said. Then Einstein doubled Von Soldner’s calculated deflection on the Starlight bending in CONVEX lines AROUND the Sun & told his friend, Arthur Eddington.

In the Total Solar Eclipse of 1919, Eddington claimed to have detected Starlight bending in CONVEX lines AROUND the Sun. This was the physical evidence that Einstein’s Gravity is not a pseudo-Scientific Superstitious Myth, so the admirers of Albert Einstein tell us.

Yet, Geometric Gravity “predicts” that Starlight would bend in CONCAVE lines TOWARD the Sun, not in CONVEX lines AROUND the Sun. Eddington “proved” that Einstein’s Gravity is a pseudo-Scientific Superstitious Myth after all. SH-H-H! Don’t tell anyone! It will be our little secret!

In 1909 or so, Harlow Shapley’s Ph.D. dissertation, (under Henry Russell at Princeton University,) was that Cepheid Variable Stars are telegraphing their Stellar Distance in a coded message. It is a simple matter of frequency & period. Simply count the blinks. Simply ASS-U-ME the intrinsic inherent luminosity. Almost immediately afterward, Shapley “moved” the Earth from its center of The Milky Way to a location near its peripheral edge. Funny things happen in Scientific Speculation.

Henry Russell had misgivings about granting a Ph.D. to Harlow Shapley. Russell began a survey to determine if an astronomer can ASS-U-ME the intrinsic inherent luminosity of stars. Russell chose a group of Stars which seemed to demonstrate that their Stellar distance from the Earth is both equal & nearby: The Stellar Parallax Stars.

Russell discovered the Stellar Parallax Stars demonstrated a wide range of received luminosity. Therefore, intrinsic inherent luminosity is a pseudo-Scientific Superstitious Myth. Therefore, everything that Harlow Shapley has done to earn him recognition in the textbooks is a collection of myths. Funny things happen in Scientific Speculation.

Russell discovered more. He discovered a wide range of color-spectrum readings. He disproved the assumption of American astronomer, James Keeler, that the Doppler Shift is the only explanation of a RED-SHIFTED color-spectrum.

Russell discovered RED-SHIFTS, BLUE-SHIFTS & BALANCED color-spectrums in the Stellar Parallax Stars. He published his research as the HERTZSPRUNG and RUSSELL SURVEY OF THE STELLAR PARALLAX STARS (1911-1913). But, no one reviewed it. Russell himself would not draw attention to it because it would reveal his mistake with Harlow Shapley.

About a decade later, his reticence would pay dividends because Russell will abandon the solid evidence of the survey, turn like a weathervane & jump on the bandwagon of Stellar Nucleo-synthesis. Funny things happen in Scientific Speculation.

Toiling in anonymity as the Hired Stooge of eccentric Billionaire Percival Lowell, Vesto M. Slipher continued the assumption of James Keeler, (which the Hertzsprung & Russell Survey had voided & invalidated. From Lowell

Observatory near Flagstaff, AZ, Slipher continued to ASS-U-ME the Doppler Shift.

In 1916 in Dayton, OH at the annual convention of the American Astronomy Association, Slipher presented orally his paper. The audience knew that he had completed his oral presentation simply because he had stopped speaking. An awkward silence followed. Then, an opportunistic sociopath in attendance jumped to his feet & began to applaud vigorously. Across the lecture hall, another opportunistic sociopath followed suit & did likewise. Soon, members of the audience responded like popcorn kernels. The result was a rare thunderous standing ovation for a pseudo-Scientific Superstitious Myth WRIT LARGE. Funny things happen in Scientific Speculation.

Across the Atlantic Ocean, two people learned of the rare thunderous standing ovation: Willem de Sitter & Georges Lemaitre. Willem de Sitter was the chosen messenger who “smuggled” Einstein’s Gravity paper from Germany to Eddington in England in 1916. De Sitter fused together the Slipher proposal of RECEDING NEBULAE to Einstein’s Space-time Continuum (a gift from the deceased Hermann Minkowski) to propose THE EXPANDING UNIVERSE. Einstein disagreed with de Sitter. Edwin Hubble was in attendance in 1916 in Dayton, OH, by the way. Hold that thought. Georges Lemaitre consciously avoided the fine universities of Europe, including Cambridge University, to pursue a Ph.D. in Astronomy in the nascent Astronomy department at Harvard University under newly-installed Harlow Shapley – who “lost” the Great Debate in 1921, but who flippin cares anyway?

Lemaitre was aware of Physicist Aleksandr Friedmann, who openly challenged Einstein in the Physics Journals. Friedmann had delivered four mathematical “proofs” of Einstein’s General Relativity Theory: Static, Expanding, Collapsing & Oscillating. Friedmann eliminated the “Lambda”, whereas De Sitter utilized the “Lambda” (to provide the expansion).

In his Ph.D. dissertation before the clueless Harlow Shapley & far removed from the knowledgeable scholars of Europe, Lemaitre “preceded” Edwin Hubble in plagiarizing the deceased Friedmann’s mathematical proof of an EXPANDING space-time continuum.

A scant few years later, Edwin Hubble discovered what he was diligently NOT looking for – THE EXPANDING UNIVERSE.

AT this point, the CURIOS READER, with a measure of HEALTHY SKEPTICISM, is invited to review Nobel Prize Laureate Steven Weinberg’s “The First Three Minutes”. Weinberg notes the “curious” links between Willem de Sitter’s EXPANDING UNIVERSE to Edwin Hubble’s EXPANDING UNIVERSE. Funny thing happens in Scientific Speculation.

Funny things happened as the electromagnetic physical phenomenon of Michael Faraday’s “Ghostly Emanations” was probed. An electromagnetic “presence” was ambient in the Physical Universe. This was widely known by telegraph (and later in telephone) electrical engineers. This was widely known before Electrical Engineer & Bell Telephone & Telegraph Employee,

Karl Jansky, discovered a periodic aberration in the year of 1931, which led to Radio Astronomy. Totally unaware of the origin of Radio Astronomy, the Radio Astronomy team of Arno Penzias & Robert Wilson “rediscovered” the ambient electromagnetic “presence.” Totally bewildered & flum-floxed , Penzias & Wilson named their critter The Cosmic Microwave Background Radiation in the year of 1964/1965. Hold that thought.

Returning to Hubble’s “discovery”, Georges LeMaitre wrote his first post-doc paper after Hubble’s “discovery.” Of course, it pre-supposed Einstein’s General Relativity. Soon, Stellar Nucleo-synthesis invited itself to the party of Scientific Speculation.

A former student of Friedmann, George Gamow, emigrated to the United States of America & began granting Ph.Ds to Graduate Students who would pursue to advance the paradigm of Friedmann-LeMaitre. Still, the BIG BANG IDEA lost in the scientific debates of the decade of the 1950’s. Albert Einstein died in 1955 at the ripe old age of 76 years. Edwin Hubble preceded him in 1953 at the age of 63 years. The BIG BANG/EXPANDING UNIVERSE was not an “accepted scientific fact” as its two principal architects died & were buried. But, funny things happen in Scientific Speculation.

Apart from & separate from the realization that PLASMA is the fourth state of matter in the Physical Reality, the ambient “presence” became linked with the BIG BANG IDEA. Penzias & Wilson’s “re-discovery” played to an audience as foolish as the audience which gave Slipher a rare thunderous standing ovation in 1916. Opportunistic sociopaths & weathervanes jumped on the bandwagon of the BIG BANG IDEA, and the Scientific Textbooks changed its content around the year of 1970. Funny things happen in Scientific Speculation.

Scientific Speculations insist on CONCORDANT COSMOLOGY i.e. “putting all of the eggs in one basket.” Scientific Method & rigorous review be damned!!!! By any other name, it is SCIENTIFIC FRAUD. Funny things happen in Scientific Speculation.

Rocks lie about their age. The Earth “became” much younger & the Physical Universe was no longer eternally ageless nor limitless in spatial dimensions. The FOSSIL RECORD lied about its age because the ROCKS LIE. The pre-1965 Evolutionary Timeline of Events was quietly abandoned & scrapped. Funny things happen in Scientific Speculation.

In the year of 2007, Dennis T. Avery of the Hudson Institute in Washington, D.C., authored “Unstoppable Global Warming”. But, it is repressed & ignored to allow Chicken Little to alarm the General Population.

In the year of 2004, Joshua Gildner authored Heavenly Intrigue: Johann Kepler, Tycho Brahe and the Murder Behind One of History’s Greatest Scientific Discoveries, which identifies Johann Kepler as the assassin of Tycho Brahe. This book launched a “cover-up.” (see VIXRA 1807.0299). Funny things happen in Scientific Speculation when opportunistic sociopaths & weathervanes control the paradigm. Funny things happen in Scientific Speculation when SCIENTIFIC FRAUD masquerades as CONCORDANT COSMOLOGY. Funny things happen in

**Scientific Speculation when the paradigm is controlled by those people who are the least qualified.
I'm laughing, how about you?**

Thank you for reading. This is an installment of CLUELESS IN PARADISE.

Happy De-Programming!
