

# Quantum Thread Theory

by James Cranwell

<http://www.mccelt.com/>

**Everything in the Universe is made from one type of thread.  
All workings of the Universe are result from said thread.**

## Quantum Bang Theory - The Small Bang - Microcosmic Bang

*" People are primed to believe fantasy. That's why we have stuff like big bang theory. Everyone honestly believes everything in entire universe was initially schmooshed into something the size of a proton. You get started in your fantasies and delusions with stuff like Father Christmas and The Tooth Fairy. Then when you are in college and get an 'A' on the Big Bang test: you fool yourself into thinking it is true and correct" -- SM*

~~~~~

### 4 AMAZING BIG BANG FACTS

~~~~~

- Big Bang: Everything in the entire universe was initially schmooshed into something the size of a proton ready to expand.
- Expansion: When the universe expands - nothing is actually moving - only space is stretching. More and more "space" is being magically created out of nothing.
- No Center: Even though they claim the universe is a certain size - they claim there is NO center - and everything everywhere is expanding equally away from everything else.
- Four: Everyone believes 1, 2 and 3.

You have to be a new kind of gullible to believe all of those things, correct? Maybe not, it is all actually true - but for different reasons.

~~~~~

### THE SMALL BANG

~~~~~

- The Small Bang: Everything actually was schmooshed into something the size of a proton. But, it is NOT just one proton "singularity" - it is an uncountable number of neutrinos. Space is NOT empty. There is an all encompassing lattice-type quantum thread network in otherwise empty space (never been ruled out). It is gravity centered - Einstein called it Space-Time. Otherwise known as the Fabric of Space. (yes, the fabric of space must actually be made from something)  
A good 2-D model would be something like a spider's web made of the finest web-silk-thread filament. Now imagine a 3-D web.  
The fabric of space comes in discrete units. One 3-D web would be like one unit of the fabric of space. One unit is about the same size as an atom.  
If you balled-up one unit of fabric of space: you would get one neutrino. Think about how easy it is to collapse and ball-up a spider's web.
- Expansion: A neutrino is a balled-up unit of space - like a quantum ball of spaghetti. Whenever a neutrino decays (loses cohesion, loses shape), it "expands" - meaning it changes shape from a balled-up proton size to full length threads commandeering about the size of an atom.  
If you magnified a neutrino until it was the size of the dot above the letter "i" (a tittle): the fabric of space unit created by it would be the size of a football stadium. There would be 10 threads joined at their centers forming the dodecahedral axis shape. The 10 threads would be like the finest spider's web

The thread unit itself would be just the grey threads (or strings) in the picture (no color and a lot thinner of course). It would fit perfectly inside of a [dodecahedron](#). Actual thread (or string) length is about one Ångström and it is fine enough where 10 threads (20 radii) could curl-up into the size of a neutron.

filament. Fine enough where 10 threads can ball up into the same size as the dot above the letter "i".

- No Center: Correct. The universe is actually infinity, so, there is no center. The neutrinos must be "expanding" at an high enough rate where there is a noticeable effect in the universe. It is hard to believe but they actually would be "expanding" space and nothing would be moving. More and more "space" is actually being magically created but, it is from the expansion (decay) of neutrinos. Neutrinos "decay" into the fabric of space (it is only a shape change).

~~~~~  
**QUANTUM BANG THEORY**  
 ~~~~~

The initial conditions of the universe could be either:

- The quantum thread network (fabric of space) is already in place as it is now. That means the neutrinos are expanding and creating more and more fabric of space and adding it to an already existing mesh.
- Or, there might have been nothing but a massive amount of neutrinos zipping around in a literally empty void space. If that is true there would be no gravity, light, heat, time (as we measure it), or anything else until enough neutrinos expand to create enough fabric of space for tension and vibrations to start.

Think of a tennis net. You could pluck one of the net threads and vibrations would travel through the whole net. That would NOT work if there were small pieces and or big chunks missing from the net. You would have to wait until the missing pieces of the net are filled in. That is the same way neutrinos would fill in an empty universe. Keep filling piece by piece until the threshold density is reached... then Boom! Let there be light (vibrations).

~~~~~  
**MICROCOSMIC BANG**  
 ~~~~~

A neutrino ● can expand - Bang - into one unit of fabric-of-space ✱  
 The same thing happened everywhere and is still happening everywhere now.  
 That is why the CMB is smooth.

● ⇒ ✱

~~~~~  
**MATTER IS CREATED FROM NON-EMPTY SPACE**  
 ~~~~~

The basic fundamental substance is a thread group composed of 10 threads joined at their centers. That forms the axis of the dodecahedron - an automatically forming platonic shape.

10 threads joined at centers equals 20 radii unit

proton threads ~~~●~~~ (1, 18 balled, 1)

neutron thread ●~~~

ball up (knot) together ●●~~~ strong force.

electron ~~~✱~~~ (1, 18 disc, 1)

twist in electron ●●≈≈✱~~~ get EM force (package aka deuterium)

completely balled-up neutrino ●

absolutely nothing balled-up ✱ unit of fabric-of-space

Basic fundamental universal substance is shape-shifter.  
 "Flux Particle made from 10 threads that's 20 radii.  
 Balled up - proton, neutron, neutrino

Expanded - fabric-of-space

Disc - electron

That is why "stuff" can decay into other stuff - everything is made from same stuff

When the threads are balled up: they are matter

When completely expanded: they are space itself - that is NOT considered matter

a neutrino is a completely balled up thread group - with NO dangling thread tethers.

The tethers are the mechanism of all "forces."

~~~~~

**Dark Matter & Dark Energy**

~~~~~

- Dark Matter: also known as the fabric of space is a gravity-centered thread network (never been ruled out) especially excessive clumps.
- Dark Energy: is tension on network as a whole. (the creation of new space and the supposed stretching are what is explained in this paper).
- Everything is pulled on equally.
- Any masses in system create higher tension pull between them - that's gravity.

~~~~~

**MASS IS INERT -- ALL ENERGY COMES FROM SPACE**

~~~~~

Energy NOT contained in mass. Mass is inert.

"Energy" comes from vibrations / movement - NOT mass itself. Energy comes from space

Thread tension formula

Tension = velocity<sup>2</sup> x mass / Length

Plug in c, rearrange, get one-inch formula for gravity, light, energy and time:

TL = mc<sup>2</sup>

| -- inch -- |

Tesla was correct...

"There is no energy in matter other than that received from the environment." – Nikola Tesla

Mnemonic memory device...

E for Einstein: E = mc<sup>2</sup>

TL for Tesla: TL = mc<sup>2</sup>

~~~~~

**SPACE-TIME IS A MEDIUM**

~~~~~

If something is bending or curving or warping or gravitationally microlensing light - it means light is a physical part of it.

Waves can only travel in a medium - that includes light.

PG says cosmological red-shift can stretch Space-Time and thereby stretch photons in transit. If that is correct it would mean photons are traveling in space-time - as a part of it - and space-time is a medium. Something can only affect something else if it is in direct contact or it is a part of it.

The spiders web and moth are a good example. A moth can only be pulled apart by a stretching web if it is stuck in the web.

If a moth is doing a fly-by the web has no effect on it.

So, space-time must actually be something and there is a huge amount of it.

Got That? You cannot curve light in nothing. Magic is NOT real.

The reason light always travels at "c" the speed of light is: there is a medium filling space.

Michelson-Morley created an experiment to detect if the Earth is rushing through the medium. The experiment was null - so the Earth is NOT rushing though it.

Then, just recently, they created Gravity Probe B - to detect if the medium is being dragged - and they found out... yes, it is being dragged!

Einstein called the medium "Space-Time."

It is responsible for gravity, the conveyance of light and a few other things. That's why the speed of light, gravity and the speed of gravitational waves are the same speed - the speed of light.

- Light travels at speed of light  $c$
- Gravitational waves travel at  $c$

Notice exact same speed.

Must have something in common.

- Gravitational waves travel in space time.
- Light is a massless particle or wave or both at the same time (they are not sure) and travels in nothing?

No, they goofed. Think about for a month.

~~~~~

## **TWO WRONGS MAKE A RIGHT**

~~~~~

They think there was a Big Bang.

If true: there would absolutely be a center of the universe.

But, they claim there is NO center.

Truth: Universe is infinity, so - actually NO center.

So, they are wrong twice - but it makes "no center" inadvertently correct.

If everything is actually as they say: of course there is a center.

The BB proton "singularity" has a center.

The universe "inflated" to grapefruit size in a nanosecond - a grapefruit has center.

Now the Universe is claimed to diameter: 93 billion light years. That of course has a center.

If the universe has a certain size or variable size that means there is a center.

Note for imbeciles: the "size" doesn't matter. It could be 13 billion, 93 billion, whatever. Anything less than infinity has an exact size and a center.

~~~~~

## **EPILOGUE**

~~~~~

So, now you do NOT have to worry about being called "gullible" because you believe more and more space is being magically created, it really is happening.

Here is a regular thread tension formula...

Tension = velocity squared x mass / Length.

If we plug  $c$  in and rearrange we get the one-inch formula...  $TL = mc^2$

<http://www.mccelt.com/the-one-inch-equation-to-explain-all-physical-laws.php>
