I am working hard to build a time machine to save people (but also to save myself).

Have you ever received emails from the future or letters from the future? It is a person who is thinking of making a time machine seriously. If you put a letter to the past in the Tesla coil (the space must be reversed in the coil) and put a stamp, Japan should definitely put it in the post even if it is on the way (In the Showa era when it was once peaceful). In that way, I would like to write a warning letter to the past.

In "Silver Birch's Reiki", there are about 300 stars in the universe with earth-like civilization in the universe, and they come to the earth from about 100 stars. However, the arrangement says, "We can never be involved in the history of the earth (events)." It is all about crying crying. That means that things can move much faster than light. Or maybe it is coming beyond dimension.

However, if you fly with a spacecraft that is nearly as fast as the speed of light, the time in the spacecraft flows slowly and people on the spacecraft can reach the destination without feeling the time.

In addition, in "Silver Birch's Spiritual Training", "There are about 300 stars with high civilization like the earth in the universe, but among them, the earth is second from the lowest in spirituality" It is.

Number of oscillations per second of red light \square times per second = 3.9×10^{14} times
Number of oscillations per second of purple light " times per second = 7.9×10^{14} times
amount of energy of red light $E = h$ (Joule * second) $\times 3.9 \times 10^{14}$ times / second = 2.584166×10^{-19} joules
The amount of energy of purple light $E' = h$ (Joule * second) $\times 7.9 \times 10^{14}$ times / second = 5.234594×10^{-19} joules

..... In other words, you can go back to the past if you rotate time to reverse rotation.

Time flows slowly because the frequency of time approaches infinitely close to the speed of light.

So how do you reverse the time? Here is difficult.

You can go back to the past if you reversely rotate the wave of time, you can go back to the past even with at least 50 cm of pipe.

So, put a document that you want to go back to the past in the 50cm pipe, (If it is 1m, people can go back in the past, but it seems that there is no return?)

This is why the speed of light makes the flow of time so slow. If you fly at a speed as close as possible to the speed of light, the flow of time will be very slow.

Time was a wave.

You can see it by reading the book of Lorenz's law.

There is a video on Youtube that a university professor of American physics can build a time machine. If you search for "time machine" on Youtube, it will come out.

It was told something like saying that it is good to focus a thousand lasers and focus on the fineness of the hair.

But can you build it? I think.

It should be possible if you reverse rotate the wave of time.
