1. The distance at $3 \times 10^8$ m is independent of time.
2. Any amount of time is independent of the distance $3 \times 10^8$ m.
1. This means that the distance $3 \times 10^8$ m is the distance that you can't add more time more than 1 second.
2. This means that no matter how much time you add or take the distance $3 \times 10^8$ is the same in all cases.
