

Four Numbers Having the Digits 1 and 5 Are of Importance in MHCE8S Theory

George R. Briggs

Abstract: The 3-digit dimensional constants 0.511, 15.5, 1.55, and 155 are 4 constants based on the 2 digits 1 and 5 and they appear in 4 places in MHCE8S theory.

My last¹ note pointed out how important the numbers 4 and 8 are in the MHCE8S theory of the universe.

In this note I wish to point out the role the digits 1 and 5 seem to play as 3-digit constants in MHCE8S theory. The mass of the electron in MeV is the first. The mass of the tau neutrino in MeV is the 2nd. The age differences of cyclic universes in billions of years is the 3rd. Finally the historical age in years of my ancestor's murder² in 1864 is the 4th..

The inclusion in MHCE8S theory of my murdered ancestor's date in history is a mystery to me. My father thomas roland was professor of physical chemistry at cornell university and he was the 4th generation grandson of the murdered man. He spent a large amount of teaching time on the chemical phase rule of Josiah Willard Gibbs, whom he admired and thought had been greatly overlooked
