ABSTRACT

When a theory (physics) is based on an unrealistic/unknown/impossible term then it becomes an unrealistic theory, such a theory cannot describe something in nature/reality. So if you act as if that unrealistic theory is realistic then you are a fraud, and if your grant application is based on that unrealistic theory then it's a fraudulent grant application.

INTRODUCTION

When a theory is based on Santa Claus then it's obvious that it's an unrealistic theory, so if you act as if that unrealistic theory is realistic then you are a fraud and if your grant application is based on that unrealistic theory then it's a fraudulent grant application. Physicists/etc will admit that I'm right about that, but when I explain that a lot of their theories are unrealistic as well and that they all act as if those theories are realistic then they refuse to admit that I'm right (they are silent). Physicists/etc know that a lot of theories are based on an unrealistic/unknown/impossible term, such a theory cannot describe something in nature/reality but they act as if it's a realistic theory and that is fraud. And they used/use those unrealistic theories for grant applications, so a lot of education/research was/is based on those unrealistic theories and that was/is fraud as well.

FRAUDULENT THEORIES

A lot of theories are based on the following unrealistic/unknown/impossible terms, physicists/etc know that those terms are unrealistic/unknown/impossible but they act as if those terms are realistic/known/possible and that is fraud.

1.) Time.

Physicists/etc use time in theories and they act as if they know what time is while they don't know what time is, so if a theory is based on time (and if the theory requires that they know what time is) then it's an unrealistic/fraudulent theory and that means that each grant application for education/research is fraudulent as well if it's based on that unrealistic/fraudulent theory. And if a theory which is based on time is an unrealistic/fraudulent theory, then other theories are unrealistic/fraudulent as well if they are also based on that unrealistic/fraudulent "time" theory.

2.) Time dilation.

Physicists claim that gravity affects time while they don't even know what gravity and time are, so time dilation is a fraudulent theory because physicists/etc act as if it's a realistic theory (so Einstein was a fraud) and that means that each grant application for education/research is fraudulent as well if it's based on that unrealistic/fraudulent theory. And if time dilation is an unrealistic/fraudulent theory, then other theories are unrealistic/fraudulent as well if they are also based on that unrealistic/fraudulent "time dilation" theory. The many calculations/experiments/observations/predictions seem to prove that time dilates but that's impossible, the many calculations/experiments/observations/predictions could only prove that there was a dilation in the registration rate of a clock or a dilation in the rate of a process.

So Einstein fooled himself that time itself was relative, he failed to see that the registration rate of a clock is relative (Vixra paper 1807.0181) and that means that his theory of special relativity is unrealistic/fraudulent as well. The many calculations/experiments/observations/predictions seem to prove that Einstein's theory of special relativity is correct but that's impossible, Einstein's theory of special relativity cannot describe the reason why the many calculations/experiments/observations/predictions were correct.

3.) Spacetime.

Spacetime results from time dilation and that means that it cannot exist, so it's obvious that it's also an unrealistic/fraudulent theory and that means that each grant application for education/research is fraudulent as well if it's based on that unrealistic/fraudulent theory. And if a theory which is based on spacetime is an unrealistic/fraudulent theory, then other theories are unrealistic/fraudulent as well if they are also based on that unrealistic/fraudulent "spacetime" theory.

So it's obvious that a gravitational wave cannot exist because a gravitational wave can only exist in spacetime and that means that those discoveries cannot be real, so dishonest people at LIGO/VIRGO are simulating signals of gravitational waves with fake data. LIGO/VIRGO simulate fake signals with fake data (blind injections) during the research in order to test the computers and the researchers, so it's obvious that dishonest people can also simulate a discovery.

4.) Curved space/spacetime (Einstein's theory of gravity).

Physicists cannot even visualize the curvature of space near a celestial object in a realistic 3-dimensional model, curved space/spacetime is a fraudulent theory because physicists/etc act as if it's a realistic theory (so Einstein was a fraud) and that means that each grant application for education/research is fraudulent as well. And if a theory which is based on curved space/spacetime is an unrealistic/fraudulent theory, then other theories are unrealistic/fraudulent as well if they are also based on that unrealistic/fraudulent "curved space/spacetime" theory.

So if curved space/spacetime (Einstein's theory of gravity) is an unrealistic/fraudulent theory then Einstein's theory of general relativity is an unrealistic/fraudulent theory as well. Einstein's theory of general relativity is an unrealistic theory and that is why it cannot be unified with quantum mechanics, Einstein's theory of general relativity is based on an unrealistic process.

The many calculations/experiments/observations/predictions seem to prove that Einstein's theory of general relativity is correct but that's impossible, Einstein's theory of general relativity cannot describe the reason why the many calculations/experiments/observations/predictions were correct.

5.) Event horizon.

An event horizon is a spherical boundary of a gravitational field around a black hole, it's the point of no return. But logic dictates that an event horizon cannot exist if they cannot even visualize the curvature of space near a celestial object or a black hole in a realistic 3-dimensional model, so an event horizon is a fraudulent theory because physicists/etc act as if it's a realistic theory and that means that each grant application for research is fraudulent as well if it's based on that unrealistic/fraudulent theory. And if a theory which is based on an event horizon is an unrealistic/fraudulent theory, then other theories are unrealistic/fraudulent as well if they are also based on that unrealistic/fraudulent "event horizon" theory.

Physicists/etc claimed that they took a picture of the shadow of an event horizon but that is impossible, you cannot take a picture of something that cannot exist.

CONCLUSION

Governments don't realize that a lot of education/research is based on unrealistic/fraudulent theories, and physicists/universities/institutes don't realize that they are guilty of fraud. Governments have wasted billions of dollars each year (for more than 100 years) on fraudulent grant applications, so they have wasted a lot of money on education/research which was based on unrealistic/fraudulent theories. And governments are wasting billions of dollars on gravitational wave research as well because they believed that those discoveries were real, they need to investigate who is simulating those discoveries and they need to reclaim the grants. This is the biggest fraud ever and it's an unnoticed fraud, and it's Einstein's fault.
