

Physics of the Number 888

Sylwester Kornowski

Abstract: Here we show that the number 888 associated with Christ the Redeemer (Jesus) relates to the degrees of freedom of the non-rotating-spin neutrinos ($8 + 8 + 8 = 24$) i.e. to the components of the dark-matter (DM) structures. We claim that the spiritual world is built of the DM structures. On the other hand, the distribution of naturals with periodicity 24 leads to a cross.

According to the Sale-Symmetric Theory (SST), there are 5 levels of Nature created due to evolution of the initial inflation field: the SST tachyonic Higgs field, the binary systems of closed strings composed of the tachyons (we call them entanglons), the neutrinos and binary systems of them composed of the entanglons – neutrinos are the stable objects because of the interactions of the neutrinos with the SST Higgs field (stability follows from the dynamic viscosity), the cores of baryons (and the electrically charged leptons), and the core of the Protoworld which transformed into the expanding dark matter [1], [2].

The SST tachyons have 6 degrees of freedom while the degrees of freedom of the four other objects with rotating spin defines following formula [3]

$$N_d = 8 \cdot (2d - 1) + 2, \quad (1)$$

where d are the Titius-Bode (TB) numbers: $d = 1, 2, 4, 8$, and $d = 1$ is for the entanglons, $d = 2$ is for the cores of neutrinos, $d = 4$ is for the cores of baryons (and the electrically charged leptons), and $d = 8$ is for the core of the Protoworld.

For the non-rotating-spin objects we have

$$N^*_d = 8 \cdot (2d - 1). \quad (2)$$

For the core of neutrinos with non-rotating spin we obtain $N^*_{d=2} = 24$. Within the SST we showed that such neutrinos are the components of the dark-matter (DM) structures [4].

Let's consider the non-rotating-spin closed string (it is a torus). It has maximum 8 degrees of freedom: x, y, z for the centre, two radii r_i and r_j , toroidal speed $v_{i,toroidal}$, poloidal speed $v_{i,poloidal}$, and linear speed $v_{i,linear}$. The entanglons also have 8 degrees of freedom because the distance of closed strings in the entanglons is defined by the radius associated with the poloidal speed [1].

The three different cores, so the core of neutrinos as well, consist of a torus and central scalar condensate/ball. But SST shows that the radius r_i of such cores follows from r_j , and vice versa [1]. It means that such non-rotating-spin torus has 7 degrees of freedom but there appears the

radius, r_0 , of the central scalar condensate so the cores as a whole have also 8 degrees of freedom.

Let's consider the non-rotating-spin core of the neutrinos. It as a whole has 8 degrees of freedom. But both the torus and central condensate/ball consist of the entanglons so the internal degrees of freedom of both the torus and ball are 8 and 8 respectively. We see that such cores have $8 + 8 + 8 = 24$ degrees of freedom. Here we have three eights related to neutrinos, and neutrinos are the basic elements of gravitating matter. The dark-matter structures are built of the non-rotating-spin neutrinos so the true physics (the SST) suggests that the number 888 is associated with DM.

On the other hand, from the Greek Gematria Code (the Greek Isopsephy) we have [5]

$$\text{ΙΗΣΟΥΣ (IESOUS, translated as JESUS)} = 10 + 8 + 200 + 70 + 400 + 200 = 888 ,$$

$$\text{ΧΡΙΣΤΟΣ (CHRISTOS, translated as CHRIST)} = 600 + 100 + 10 + 200 + 300 + 70 + 200 = 1480 ,$$

$$\text{ΛΥΤΡΩΤΗΣ (LUTROTRES, translated as REDEEMER)} = 30 + 400 + 300 + 100 + 800 + + 300 + 8 + 200 = 2138 .$$

We showed that the number 888 is associated with dark matter and Jesus – it suggests that the spiritual world is built of the DM structures. On the other hand, Peter Plichta showed that the distribution of naturals with periodicity $24 = 8 + 8 + 8$ leads to a cross [6].

Therefore the final conclusion is as follows

Christ the Redeemer (Jesus = 888) is built of the DM structures.

Notice also that we have $888 = 74 \cdot 12$, where

888 relates to Jesus in Greek gematria,

74 relates to Jesus in English gematria [3], and

12 relates to L (from L-utrotres) in English gematria [3].
