Abstract

We complete our discussion in the previous paper

A Summary Of My Research
<http://vixra.org/abs/1907.0465>

Paper Hypothesis

Solar Planet Matter is Created Based On The Following Features:

- A- Planet Matter Can't Be Created by Any Random process
- B- Planet Matter Can't Be Created Independently From Other Planets Matters
(Planet Diameter and Mass supports this claim)
- C- There's a direct relationship between planet diameter and orbital distance

1-Matter Creation Discussion

1-1- How The Matter Is Created?

1-2- Matter Creation Features

1-3- Earth Moon Diameter Creation As An Example

1-1- How The Matter Is Created?

We have to repeat asking this question frequently- where the matter is the universe basic player and any serious study should start with this question...

How The Matter Is Created?

Based on What Procedures The Matter Is Created?

How to answer these questions?

To answer we have 2 tasks to do:

(1st Task) We should review what progress is already done to answer these questions

(2nd Task) We should define what sources we have to use for this answers

Let's start immediately

(1st Task)

We should review what progress is already done to answer these questions

What progress is done?

Our science depends on the concept that – the matter is consisted of small parts as molecules – and the final matter is the summation of these small parts

For that reason - we consider that- the solar planets are created by a similar method- small parts (molecules or atoms) are unified together and produced the planet matter This is the basic description which we will find in any theory concerning the solar planet creation....

This description provides serious difficulties – over which – we have no way to pass - Simply the description doesn't refer to any possible relationship can be found between any 2 planets matters...

At our side – if we have to follow this description- we would loss the advantage of analyze any geometrical scene in the solar group- that simply will cause the Planets Data Sheet as useless Paper...

The Eclipse Phenomena can be our strong proof for this claim – again – we see the sun disc = the moon disc because the sun and moon diameters rate = their distances rate to the Earth – Simply the geometrical relationship is found regardless our consideration – because without this geometrical relationship we could not see the sun disc = the moon disc

Many times I have referred to this conflict between 2 solar group visions

Any way – the main problem here – is that – the current theory and description – in fact – prevents us to use the planets data by our data analysis method– and also they don't tell us how to use Any Planets Data ...

Planetary Fact Sheet – based on this situation – can't help us to know any truth about the solar group....

And as a result – we have thousands of questions which have no answers at all –

(2nd Task)

We should define what sources we have to use for such answers

We have the solar planets data...!

It's a treasure of goldlet's consider that for a while

Solar Planet Matter is created regardless the human mentioned effect (hypothesis) – what does that mean? we may create matters by some experiments in labs and that's very good help to our study – but the solar planet is a matter found without the human mentioned intervention – It's system has its own geometrical rules and mechanisms – It's simply a huge treasure gifted from the Great Designer to the human – ideas we can't create and knowledge we don't expect -

As when a person found in front of him millions of money has no owner –found free – and any one can use!!

What question we search to answer? How the matter is created?

Ok the planets are matters and we have their data – what we will do – just to examine this data and analyze it to reach to how the planet matter is created

Very Good

We have the required data to answer the question and we have the method by which we'll use this data to answer the question Simply let's answer the question in following...

1-2- Matter Creation Features

How The Matter Is Created?

Every one waits as if I know the answer of this question...!

But I know some features only let's write them in following:

- A- Planet Matter Can't Be Created by Any Random process
- B- Planet Matter Can't Be Created Independently From Other Planets Matters
(Planet Diameter and Mass supports this claim)
- C- There's a direct relationship between planet diameter and orbital distance

A- Planet Matter Can't Be Created by Any Random process

1- Planets Diameters Can't Be Created By Any Random Process

Eclipse Phenomena supports this meaning clearly – and the following table increases this support strongly..

I-Data

Table No.1		No Error More Than 1.5%
The Relationship		The Rate
Earth Diameter / Venus Diameter	=	A
= Mars Diameter / Earth Radius	=	
Mars Diameter / Venus Radius	=	A ²
= Venus Diameter / Moon Circumference	=	
= Moon Radius * π/ Mercury Diameter	=	
= Pluto Circumference / Mars Diameter	=	
= Uranus Circumference / Jupiter Diameter	=	
= lunar apogee radius / lunar perigee radius	=	
Pluto Circumference / Earth Radius	=	A ³
= Mercury Circumference / Earth Diameter	=	
= Earth Diameter / Moon Circumference	=	
= Uranus Radius / Mars Circumference	=	
= Jupiter Diameter / Saturn Diameter	=	
= Saturn diameter / Uranus Diameter	=	
Venus Radius / Mercury Diameter	=	A ⁴
= Uranus Diameter / Earth Circumference	=	
Uranus Diameter / Venus Circumference	=	A ⁵
Jupiter Radius / Uranus Diameter	=	A ⁶
= Mercury Diameter / Moon Diameter	=	
= Mars Diameter / Mercury Diameter	=	

II- Discussion

The previous table provides us a new vision about the solar planets creation – Simply the planet diameter can't be created neither by random process nor independent from other planets diameters – the table supports that clearly

How to understand that?

It's the description in our minds which causes the difficulty – while we believe that the planet diameter is created by summation of small parts (molecule or atoms) and they are unified without any effect of any other matter – that means the planet matter (diameter) is created based on its inner structure regardless any outer other matters
So the previous table is found by pure coincidences (coincidences for 20 times!)

The description is our main difficulty...

Simply let's ask

Do we know any matter is created because of any other matter?

It's The Double Production Experiment – Gamma rays 1.2 Mev produces electron and positron – now each particle is created depend on the other – if the electron is not created the positron will not be created because of the charges conservation law
i.e. The matter can be created because of another matter creation...

So the empirical evidence simply disproves the description – the main concept can be disproved easily – the matter neither found by random process nor found independently from the other matters – the description is mistaken

Based on the previous conclusion we can provide the following relationships

BASIC RELATIONSHIPS

- 1- 2 Jupiter Circumferences - 2 Saturn Circumferences = 1 Jupiter Diameter (error 1.3%)
- 2- 2 Jupiter Diameters+ 1 Saturn Diameter = Solar Planets Diameters Total (No Error)
- 3- Jupiter Diameter = 8 Planets Diameters Total
- 4- Earth Circumference = The Inner Planets Diameters Total
- 5- 2 Neptune Circumference = The Outer Planets Diameters Total (without Neptune)
- 6- Saturn Diameter – Jupiter Radius = Neptune Diameter x 0.99 (No Error)

Table No.2 Why Earth Circumference = 40080 km?		
<i>If Earth diameter = 12756 km, is considered to be = 1</i>		
Earth Circumference = 40080 km, will be just = Π So..... The Following Vales Are Correct		Error
❖ Earth Circumference	= Π	-
❖ Solar Inner Planets Diameters Total	= Π	-
❖ Solar Outer Planets Diameters Total	= 9Π	-
❖ Moon Orbit Radius (At Perigee Point)	= 9Π	-
❖ All Solar Planets Diameters Total	= 10Π	1%
❖ Moon Orbit Radius (At Apogee Point)	= 10Π	1.2%
❖ 2 Jupiter Diameter + Saturn Diameter	= 10Π	
❖ Moon Orbit Radius (At Total Solar eclipse Point)	= 9.5Π	-
❖ Saturn Circumference	= 9.5Π	-

Please review ... Why Jupiter Diameter =142984 km? (1) <http://vixra.org/abs/1907.0137>

Also Why Saturn Diameter =120536 Km? (Part 1) <http://vixra.org/abs/1907.0418>

2- Planets Masses Can't Be Created By Any Random Process

(Solar Group Masses Distribution)

I claim that – the solar planets masses total was one Mass and divided by the next distribution for geometrical reasons

That means – any planet mass isn't its own property but this mass is found for this planet as a geometrical feature produced by the general geometrical design
i.e.

- There's a general geometrical design for the solar group

And

- This general geometrical design defines the mass value for each planet
- The planet receives his mass as a gift from the general design to enable the planet to do his task which is required for the general design

i.e.

- The solar group mass is distributed to the planets based on geometrical reasons

Let's try to show that in following

I-Data

- The solar group total mass = $2667 * 10^{24}$ kg,
- This mass total is divided into 2 parts with rate 1: $(3.66)^2 = 200 : 2467$
- Value $2467 * 10^{24}$ kg is divided with rate 3/10 (Saturn Mass/Jupiter mass)

- **$200 * 10^{24}$ kg is separated into 2 equal parts 100 (Neptune Mass) + 100 (others mass)**

From this distribution, we found that,

- $100 * 10^{24}$ kg (the rest after Neptune) is separated to 88 Uranus + 12 the rest

- **$12 * 10^{24}$ kg is separated into 2 equal parts 6 (Earth Mass) + 6 (total masses of Mercury + Venus+ Moon +Mars)**

I-Discussion

Mass Distribution Explanation

The Mass distribution depends on Anderson Experiment 1932 (produced electron and positron from Gamma rays 1.2 Mev)

(A Hypothesis)

The description assumes that, a great Gamma Rays produced 2 matters (as electron and positron),

Let's use Earth Mass as an example

Example

- $12 \cdot 10^{24}$ kg is separated into 2 equal parts 6 (Earth Mass) + 6 (total masses of Mercury + Venus+ Moon +Mars)

Why Earth Mass = the inner rest 4 planets masses total?

The idea tells us that a great Gamma rays produces 2 particle (one electron and one positron)

(1)

Earth Is The Great Electron

- Earth is A Great electron, that means Earth atoms have positive nuclei and negative charges (electrons) move around, which is truth ...

(2)

4 inner rest planets together are The Great Positron

- The 4 Planets (Mercury, Venus, the moon and Mars) together form A great Positron
- (a great positron means – these planets consist of atoms have a negative charges in their nuclei and positive charges (positrons) move around) – this is a hypothesis
- Based on this description the attraction force between these five inner planets depend on the electrical charges and no gravity

The Solar System Geometry (Part I) <http://vixra.org/abs/1509.0126>

Note Please

I don't confirm that – by this method the inner planets are created – I just try to show that – the planets masses can be created depending on each other as similar to the planets diameters – and that tells us – it's possible the planet matter to be created depending on the other planets matters.

C- There's a direct relationship between planet diameter and orbital distance

We have 2 proves for this claim (1st) proof we have discussed in Part 1 of this series and (2nd) Proof is my equation - let's refer to them shortly as possible

(1st Proof) – Solar Planet Order Shows A Relationship Between Planet Diameter And Orbital Distance

Solar Planets order examination

- The inner planets order (Mercury – Venus – Earth) shows that there's some the relationship between planet diameter (or mass) with their orbital distance, means **Greater Diameter (Or Mass) needs Greater Orbital Distance** ...
- (2)
 - The outer planets order (Jupiter- Saturn- Uranus- Neptune – Pluto) tells that the rule is reversed where **Greater Diameter needs Shorter orbital Distance** But.... The order depends **on diameter and NOT Mass** because Uranus Diameter is greater that Neptune where Neptune Mass is greater than Uranus..
- (3)
 - **(The Conclusion)** there's some relationship between the planet diameter and orbital distance but this relationship is reversed after **Mars** for some reason- (Also The Data Direction doesn't support the relationship between the planet mass and orbital distance which disproves the sun gravity concept)

When I asked this question... the answer was because of the "**Initial Points**"

But I couldn't accept this answer...because

- The inner planets and outer planets orders provide 2 different forms **For The Same Rule** So the nearest conclusion is that there's a relationship between the planet diameter and orbital distance where Mars position in the solar group order causes disturbance for this relationship.

Conclusion

- There's a relationship between Planet diameter and orbital distance
- Mars causes a disturbance for Planet diameter and orbital distance relationship because Mars immigrated from his original point (with orbital distance 84 mkm) to its new point with orbital distance 227.9 mkm

Please review

Mars Orbital Distance Is Changed Through History

<http://vixra.org/abs/1905.0510>

Pluto was "The Mercury Moon"

<http://vixra.org/abs/1807.0331>

(2nd Proof) –

Gerges Equation For Planet Diameter And Orbital Distance Relationship

$$D = R * 109^2$$

Where D = planet orbital distance

R = Planet diameter

Let's see that in following

- $109^2 \times$ Mercury diameter 4879 = 57.9 mkm Mercury orbital distance
- $109^2 \times$ Venus diameter 12104 = 144.9 mkm (Mars Displacement)
- $109^2 \times$ Moon diameter 3475 = 41.4 mkm (Earth – Venus distance)
- $109^2 \times$ Earth diameter 12756 = 149.6 mkm (Earth Orbital distance)
- $109^2 \times$ Mars diameter 6792 = 80.5 mkm (Earth – Mars distance)
- $109^2 \times$ Jupiter diameter 142984 = 1700 mkm (Mars –Jupiter Circumference)
- $109^2 \times$ Saturn diameter 120536 = 1433.5 mkm (Saturn Orbital Distance)
- $109^2 \times$ Uranus diameter 51118 = 607.5 mkm
- $109^2 \times$ Neptune diameter 49528 $\times \pi$ = 3700 mkm (Jupiter Neptune distance)
- $109^2 \times$ Pluto diameter 2390 $\times \pi$ = 89 mkm (Earth – Mercury distance- 3% error)

II-Discussion

- Previous data tells us that D is Not only (the Planet orbital distance), but also a distance between 2 planets (or even the circumference of this distance) (i.e. D defines the planet position)
- I claim that, the Equation was consistent but the disturbance is found because of Mars immigration caused many disturbance for this equation

Conclusion

The Equation supports the claim that there's a relationship between planet diameter and orbital distance.

Please review

Gerges Equations For Solar Group Geometry

<http://vixra.org/abs/1906.0564>

1-3- Earth Moon Diameter Creation As Example

I-Data

Group No. 1

A- The Sun Diameter x The Moon Diameter = Jupiter Orbital Circumference

B- Jupiter Circumference x the Moon Circumference = Jupiter Orbital Circumference

C- Mars Circumference x The Moon Circumference = Mars Orbital Distance

D- 43000 km x The Moon Diameter = Earth Orbital Distance

(43000km = The distance between Perigee and Apogee points in the moon orbit- and we know that the moon moves from perigee to apogee only and that means the value 43000 km is the freedom distance in which the moon can move)

E- Venus Diameter x The Moon Diameter = Earth Venus Distance

Group No. 2

I- Moon Circumference x 86400 seconds = 940 mkm (Earth orbital Circumference)

II- Moon Circumference x 27.3 days = 300000km (Light motion for 1 second)

III- 43000 km x 27.3 days = 1.16 mkm

II-Discussion

Form the previous Data we can conclude that – the matter is A Rate –

It's a result of relationships

As a born child – who's born by his parent marriage –

The matter is born based on relationships are found before this matter birth

Let's discuss the Data group No. 2

I- Moon Circumference x 86400 seconds = 940 mkm (Earth orbital Circumference)

The equation tells us – if Earth revolves around the sun one complete revolution on one day only – the moon circumference will be = a distance of Earth Motion for 1 second only

II- Moon Circumference x 27.3 days = 300000km (Light motion for 1 second)

The equation tells us if the moon rotates around its axis once daily – so the moon during his orbital period will pass a distance = a distance the light passes during 1 second

I wish we see the huge number of relationships relative to one value only (moon diameter and circumference)- such relationships can't be created by any pure coincidences – on the contrary – it's found basically because the matter is a rate produced by many relationships – i.e. the matter is a product found by cooperation from many players – this explanation is more near to the truth and supported by this paper all data.

Please review "Why Jupiter Diameter-142984 km (2)" <http://vixra.org/abs/1907.0321>)
