

# The Earth Does Not Spin

Nathaniel Barker

14/8/19

## 1 How to tell it does not spin blowing things and moving things

im sure the earths rotation is not real because how could we survive on a planet spinning at 3000 miles per hour  
simple answer we cant

### 1.1 Arguement

i just googled earth rotational velocity it is a 1000 miles per hour gravity is not strong enough to keep us on earth

### 1.2 CounterArguement

it is like a train moving at constant speed you will not feel force of movement

### 1.3 Arguement

it is not like a train, on a train we are inside, which protects us from wind of it what protects us from the wind what protects us from 1000 miles per hour winds on earth  
think why isn't there 1000mph winds why are there not constant 22 mph winds on earth

### 1.4 CounterArguement

it is like in figure skating more they put their arms out the slower they spin the closer they draw their arms in the faster they spin

### 1.5 Arguement

we are on the ground which is where angular momentum would be the strongest so where are the winds?

### 1.6 CounterARguement

the main axis of the earth is the core  
the bacteria on the skin of the figure skater isn't flung out into the air when they draw their arms in we do not fly off of the earth.

### 1.7 Arguement

you expect me to believe we are just too small to be effected by powerful winds?  
bacteria feel wind even more than a skater

## 1.8 Arguement

The atmosphere rotates around the earth with us

## 1.9 Counter

if it rotates with the earth were is the wind

## 1.10 Arguement

The mass of atmosphere rotates with the air, but it is not a solid medium, there are air currents and winds within the overall shifting mass.

## 1.11 Counter

the wind would have to rotate with it if the winds are not consistent that means earth is not rotating

where is the constant 20 mph wind moving every thing its not like it just does not exist

how can you not constantly feel the wind or constantly see it moving things

all air should be wind if we are constantly spinning when things spin and rotate they create wind and pressure there has to be a wind

## 1.12 Final

it is obvious earth cannot rotate from regular observations

## 2 How they will say it spins

they believe in the mainstream theory that he earth rotates,they probably believe in whatever academia tells them because they are a pseud

### 2.1 Arguement

Planes go 500+ mph and you can sip a glass of water midflight without it spraying into a fine mist

### 2.2 Counter

planes dont fly they distort and move through space

### 2.3 Arguement

I am going East at X miles an hour. The air is also going East at X miles an hour. The air and I are going the same speed.

How much wind do I feel?

### 2.4 Counter

X amount of wind

### 2.5 Arguement

instead of day and night there would be months of day and months of night

## 2.6 Counter

light and heat bounces around in atmosphere this is why global warming happens
