The Importance of the Numbers 17 and 71 in MHCE8S Theory

George R. Briggs

Abstract: In MHCE8S theory 171.7 GeV is the undoubtably correct 4-digit mass of the top quark and 7.1 MeV is the correct sum mass of two Up neutron quarks, or 3.5500 MeV each, which establishes the correct 5-digit mass for the neutron.

The correct\(^1\) 4-digit top quark mass is without doubt \textbf{171.7 GeV}. Also\(^2\) use of \textbf{7.1 MeV} for the mass of the 2 Up quarks of the neutron results in the most accurate value (5-digits) we have for the mass of the neutron \textbf{(939.56 MeV)}.
