### Abstract

#### The Paper Hypothesis:

Because of **The Sun Creation**- Mars had immigrated from its original orbital distance (84mkm) to its current one (227.9 mkm)- after its Immigration– Mars had created configurations for its Data with the other planets –i.e. – Many Planets had changed their (own) data to be in configuration with Mars Data (Orbital Distance) – and because of these Data changes we could - through Planets Data analysis - conclude and prove Mars Immigration event through the solar system history.

#### Mars Immigration Theory Revision:

- Mars original orbital distance was 84 mkm. and Mars had immigrated from it to its current orbital distance 227.9 mkm
- Through Mars Motion from 84 mkm to 227.9 mkm, Mars had collided with Venus and then Mars had collided with Earth also.
- From the Collisions debris The Earth Moon was created –and Mars had found its moons. And the rest debris had attracted by Jupiter and created **The Asteroid Belt**

**The Giant-Impact Hypothesis** is in consistency with **Mars immigration theory**

#### But

- Instead of the (Supposed Planet) **Theia**, Mars itself made the collisions- and caused the Earth –Moon Creation – through Mars Motion from (84 mkm) to (227.9 mkm)

**Mars Immigration Theory** solves The **Giant-Impact Hypothesis difficulties**:

- I. **Why Venus Has No Moon?** – Because Mars had immigrated and moved from 84 mkm to 227.9 mkm and pushed all debris in its motion direction – **far from Venus** – So Venus had found no debris around to create its own Moon - But Earth has a greater Mass and the debris lost their motion high momentum at Earth Position– so Earth could attract some debris and create its moon
- II. **The Lunar Magma Ocean (LMO) Origin– is Venus** – because the moon is created by 3 planets debris (Venus – Earth – Mars) – So their rocks are found in it

1 III. **Why The Iron Oxide (Feo) of the Moon= (13%)? Because** The rate (13%) is a  
2 middle between Mars rate (18%) and the terrestrial mantle (8%).  
3

4 **IV. Why Mars diameter (and Mass) are decreased through the history? Because**  
5 of the collisions – Mars diameter lost around ( 4.1 %) (And Mars mass also which  
6 causes difficulties for Mars gravitation equation)  
7

8 **V. Mars Immigration** is done **Because of The Sun Creation Process**  
9

10 **VI.** Is there a possibility that Mars will return to its original point (84 mkm)? **Yes**  
11

12 **VII. Why?** Because the Planet orbital distance is defined relative to its diameter (and  
13 Mass) –Mars now is in **the wrong Position-** but forced to still because of the sun  
14 effect.  
15

## 16 **A Conclusion**

### 17 **The Giant-impact hypothesis supports Mars Immigration Theory**

18  
19

#### 20 **The Paper Objectives:**

21

##### 22 **(1<sup>st</sup> Objective) :**

23 The paper tries to prove that – many of the other planets data is changed as a result of  
24 Mars immigration – and because of that – Mars Immigration event is recorded in  
25 different planets data which help us greatly to prove my theory (Mars Immigration  
26 Theory)  
27

##### 28 **(2<sup>nd</sup> Objective) :**

29 Based on the previous proves – the paper provides us a new vision toward the solar  
30 system – it's no longer be separated planets from each other – on the contrary – we  
31 may conclude easily that – the solar system is one building and each planet is a part  
32 of this same building – or the solar system is one machine and each planet is a gear in  
33 this same machine

34 This new vision toward the solar system provides us a decisive advantage in the solar  
35 system understanding and study –because this vision tells us that –the planets data are  
36 created depending on each other – the solar system becomes one Trajectory of  
37 Energy and each planet is a point on it. And because of that each planet data is  
38 created relative and complementary to the other planets data which can help us to see  
39 the solar system geometrical structure depth.  
40  
41

1 **1- Introduction**

2 Let's start with the question immediately

3 Why does Mars Orbital Inclination 1.9 degrees depend on Mars Daily Motion?

4 Mars moves per a solar day = 0.524 degrees

5 **1.9 degrees = 1/ (0.524 degrees)**

6  
7 The question is Why? a clear question!

8  
9 ***How Can Mars Daily Motion effect on Mars Orbital Inclination?***

10 Do that repeat with any other planet??

- 11 - The Earth Moon moves daily =13.18 deg. but its orbital inclination =5.1 deg.  
12 - Venus moves daily =1.6 deg. but its orbital inclination =3.4 deg.  
13 - Mercury moves daily =4.09 deg. but its orbital inclination =7 deg.  
14 - Jupiter moves daily =0.081 deg. but its orbital inclination =1.3 deg.  
15 - Saturn moves daily =0.033 deg. but its orbital inclination =2.5 deg.  
16 - Uranus moves daily =0.0117 deg. but its orbital inclination =0.8 deg.  
17 - Neptune moves daily =0.006 deg. but its orbital inclination =1.8 deg.  
18 - Pluto moves daily =0.0039 deg. but its orbital inclination =17.4 deg.

19 Simply **NOT**

20 But –**The Rate 1.9 Is Used Frequently In Mars Data As Following:**

- 21  
22 - 227.9 mk (Mars current orbital distance) = 120 mk (Venus Mars distance) x 1.9  
23 - 149.6 mk (Earth orbital distance) = 78.3 mk (Earth Mars distance) x 1.9  
24 - 78.3 mkm (Earth Mars distance) = 41.4 mk (Venus Earth distance) x 1.9

25 **Also**

- 26 - 25.2 deg. (Mars Axial Tilt) =13.18 deg. (The Earth Moon motion daily) x 1.9  
27 - 687 days (Mars orbital Period) = 365.25 days (Earth orbital period) x 1.9  
28 - Earth diameter 12756 km = Mars diameter 6792 km x 1.9

29 **Also**

- 30 - 7 deg. (Mercury orbital inclination) = 5.1 deg (the moon orbital inclination) + 1.9  
31 deg (Mars orbital inclination)

32  
33 Regardless the Equations meanings – I try to shows the frequent using of the rate 1.9

34 The simple question is Why? And

35 Because  $1.9 = (1/0.524)$  – the question – Why? - be more serious

36 **The Paper Claim**

37 Planets Different data recorded Mars Immigration Event –and because of that –

38 (1<sup>st</sup>) Mars Immigration is a fact and a real event

39 (2<sup>nd</sup>) the solar system is one building and each planet is a part of this same building

40 The paper tries to prove its claim..

41  
42 **The Paper Contents**

43 3- Mars Immigration Proves Revision (5 Proves)

44 4- Why had Mars immigrated with the Sun Creation?

45

1 **2- Methodology**

2 I use the planets data analysis to discover the laws and rules based on which the  
3 planets are created and move.

4 What does that means specifically:

5 **Shortly**

6 1- I compare between the planets data and the physics acceptable theories to see if  
7 there's a consistency between both

8 2- I compare between the planets data with each other to see if they are independent  
9 or dependent on each other..

10  
11 **What's The Useful Concept Behind?**

12 I claim that

13 I. The solar system is one building and each planet is a part of it – that means –  
14 each planet data (must be created) depending on other planets data and  
15 complementary to them

16  
17 II. As any geometrical structure – say as a house – there's a wall and floor – and  
18 also a roof – these components were created relative to each geometrically to  
19 perform the house together

20  
21 That's perfectly My Basic Concept behind "The Planets Data analysis"

22 Because

23  
24 III. I claim any planet data is created relative to and complementary with other  
25 planet data – and because of that – the planets can be concluded from each  
26 other and based on other

27 **Shortly**

28 IV. There's **ONE EQUATION ONLY** express all solar planets data- the planets  
29 data works as mirrors for each other and they reveal each other and for that  
30 reason we can conclude any historical event through the planets data analysis

31 That's Why

32 V. Mars Immigration Event Analysis is so important in The Solar System Study  
33 – because – this analysis will prove that –the solar system is NOT separated  
34 planets from each other – NOT True – the solar system is one Trajectory of  
35 Energy and Each planet is a point on it

36  
37 If we can prove that – what a big deal behind?

38  
39 VI. Based on that – we can conclude the following:

40 The Solar System moves one unified motion as the train motion – that means  
41 – all planets move together one unified general motion as the train moves  
42 with its all carriages together (**Train Motion Concept**)

### 3- Mars Immigration Proves Revision (5 Proves)

(1<sup>st</sup> proof) The Giant –Impact Hypothesis (The Geological Proves)

(2<sup>nd</sup> proof) The Planets Order Analysis

(3<sup>rd</sup> proof) Mars Immigration Results

a- The Earth Moon Creation

b- Mars Moons Creation

c- Mars Diameter (and Mass) decreasing

d- The Asteroid Belt Creation

(4<sup>th</sup> proof) Planet Effect On Its Neighbor

(5<sup>th</sup> proof) Mar Immigration Motion Direction

(1<sup>st</sup> proof) The Giant –Impact Hypothesis (The Geological proves)

As the paper abstract shows how Mars theory is in consistency with The Giant- Impact hypothesis – also Mars immigration theory answers many basic questions face the giant –impact hypothesis –as we have discussed–

**Why Venus has no moon?**

because Mars Motion was from the point (84 mkm) to (227.9 mkm)– so the direction of Motion is defined - and Mars Motion pushed all debris to move with Mars that made a wave pushed all debris far from Venus – So Venus Couldn't create a moon for it. then these debris lost their high motions momentum when reach to Earth position and because Earth mass is greater than Venus – Earth could attracted some debris and created from them its moon –

Mars Moons supports this description because Mars with small mass could attracted 2 moons – How?

Because the debris high momentum is lost already, and its motion became so weak even Mars could attracted its moons –

Also the rest debris was attracted by Jupiter and created The Asteroid Belt.

Please review **The Giant –Impact Hypothesis** -

**The Lunar Magma Ocean (LMO) Origin– is Venus** –

This solution is so important, it solves a serious difficulty – as explained before

Now the question is why Mars had immigrated when the sun is created? we have to discuss that later...

**Why Mars original orbital distance was 84 mkm?**

Because the planet orbital distance depends on its diameter and mass – but the order is disturbed by Mars immigration and we don't see it now – the planets order analysis we should discuss in the following point...

1 **(2<sup>nd</sup> proof) The Planets Order Analysis**

2 Mars immigration theory is born basically based on the planets order analysis

3  
4 *(Mercury – Venus – Earth)*

5 This order of planets shows an order in planets diameters, masses and orbital distance  
6 – the order rule is

7 **A Greater Diameter Or Mass Needs A Greater Orbital Distance**

8

9 If this order controls all planets so Mars should be the second planet after Mercury –

10 But –

11 *(Jupiter – Saturn – Uranus – Neptune – Pluto)*

12 the outer planets order shows that the rule depends on planet diameter (and not mass  
13 because Uranus Diameter is greater than Neptune but less Mass) and the rule is  
14 reversed from the previous one

15 i.e.

16 **A Greater Diameter Needs A Shorter Orbital Distance –**

17 This analysis refers to that Mars may be found in a wrong position in the planets  
18 order and this wrong position causes a disturbance for the planets order – based on  
19 this analysis Mars immigration theory can be concluded ... to get **the correct answer**  
20 we need to know if **There's A Real Relationship Between Planet Diameter And**  
21 **Orbital Distance.** –

22

23

1 **(3<sup>rd</sup> proof) Mars Immigration Results**

2 a- The Earth Moon Creation

3 b- Mars Moons Creation

4 c- The Asteroid Belt Creation

5 d- Mars diameter Decreasing (4.1%)

6 e- Mars Mass Decreasing (4.1%)

8 Simply we have a reason to answer Why Venus has no moon but Mars (mass =1/13)  
9 has 2 moons?!

10 The fact shows itself clearly – there were no debris around Venus to create a moon!  
11 But Mars had!? Why? because of the Motion Direction

12  
13 Mars had moved from the Point (84 mkm) to the point (227.9 mkm) from the sun and  
14 pushed all debris with it in the same motion direction – so no debris left around  
15 Venus – because all debris had moved with Mars in its Motion Direction

16  
17 Now if we practice such event – what expectation we may conclude?

18 Mars Diameter (and Mass) must be decreased

19 i.e.

20 Mars Diameter (and Mass) must be decreased than their values when Mars was in its  
21 original orbital distance (84 mkm)

22 **Can this conclusion be proved?**

23 The gravitation Equation works only with Saturn and Jupiter Masses – where

$$\frac{(\text{Saturn orbital distance})^2}{(\text{Jupiter orbital distance})^2} = \frac{\text{Jupiter Mass}}{\text{Saturn Mass}} = 3.4$$

24  
25  
26  
27  
28 **If Mars Mass is increased by 4.1% the gravitation equation can work**

$$\frac{(\text{Mercury orbital distance } 57.9 \text{ mkm})^2}{(\text{Mars original orbital distance } 84 \text{ mkm})^2} = \frac{\text{Mars Mass } 0.668}{\text{Mercury Mass } 0.33}$$

32  
33 (Equation Error 3.4%)

34 **Question (1)**

35 **Why don't all planets follow the gravitation equation?!**

36 Because of Mars immigration which caused disturbance for the planets order

37 **Question (2)**

38 Is there any proof that Mars Diameter is decreased by the same rate (4.1%) **Yes**

39 Mercury orbital distance 57.9 mkm = Mercury Diameter 4879 km x 10<sup>9</sup>

40 Earth orbital distance 149.6 mkm = Earth Diameter 12756 km x 10<sup>9</sup>

41 Saturn orbital distance 1433.5 mkm = Saturn Diameter 120536 km x 10<sup>9</sup>

42 Mars (org) orbital distance 84 mkm = Mars (org) Diameter 7070km x 10<sup>9</sup>

43  
44 **(Mars Diameter 7070 km is increased than the Mars registered diameter 6792 km**  
45 **with 4.1%)**

1 **(4<sup>th</sup> proof) Planet Effect On Its Neighbor**

2 Let's summarize the idea in following...

- 3  
4 - I claim each planet effect on its neighbor planet data and motion  
5 - I provide data shows such effect (for example Earth effects on Mars Motion)

6 So

- 7 - If we have found data claiming that – Mars Motion is effected by Mercury Data –  
8 so this data may refer to that – Mars was a neighbor of Mercury

9 **I- Data**

10 (1)

11  $687 \text{ days (Mars orbital period)} = 365.25 \text{ days (Earth orbital period)} \times 1.9$

12  $687 \text{ days (Mars orbital period)} = 27.3 \text{ days (The moon orbital period)} \times 25.2$

13 But 25.2 degrees = Mars axial tilt and 1.9 degrees = Mars orbital inclination

14 Also  $25.2 \text{ deg (Mars axial tilt and)} = (1.9 \text{ deg. Mars orbital inclination}) \times 13.18 \text{ deg.}$

15 Where

16 The moon motion degrees daily = **13.18 degrees**

17 We should not limit our discussion for just Data consistency – let's see its depth

18 Because

19 Mars moves per solar day = 0.524 degrees (=360 degrees /687 days)

20 The value 0.524 degrees = (1/1.9) where 1.9 degrees = Mars orbital inclination

21 i.e.

22 Mars Data (25.2, 1.9, 0.524 ...etc) depends on the solar day period of time

23 (2)

24  **$4331 \text{ days (Jupiter orbital period)} = 687 \text{ days (Mars orbital period)} \times 2 \pi$**

25 **II-Discussion**

26 The previous data shows that Earth and moon on one side and Jupiter on the other  
27 side all of them effect on Mars orbital period (i.e. effect on Mars Motion)

28 **More Data**

29 **Equation No. (1)**

$$\left(\frac{\text{Mercury Diameter}}{\text{Mars Diameter}}\right)^2 = \frac{\text{Mars Mass}}{\text{Mercury Mass}} = 0.524$$

30  
31 **Equation No. (2)**

$$\frac{\text{Mars Orbital Period } 687 \text{ days}}{\text{Mercury Day } 175.94 \text{ days}} = \frac{\text{Mars Orbital Distance } 227.9 \text{ mkm}}{\text{Mercury Orbital Distance } 57.9 \text{ mkm}} = 3.93$$

32  
33 **Equation No. (3)**

$$\frac{\text{Mars Day } 24.7 \text{ hours}}{\text{Earth Day } 24 \text{ hours}} = \frac{\text{Earth Orbital Period } 365.25 \text{ days}}{\text{Moon Synodic Year } 354.36 \text{ days}} = 1.029$$

34  
35  
36  
37 **Equation No. (5)**

38  **$7 \text{ deg. (Mercury Orbital Inclination)} = 1.9 \text{ deg. (Mars Orbital Inclination)} + 5.1$**   
39  **$\text{deg. (Earth Moon Orbital Inclination)}$**

- 1 **(5<sup>th</sup> proof) Mar Immigration Motion Direction**  
2 Let's summarize the idea in following  
3 - The solar system has one defined motion which is the planets revolution around  
4 the sun  
5  
6 - Mars Motion from (84 mkm) to (227.9 mkm) is a new direction of Motion is  
7 unknown in the solar system  
8  
9 - In this point I refer to another motion started from Jupiter to Pluto – and this  
10 motion is in the same direction of Mars immigration Motion which makes Mars  
11 immigration Motion is a defined motion in the solar system and not a unique one  
12  
13 Please review Jupiter Data Analysis in my previous paper  
14 **The Giant-impact hypothesis supports,, Mars Immigration Theory,, (III)**  
15 <https://vixra.org/abs/2003.0521>  
16  
17  
18

**4- Why had Mars immigrated with the Sun Creation?**

The answer is consisted of 3 parts

4-1 Because the Cycle 27.3 days should control Mars New Motion

4-2 Because The Rate 1.9 should control Mars new Motion

4-3 Because of Uranus Effect on The Sun Creation Process

**4-1 Because the Cycle 27.3 days should control Mars New Motion**

**I-Data**

**Group (I)**

(1)

30589 days (Uranus orbital period) = **27.3 days (Earth Moon orbital period)** x **1120**

(2)

113.45 deg (Earth axial tilt on vertical level) x  $\pi^2$  = **1120**

(3)

687 days (Mars orbital period) = 27.3 days (Earth Moon orbital period) x 25.2

(25.2 deg = Mars axial tilt)

**Group (II)**

- Mars Axial Tilt = 25.2 degrees (on the horizontal level)
- Mars Axial Tilt = **115.2** degrees (on the vertical level  $115.2 = 25.2 + 90$ )
- Mars Axial Tilt = **205.2** degrees (where  $205.2$  degrees =  $115.2 + 90$ )

But

- Saros Shift angle = 115 degrees .....And
- Saros Cycle 6585.39 days =  $115 \times (180/\pi)$

Why Venus diameter is so specific one?

**Because**

- **The sun diameter = 115.2 x Venus Diameter**
- **The sun diameter = 205.2 x Mars Diameter**

**Group (III)**

(1)

25920 mkm = 27.3 x 949 mkm (940 mkm = Earty orbital circumference error 1%)

(2)

- 25920 mkm =  $180 \times 144$  mkm and  $180 \text{ mkm} \times 0.8 = 144$  mkm
- $144 \text{ mkm} \times 0.8 = 115.2$  mkm
- $144 \text{ days} \times 0.587 \text{ mkm / day (Uranus velocity)} = \mathbf{84 \text{ mkm}}$
- $144 \text{ mkm} = 5.1 \times 28.3$  (5.1 deg = the moon orbital inclaintion – 28.3 deg = Neptune axial titl)  **$-(25.08)^2 = 627$**

**Discussion**

Light with known velocity (0.3 mkm/sec) travels during a solar day (86400 s) a distance =25920 mkm

**Why Mars Had Immigrated When The Sun Cration?**

**Because of the Cycle 27.3 days**

The cycle 27.3 days is defined by Uranus Equation

1 30589 days (Uranus orbital period) = 27.3 days (Earth Moon orbital period) x **1120**  
2 Please remember – Uranus is the master here  
3 The Cycle 27.3 days is defined by Uranus Cycle – and Uranus defines Mars Motion  
4 data (180 mkm -144 mkm -115.2 mkm) – so the Cycle will control Mars New motion  
5 The Cycle (27.3 days) control Earth Motion by Earth axial tilt (through**1120**)  
6 (113.45 deg Earth axial tilt vertically) level) x  $\pi^2$  = **1120**  
7 **Now**  
8 687 days (Mars orbital period) =27.3 days (Earth Moon orbital period) x 25.2  
9 (Where **25.2 degrees =Mars Axial Tilt**)  
10 But  
11 The Value **25.2 degrees =Mars Axial Tilt** is defined based on Mars & Venus  
12 diameters rates relative to the sun diameter  
13 So the value **25.2** is defined already and the cycle 27.3 days is forced by Uranus –  
14 The master of everything here  
15 So **Mars had to have the orbital period 687 days –**

#### 16 17 **4-2 Because The Rate 1.9 should control Mars new Motion**

18 Let's summarize the idea in following:

- 19 - The rate 1.9 is a genetic instruction transported from planet data to another till  
20 reach to Mars – why? to create Mars orbital inclination =1.9 degrees! Why? to  
21 force Mars to move per solar day 0.524 degrees – Why? because this is the  
22 available Motion for Mars defined by the solar system geometry  
23

#### 24 **I- Data**

- 25 (1) Earth diameter 12756 km = Mars diameter 6792 km x 1.9  
26 (1.9 degrees = Mars orbital inclination)  
27 (2) Earth diameter 12756 km = **Mars (original) diameter 7070 km** x 1.8  
28 (1.8 degrees = Neptune orbital inclination)  
29 (3)  
30 1.9 deg = Mars orbital inclination = 1.8 deg = Neptune orbital inclination +**0.1 deg**  
31 (4) Neptune Diameter 49528 km = **Mars (original) diameter 7070 km** x 7

#### 32 **II- Discussion**

33 Mars orbital inclination 1.9 deg – is defined based on Neptune orbital inclination with  
34 addition **0.1 deg** – the rate 1.9 is found between Mars (new) diameter and Earth  
35 diameter – that means – Mars Diameter decreasing was done based on geometrical  
36 rule – Mars diameter is done by collisions with Venus and Earth but Not by random  
37 process – on the contrary – it's done by geometrical rules – as a surgeon cut arm for  
38 some patient –  
39 Now because Mars orbital period =687 days (defined by Uranus effect) and Mars  
40 motion daily =0.524 degrees (defined by Uranus effect) –as a result Mars (new)  
41 orbital distance =227.9 mkm  
42 Uranus is the master and did all – as we will see in following...

1 **4-3 Because of Uranus Effect on The Sun Creation Process**

2 **I- Data**

3 (1)

4 Venus Diameter 12104 km = Mars diameter 6792 km x  $\sqrt{\pi}$

5 (2)

6 3.4 degrees (Venus orbital inclination) x 0.524 degree =  $\sqrt{\pi}$

7 (3)

8 177.4 deg (Venus axial tilt) = 100 x  $\sqrt{\pi}$

9 (4)

10 180.8 degrees = 177.4 deg (Venus axial tilt) + 3.4 deg (Venus orbital inclination)

11 (5)

12 Mars moves during Venus days (116.7 days) a distance =243 mkm = Mercury

13 Motion during Mercury rotation period (58.66 days)

14 (6)

15 116.7 deg (Saturn axial tilt vertically) =26.7 deg (Saturn axial tilt horizontally) x 4.37

16 (4.37 mkm = the sun circumference)

17 (7)

18 (Nodal Year/ Lunar Sidereal Year) =(Earth Diameter / Venus Diameter)

19 (8)

20 (Lunar Synodic Year / Nodal Year)= (Mercury Radius / Pluto Diameter)

21 (9)

22 687 days Mars orbital period +6.2 days = 2 x 346.6 days (Nodal Year)

23 (3.1 degrees = Jupiter Axial Tilt)

24

25 **II- Discussion**

26 To understand how this data works – we have to discuss the equation No. (4)

27

28 This is the main equation behind all changes happened for Mars and even for many  
29 other planets data

30 Let's try to see its depth in following

31

1 **Equation No. (4)**

2 **180.8 degrees = 177.4 deg (Venus axial tilt) + 3.4 deg (Venus orbital inclination)**

3 (1)

4 What's this 180.8 degrees?

5 It's Uranus orbital inclination (0.8 degrees)

6  $0.8 \text{ degrees} + 90 + 90 = 180.8 \text{ degrees!}$

7 What does that mean?

8 Uranus is perpendicular on Earth Moon orbit – we discussed that before

9  $97.8 \text{ degrees (Uranus axial tilt)} - 6.7 \text{ degrees (Earth Moon axial tilt)} = 91.1 \text{ deg}$

10 Not perfectly perpendicular – how to be equal 90 degrees? We discussed that before

11 Now

12 The sun is perpendicular on Earth...!

13 That means – the Sun and Uranus are 2 points on the same straight line – for that  
14 reason the value 180.8 degrees is seen

15 (2)

16  $90000 \text{ mkm} = C^2$  when?? When the time =1 second

17  $90000 \text{ mkm} = \pi^3 \times 2872.5 \text{ mkm}$  (Uranus Orbital Distance)

18 where  $\pi^3 = (\text{Uranus axial tilt} / \text{Jupiter axial tilt})$

19 The Sun rays are produced from  $C^2$

20 That means – the sun is created with the distance 2872.5 mkm – i.e. the sun and the  
21 distance 2872.5 mkm are created together in the same equation – and that makes  
22 Uranus is the first planet connected with the sun after creation

23 This is the reason – Why Uranus is the governor of the heaven!

24 (3)

25 Let's return to the equation

26 **180.8 degrees = 177.4 deg (Venus axial tilt) + 3.4 deg (Venus orbital inclination)**

27 Venus data (axial tilt and orbital inclination) are created based on Uranus orbital  
28 inclination- So the value 180.8 degrees is transported to Venus

29 Shortly –

30 Uranus sent to Venus his instruction and Venus told Mars them!

31 How??

32 **179.9 degrees = 177.4 deg (Venus axial tilt) + 2.5 deg (Saturn orbital inclination)**

33 So **180.8 degrees - 179.9 degrees = 0.9 degrees !!**

34 About what we fight here?

- 1 About **0.1 degrees**
- 2 Please remember
- 3  $1.9 \text{ deg} = \text{Mars orbital inclination} = 1.8 \text{ deg (Neptune orbital inclination)} + \mathbf{0.1 \text{ deg}}$
- 4 Why we need it?
- 5 Because by the rate  $1.9 - \text{Mars (New) diameter} = 6792 \text{ km}$  will be created and then
- 6 Mars will remember forever that he has to move daily  $0.524 \text{ degrees}$
- 7 And what we have? **0.9 degrees !!** So
- 8  $\mathbf{1 \text{ degree} = 0.9 \text{ degrees} + 0.1 \text{ degree}}$
- 9 **Where is the 1 degree??**
- 10 Let's tell the story
- 11 Mercury Axial Tilt was **1 degree** and Pluto was Mercury Moon – in that time – Mars
- 12 was the next planet after Mercury – Venus axial tilt was  $(\pi)^{1/2}$
- 13
- 14 With The Sun Creation – some great changes were done – as following:
- 15 - Mercury axial tilt became  $0.01 \text{ degrees}$
  - 16 - Venus axial tilt received this difference to save the planet data for that  $(\pi)^{1/2} =$
  - 17  $1.774 \text{ degrees}$  became  $177.4 \text{ degrees}$
  - 18 - The decreasing of Mercury axial tilt from  $1 \text{ degree}$  to  $0.01 \text{ degree}$  forced Pluto
  - 19 to move far from Mercury with  $1 \text{ orbital distance (57.9 mkm)}$  for each point of
  - 20 the difference from  $1$  to  $0.01$  that means Pluto had to move  $57.9 \text{ mkm} \times 100$
  - 21 - One more important change was happened – the basic value  $180 \text{ degrees}$  is
  - 22 changed to be  $179.9 \text{ degrees}$  – that means – no any triangle (for example) in
  - 23 the solar system its angles total  $= 180 \text{ degrees}$  – No one – the solar system lost
  - 24 already the value **0.1 degree** and because of that the solar system machine has
  - 25 to depend on the value **179.9 degrees** which is created by Venus & Saturn
  - 26 cooperation.
- 27 Let's remember the question...what's this **1 degree?** Mercury Axial Tilt – no
- 28 longer is found- but what- is it removed from the geometrical structure?- No it works
- 29 in the solar system geometrical structure but not seen as the other data – Mercury
- 30 kept its impression – **360 mkm = Mercury orbital circumference = 360 degrees**
- 31 *Also based on Mercury (supposed) axial tilt (1 degree) Jupiter diameter is created*
- 32 *1 million km / 7 = 142984 km = Jupiter diameter*
- 33 *Also Jupiter orbital circumference 4879 mkm = Mercury diameter 4879 km x 1*
- 34 *mkm*

1 (4)

2  $97.8 \text{ deg (Uranus axial tilt)} = 90 + 7.8 \text{ degrees}$

3  $7.8 \text{ deg} = 7 \text{ deg (Mercury orbital inclination)} + 0.8 \text{ deg (Uranus orbital inclination)}$

4 The previous equation shows Uranus effect on Mercury orbital inclination

5 **Shortly**

6 The inner planets were effected by the sun creation process – and this effect is done  
7 by Uranus effect on the inner planets data

8 (5)

9 Saturn is Uranus right hand –

10 Through Saturn and based on it Uranus can practice its great effect on the inner  
11 planets

12 That explains why Saturn Orbital Distance = Saturn Uranus Distance

13 (6)

14 That may explain the equation **No. (6)**

15  $116.7 \text{ deg (Saturn axial tilt vertically)} = 26.7 \text{ deg (Saturn axial tilt horizontally)} \times 4.37$

16  $(4.37 \text{ mkm} = \text{the sun circumference})$

17

18 **Shortly**

19 Mars New Motion is defined before Mars immigration and the planets data was  
20 changed to work as bridge to transport the defined motion from Uranus to Mars

21 This process is done basically depend on Venus and Saturn

22 That explain

23 Why Mars orbital circumference = Saturn orbital distance

24 That also can explain the following data

25 - Saturn Diameter 120536 km = Venus Diameter 12104 km  $\times \pi^2$

26 - Saturn Orbital Distance 1433.5 mkm = (Venus Circumference)<sup>2</sup> (Error 1%)

27 - Saturn Mass = Venus Mass  $\times 116.75$  (where **116.75** days = Venus Day Period)

28 - **116.75** deg = 26.7 degrees (Saturn axial tilt) + 90 degrees

29 **Note Please**

30 - In Kepler 3<sup>rd</sup> Law ( $p^2 / d^3 = \text{constant}$ ) – when we use the solar planets data in this  
31 law – the constant will be **=25**

32 - Where Mars axial tilt = 25.2 degrees – and we know that Mercury axial tilt  
33 was 1 degree and because of that  $(25.2 \text{ degrees} / 1 \text{ degree}) = \mathbf{25.2}$

34 - This explains the great configuration between Mars and the other planets after  
35 Mars immigration.

36
