

# **New Physics EM Drive Space Thrusters without Lorentz reaction force and Fermion Crushing using monopole B field interference.**

By Leo Vuijk

Architect, MSc.

Free Energy Laboratories.

## **Abstract,**

The electromagnetic field around a direct current in a wire and the so called Lorentz force, has always been questioned by me and others about the microscopic visualization of individual (string) particle physics. (figure 1)

Now I present my view on EM space flight and Fermion Crushing based on kitchen table experiments and my Q-FFF Rigid Transformer String Theory.

For Fermion crushing by focused B-fields at the end of solenoids can use direct- or alternative currents, due to both interference field symmetries.

**1, for a Tubular Dual Coaxial Solenoid,** (figure 2,3,4)

**2, for a Triple Coaxial Tesla Pancake Coil. (Trifilar coil)** (figure 5,6)

## **Introduction.**

**Hardware:** Dual coaxial Solenoids or Trifilar Tesla coils for Lorentz EM Thruster Levitation effect.

**Standard Physics 1:** “Lorentz force” perpendicular to the magnetic field lines created by a direct current in the magnetic field.

**Standard physics 2:** Magnetic “B field” outside a long solenoid, shows a strong field reduction down to zero (called a B- field) and can be used for Lorentz force based levitation without the usual EM (Electro Magnetic) reaction force. (According to Q-FFF Theory)

Several configurations for effective EM thruster levitation without reaction force are possible like a dual coaxial solenoid (**figure 2**), or in the form of a so called Trifilar Tesla coil. (**figure 3**).

**The origin of both EM Drives is based on the EM B-field effects.**

**The origin of all B field effects (or anti Maxwell dipping zones) is postulated to be created by the microscopic interference of dual magnetic monopole field trajectories of North and South monopole photons.**

**The so called tubular shaped Anti Maxwell field dip (B field ) around a direct current in a wire is a second example of the monopole interference predicted by Quantum FFF Theory rigid string model. See poster. (Figure 1).**

**Future experiments should be able to create alternative configurations Monopole interference based B field phenomena.**

# Anti Maxwell magnetic field reduction close to an electric wire.

Explained by detail observation of iron powder distribution (the ring shaped absence) around a wire or coil. Below: Several observations and explanation by the curvature of monopole quantum information arrays.

According to Quantum FFF theory, all magnetic fields can be presented as DUAL Magnetic Monopole Photon Vector Arrays. These monopole arrays undergo curvature. As a result, the magnetic field intensity around the Earth and a wire is NOT dropping off with the square of the distance from the source!! The field become stronger polarized away from the source (See images). Close to the current transporting wire the magnetic field strength is zero due to the parallel trajectories of North and South Photons before curvature and polarisation of iron powder ( Author: Leo Vuy!)

Figure 1,

## EM Drive Thruster Levitation by EM Monopole interference creating B-field.

Both outside B Fields of the solenoids, have a strong reduction due to monopole interference down to zero (according to Quantum FFF Theory) Therefore, the zero B field of the inner solenoid, has NO Lorentz force reaction effect on the outside solenoid.

The resulting Lorentz force on the inner solenoid depends on both potentials and polarities

Figure 2,

## Dual Coaxial Solenoid for EM Drive Thruster Levitation effect.

Both outside B Fields of the solenoids, have a strong reduction due to monopole interference down to zero (according to Quantum FFF Theory) Therefore, the zero B field of the inner solenoid, has NO Lorentz force reaction effect on the outside solenoid.

According to Quantum FFF Theory based dual magnetic photon monopole model.

According to Quantum FFF theory, all magnetic fields can be presented as DUAL Magnetic Monopole Photon Vector Arrays. These monopole arrays undergo curvature. As a result, the magnetic field intensity around the Earth and a wire is NOT dropping off with the square of the distance from the source! The field become stronger polarized away from the source (See images). Close to the current transporting wire the magnetic field strength is zero due to the parallel trajectories of North as South Photon before curvature and polarisation of iron powder (Author: Leo Vuyk)

Lorentz force on the wire without a magnet reaction force.

TWO (North and South) Monopole Photon trajectories around a current in a wire shown in cross section. Between the two yellow circles both (N+S) trajectories are pointing about parallel. The result: No iron Powder orientation between the concentric circles, as is observed in the lab (see upper photo). This is a firm support for the monopole photon vector array element of Quantum FFF Theory.

The Magic of Fermion- Repelling and Creating Black Hole Horizon

! You need a dark energy oscillating particle Vacuum Lattice combined with a Dark Matter String Nucleus of a Black Hole AND Propeller shaped Rigid Spinning Fermions.

According to Quantum FFF Theory, there is no fermion information loss, only photonic information loss in a black hole. Quantum fluctuations around the BH horizon produce pairs of leptons,  $e^-e^+$  and even compound quarks (d,u, etc. see Fermion 3D string propeller theory - fermion repelling by spin flip). For tripple BH horizons see image nr's 7, 10 and 11. Event horizon=7, Inner photon ring = 10, Outer photon ring = 11. Conclusion The Big Bang did not produce instantly all the Fermions in the univers. Even now lots of Fermions are produced by all BHs even the largest primordial Big bang splinters located outside large galaxies - see also: <http://vixra.org/abs/1410.0039>

Black hole EAT the vacuum lattice with the oscillating Higgs particles. So, the vacuum lattice structure around a black hole could be represented like this. As a result, the new vacuum is thinner or diluted, it has holes, which could be the origin of the Universal HIGGS field. In contrast, my new black hole paradigm says: the origin of vacuum robustness is Dark matter. Dark matter is the proliferation of vast numbers of Black holes around Galaxies. Conclusion, based on Higgs's subtitle, you don't know anything about expansion or contraction of the universe. (Author: Leo Vuyk)

 Result:  $T=28 + 6$  nucleons becomes  $T=34$ . (oct.2013).  
 Future evidence for additional nucleon rings (+6+8 or 10) inside nuclei coded:  $T=50-82$  or  $126$  seems to be possible.

The origin of the Cosmic Alpha System (CS) and Higgs vacuum, by the splitting of the Big Bang Black Hole (BBBH) into smaller Spindler BHs (SBH). The splinter BHs (SBH) separate into smaller evaporating black holes at the Front (LF) which compresses the pressure from the backside alpha BHs (LB). The BHs (LB) are assumed to partly evaporate like BHs (LF) also into a newly formed oscillating Higgs vacuum until the Higgs vacuum pressure stops the evaporation and forms Galaxy-Forming BHs (LF) behind. However single BH will pair (LB) with the nearest other BHs to form DoubleBH systems, which efficiently form Giant Stars and Galaxies (LF) in between (random: Last work).

# The Bouncing Multiverse 2a

According to Quantum FFF Theory, we live inside one of a specific number of Charge Parity symmetric copy universes coming out of a huge ( Axion/Higgs rigid string black hole nucleus = Dark Matter). All copy string particles are guided by long distance (holographic) multiverse entanglement and transformable by mutual collision into all Standard model particles and more. Such as mono-pole bosons or massless Axion/Higgs vacuum particles (Dark Energy), responsible for the Casimir effect and half of all other SM semi pressure forces.

## The Beginning and End of Time.

Multiverse cycle time versus quantities of mass carrying particles, Dark Matter Black Hole particles and Dark Energy Oscillating Vacuum Lattice (Axion Higgs field) particles. All particles and fields are assumed to be based on rigid string particles. Negative and Positive charged Fermions should have propeller shapes with opposite pitch.

A: The end of matter based time. (Big Crunch) All rigid string matter is through merger Super Nova black holes concentrated into one BH nucleus, which is compressed by the remaining-but absorbing- deluting-dark energy vacuum. If the deluted vacuum pressure comes into equilibrium with the total internal string tension of the nucleus, the Big Bang BH splits symmetrical into 8 or 12 entangled BH nuclei.

B: The beginning of matter based time and the splitting of the Big Bang Black Hole string nucleus into series of minor secondary primordial BHs, building the fractal shaped Lyman Alpha Forest and the start of dual pairing BHs into primordial Herbig Haro systems with vast galaxy formation in between.

All New physics BHs (even micro interference BHs) are postulated to create not only pair production at the horizon, but even entire protons. (plasma)

C: The end of primary Big Bang black hole splitting and the end of vacuum expansion (vacuum inflation)

D: The Total number of particles during the cycle process is constant.

Micro Comets (micro black holes)

- 1: Gravity is a dual pressure force of pushing Gravitons opposing the stronger Casimir vacuum pressure..
- 2: The vacuum has resistance for ALL Fermions motion.
- 3: Black Holes attract but also repel Fermions close by.
- 4: The cyclic Raspberry multiverse has 8 or 12 symmetric anti copy universes entangled at QUANTUM SCALE as the origin of Inertia and Consciousness.

Each chiral lattice has the Planck length and is supposed to be equipped with at least two oscillating massless new Higgs particles.

Black holes EAT the vacuum lattice with the oscillating Higgs particles.  
 So, the vacuum lattice structure around a black hole could be represented like this.  
 As a result, the near vacuum is thinner or diluted, it has holes, which could be the origin of the Universal HUBBLE redshift.  
 By contrast, my new black hole paradigm says: the origin of universal redshift is Dark matter.  
 Dark matter is the proliferation of vast numbers of Black holes around Galaxies.

The Wavefunction collapse in the (CP symmetric) raspberry multiverse by the entangled observation between (anti) copy particles

According to Quantum FFF Theory, the collapse of the wavefunction is assumed to be triggered by particle collisions with instant entanglement between (anti-)COPY universes. So there is Charge and Parity symmetry between the entangled particles living in opposing universes. Each particle is its own observer!! Each human has to deal with one or more opposing anti-COPY humans.
