

Images for Gravitational Lensing and unknown phenomena of universe

Somnath Chakraborty

Khano High School(Galsi, purba burdwan,India)

On 09/05/20 , these photos were captured by me in between 6:40 p.m to 7:10 p.m on the sky of purba burdwan. The region of picture collection was near to Ursha Major star cluster. In these images there are images of gravitational lensing, the location of this positions are marked by red dot on screenshot picture. The original pictures are also attached in this pdf. The Gravitational lensing objects show a interesting phenomena which are clear in the nine images.
