

What is Wrong with Current Physics, to Explain Ball Lightning.

Leo Vuyk, MSc.
Architect, the Netherlands.

Abstract,

The Q-FFF Theory based Herbig Haro dual black hole interpretation seems to be responsible for new physics forming massive Fermions out of the vacuum even by dual Ball Lightning micro black holes, due to the assumption the Ball Lightnings are the same as microscopic Black Holes.

All black holes (micro and macro) are supposed to be equipped with a string nucleus compacted by the vacuum (Casimir) pressure effect.

The Hawking Penrose interpretation of a Black Hole is assumed to change our physical life as a whole, by the creation and use of Dual Ball Lightning systems, resembling micro Herbig Haro black hole systems in space.

Fermion and plasma production out of the vacuum Axion string vacuum particles is supposed to be obtained by Axion-Higgs field vacuum particle collision at the the Penrose "Trapped Space Surfaces" around each Black Hole.

The Penrose Trapped space horizon can be compared to a particle collider creating e^- and e^+ pairs.

Positive charged U- Quarks are the first Quarks to be formed by compounded additional photons to the pairs and D-Quarks come later, due to the chirality of both Fermions and the oscillating fluxtube vacuum.

As a result, each Ball Lightning is equipped with two charged layers, both outside the light horizon.

There is a positive charged layer inside the Negative charged layer of electrons at the outside, of the Ball Lightning, with plasma formation in between.

As a consequence the Big Bang is not assumed to be Hot, but a cold explosion of Axion string evaporating chunks of string based black holes which became responsible for mass/fermion production.

Recently Roger Penrose did speak about the logic of so called trapped space surfaces around black holes in his Noble speech which is supposed to be the same as the light horizon in Q-FFF Theory. (Function Follows Form of real strings)

New Physics:

1 The lightspeed is variable and stabilized by massive objects like the Sun and Planets influencing the vacuum which seems to be an oscillating Axion strings between variable Planck spaced nodes with tetrahedral lattice structure. The LIGO speed of black hole merger signals are dependant of the local (galaxy) vacuum stability and local mass influences. As a consequence there are three kinds of gravity:

a: Pushing gravitons with the speed of light created by vacuum particle transformation by mass.

b: The instant gravity speed by local pressure of the oscillating vacuum (**Tom van Flandern**)

c,: The merger lightspeed gravity waves found by LIGO by local Planck length variation of the vacuum lattices , see: [THIS](#)

2: The vacuum has frontal resistance acceleration at the backside of each spinning Fermion, which is the origin of the speed and contraction of all masses (**John S Bell**)

3: Black holes attract everything, but repel mass outside the **Roger**

Penrose "trapped Horizon"

where they create new Fermions. plasma, dust and ice like Comets do, out of the vacuum by Axion string transformation..

4: Sunspots are crashed Comets, which represent interference micro Black holes creating plasma and often an ice crust, like Sprites or large Ball lightnings wich are accelerated by a pushing plasma tails.

5: Consciousness (see Veto Free Will of **Benjamin Libets** RPI and RPII) is created by the semi- instant entangled mirror universes with 8 or 12 mirro symmstric by entangled (see: **John Cramers TI**: Transactional Interpretation) bubbles in Rasperry form, which seems also responsible for Uncertainty and Inertia of **Lorentz** polarized propellor shaped Fermion masses.

6: Equal sized black holes (Super Nova- or small Interference black holes) do not merge but form Herbig Haro systems with often two plasma jets around the center which later can form a central black hole.

7: Magnetism and Electricity are each based on the cooperation of two monopole photon strings.

for Pigeons, Robins etc etc. to locate on the earth magnetic field.

8: Each black hole has a stabel string knot nucleus and growing in size by the input of vacuum strings. The Ball Lightning has the smallest (unstabel) string knot nucleus.

9: The electron shell around the atom nucleus has the shape of a layered ball with a polar electron as a polar axis.

10: The shape of the Oort cloud and the Kuiper belt packed with comets and asteroids is influenced by the SABHs (dual Stellar Anchor Black Holes) being the remnants of both Herbig Haro black holes forming stars in the middle.

Free Energy from the vacuum between two new physics black holes is already found in Herbig Haro systems and around all stars called Birkeland Currents.

Based on the new dual string knot black hole interpretation of Q-FFF Theory, It is a logic proposal that future Herbig Haro micro ball lightning black hole systems will produce most of our need for electric energy.

In contrast with the evaporating black hole suggested by S. Hawking, all Black Holes grow, only by eating other black holes, vacuum particles (dubbed Axion-Higgs), all radiation and Neutrinos. However, BHs, do NOT eat Fermions.

The smallest BHs (Ball Lightning) are unstable, but need radiation support to stay stable.

Large (M87) black holes are observed with rings of plasma which is not eaten by the black hole, but distributed as Fermi bubbles perpendicular to the plane of the Galaxy.

However equal sized black holes do repel each other, often leaving a plasma bar in between, as the start of a celestial object. Like a star later a Galaxy or failed star dependent of the scale of the Herbig haro system.

Introduction.

In Quantum FFF Theory, Fermions are supposed to be small rigid transformer strings with a propeller shape, able to become compound particles with photons, to form Quarks.

Different elementary particles have different qualities by their different complex stringy shape. Leptons and Quarks have a propeller shape with left or right handed pitch creating charge difference. Gluons, Photons and Neutrino particles have no comparable pitch.

The rigid FORM and Microstructure of elementary particles (rigid strings), is supposed to be the origin of functional differences between Higgs- Graviton- Photon- and Fermion particles. As a consequence, a new splitting, accelerating and pairing new paradigm Dark Matter Black Hole, (DMBH) seem to be able to convert vacuum particle energy (ZPE) into real plasma which could explain quick Galaxy- and Star formation, by so called Galaxy- or Stellar Anchor Black Holes (GABHs respectively SABHs).

These Anchor Black Holes can be observed as Herbig Haro (HH) Hotspots or Bowshocks. Recent observation of two High Energy Cosmic Ray Hotspots, (HECRHs) at solar polar locations, (Big Dipper and Southern cross) is reason to assume in accord with new physics of Quantum FFF Theory, that these hotspots represents the locations of our Solar Anchor Black Hole (the North-and South SABHs).

At the same time in the Quantum FFF model, it is proposed that early Galaxies also are created by dual black hole (HH) systems being former Big Bang black hole splintered primordial dark matter black holes.

They will be called Galaxy Anchor Black Holes (GABHs)

As a consequence, the standard Hot Big Bang with Hot plasma and Hydrogen as the base for everything has to be rejected.

Recent observation of a faint galaxy without a dark matter content (NGC 1052 DF2) seems to be created by the star forming capacity even by triple pairing dark matter black hole nuclei, located in the center of the surrounding globular star clusters assumed to have a triangular topology.

New Herbig Haro Physics is supposed to be obtained by the architecture of Quantum FFF (Function Follows Form) Theory.

Could we live in a rigid string based entangled symmetrical multiverse?

Characteristics:

1: The clear MICROSTRUCTURE or the 3D FORM of rigid elementary particles, (also called 3DPreons) made out of convertible Higgs particles, is responsible for “Bound states of Fermions” and composite Quarks.

2: A massless Axion Higgs particle is supposed to be energetic oscillating, it is the origin all particle motion and spin states and Dark energy inside a truncated tetrahedron shaped chiral vacuum lattice. The lattice chirality (left or right handed) is the origin of our material universe.

Axion-Higgs particles are zero point “Planck Oscillators” the origin of the Casimir force, waiting to be harnessed as free energy.

3: Nothing sucks in physics, Gravitons act with less pressure on Fermions than the Axion Higgs vacuum (dark energy) and everything is entangled by instant communication between at least two anti-copy universe or Raspberry multiverse, being entangled since the big bang. 4: Black holes of all sizes (down to interference black holes like ball lightning) do not emit gravitons, they feel only Casimir Gravity of the vacuum oscillations so they are massless but counter intuitively the origin of dark matter and producers of all Hydrogen by electron and Positron pairs as horizon fluctuations and repel all Fermionic plasma at the BH horizon accelerated by the negative charged electron shell around each black hole..

5: The Multiverse is Pulsating by two phenomena,

A; vacuum (Higgs) eating new paradigm dark matter black holes (causing the Hubble redshift)

B: by universal expansion caused by the oscillation vacuum force (Dark energy) of the Axion Higgs vacuum lattice.

FUNCTION FOLLOWS FORM in Quantum FFF-Theory. The Microstructure of elementary particles, is supposed to be the origin of functional differences between Higgs- Photon- and propeller shaped Fermion particles.

Something small is missing in mainstream physics: a NEW splitting and pairing

Massless black hole, the origin of all dark matter, Ball Lightning Micro Comets , Comets, Sunspots up to Galaxy external Anchor Black Holes and the Big Crunch of the CP symmetric pulsating raspberry shaped multiverse.

The multiverse can be compared with a huge pinball machine, with dark energy in the form of linear oscillating double Higgs pins as the origin of photonic collision products with the propeller shaped Fermions as balls. All forces are the result of this entangled Pin-Ball interaction.

The 125GeV Higgs Boson recently found in the LHC is assumed to be not a single but a threefold knot of monopole magnetic particles (North or South).

The 125GeV energy is the base for universal dark energy, the frequency is the base for local time and the length a base for the Planck scale. (Twin Higgs, Dual Higgs, Duplex Higgs, or Tandem Higgs)

As a result, an unstable Higgs vacuum seems to be present around all black hole horizons due to observed H₂ plasma production and annihilation radiation created by pair production of positrons and electrons. (Instability of the Higgs field)

The Lyman alpha Structure of the universe seems to be the result of the H₂ production and black hole splitting process, which seems to be supported by the recently observed huge Quasar Groups found by R.Clowes, et al. (Ref: 96) and the recent UHECR (Ultra High Energetic Cosmic Rays) observations from the Pierre Auger Observatory.(Ref. 97.)

Consequently this seems to be a new support to consider new astrophysical models such an alternative Big Bang black hole splitting process.

Quantum FFF Physics.

Quantum FFF theory states, that the vacuum is seeded with fast oscillating massless AxionHiggs particles, oscillating along a complex chiral tetrahedral vacuum lattice, which has the ability to transfer Photon and Graviton FORM information in bunches of oscillations, through the vacuum lattice with the local speed of light. As a consequence there are no attraction forces on propeller shaped Fermions. Gravity seems to be the result of two different

impulse arrays: the massless Axion-Higgs impulse array and the opposing (less effective) massless Graviton impulse array.

As a consequence Black holes suffer only Higgs impulses and NO gravitons are escaping because the nucleus of the black hole is supposed to be a super dense knot of real rigid Axion Higgs particles. Only the statistical sum of the different kinds of vacuum impulses from all directions on Fermions are responsible for all (energetic) phenomena in the universe. The accelerating plasma tail of NEW paradigm black holes, and the splitting black holes by smaller pairing black holes is supposed to be the origin of a smooth proliferation of black holes in the universe. The Eagle Spire Nebula, (fig. 7) the Carina and other nebulas, are examples of a smooth proliferation of black holes through Galaxies and Nebula. What we can observe in these nebulas is the pairing and splitting of black holes ending up into multiple Herbig Haro objects as the origin of new stars as the start of small open star clusters..

Our sun is supposed to be also a remnant of a former open star cluster located in between two Stellar Anchor black holes, representing the so called hotspots of a former Herbig Haro object. (figure 1 and 3)

The solar planetary system and planets are supposed to be expelled from the ever growing Sun by instable stellar rotation effects.

As a result we may discriminate two different kinds of stars:

Stars accompanied by two or even more Stellar Anchor Black holes (SABHs) and stars that are not.

As a result we may observe clear differences in the way stars form planetary nebula at the end of their life.

There are Planetary Nebula's (PNs) with and without clear hotspots located on both sides of the symmetrical exploded gas distribution.

Next pages should give visual support for these statements.

Possible dising of a micro electric Birkeland current production device for free energy.

The Trapped vacuum surface is supposed to be a real vacuum string collider creating pairs of fermions.

A brief definition of the Quantum FFF Theory or TOE.

(Function Follows Form of real primordial strings)

1: There seem to be TWO different black holes,

a: small interference black holes (sunspots comets and even ball lightning)

b: supernova black holes by implosion of stars, growing larger BHs after merging (up to the big Crunch).

2: Fermions seem to have a propeller shape with left or right pitch for different charge and spin.

3: Magnetic- and electric fields seem to include monopole particles (respectively North South, or plus and minus)

4: Fermions produce monopole photons by collision of oscillating vacuum particle.

5: Each string has at least one symmetric particle connected by long distance wormholes (ER+EPR) to form the mirror symmetric raspberry shaped multiverse.

6: Both Black Holes repel fermions and create fermion pairs by vacuum collisions at their light horizon.

see: <https://bigbang-entanglement.blogspot.com/>

Hairy Gravity around planets and stars, by the internal dark matter black hole based crashed comets, with P-Wave ellipse. according to Q-FFF Theory.

According to the Quantum-FFF model, (Function Follows Form) Microscopic Dark Matter (singularity black holes) are proliferated inside stars (sunspots), comets and ball lightning. Recent study (B. Harris) suggest, that also around earth an equatorial dark matter ring is present as the origin of the "Flyby anomaly". However a DM equatorial disc located inside the earth (like sunspots) could solve the Flyby anomaly better and perhaps even the so called P-Wave shadow zone.

Figure 1,

Fermion Propeller Creation and Repulsion by the Trapped Space Surface.

Figure 2.

Ejected interference Starspot black holes of equal size form small Herbig Haro systems

Multiple Horizons created around Supernova Black Holes.

Proposal for the relation between different S-Nova shapes and the external primordial black hole configuration called Herbig Haro hotspot or Stellar Anchor Black Holes (SABHs)

Different Super Nova shapes are created around two star types:
 A: Stars with distant "dual or quadrupole Stellar Anchor Black Holes" assumed to be located in the center of a former open star cluster. (SN1987, NGC2440, Crab Nebula)
 B: stars without SABHs. (SN1572) Our sun is equipped with two sunspot rings assumed to be of type A, with two SABHs, according to Quantum Function Follows Form Theory.

Figure 3.

LIGO based Black Hole ratios and the ability to merge or split into two equal BH parts, able to create Herbig Haro systems and Gamma Ray Bursts. Such splitting systems are observed in the so called Spire part of the Eagle nebula.

The origin of Gamma Ray Bursts, by splitting black holes of different size, leaving three BHs behind. Two of them could form a Herbig Haro Object with a dumbbell structure. (Quantum FFF theory@Leo Vuyk).

Dual black hole merger nominal mass contents observed by LIGO in 2015 and 2016 resp. 29/36x and 7.5/14.2x sun masses. see: Quantum FFF Theory. The related ratios are: 1/1.24 resp. 1/1.9.

Example: the Eagle nebula splitting

$1.0 // 1.24 - 1.9?$

2 LIGO ratios: 29-36/7,5-14.2sun = 1.0/1.24/1.9

$1.0 // 1.0$

Herbig Haro creation ratio: 1x

BH splitting ratio $1.0 \gg 1.9 - ? - 50.0?$

$1.0 // > 50.0?$

Small black holes should split larger BHs into two equal parts to create dual Herbig Haro hotspots also called bowshocks or accretion outburst sources.

Galaxy central BH merger: $1.0 // > 50.0?$

Black hole splitting in the Spire Eagle nebula

According to the Quantum Function Follows Form Model, small black holes split larger BHs in equal halves, (A) which are able to repel each other and form Dumbbell shaped Herbig Haro systems (B,C) with star formation in between.

At location (A) both unequal sized black holes seem to split into 4x dual sets of smaller BHs one dual set has even evolved into a second 4x dual sets of BHs.

Figure 5,

New support for a Fermion Repelling Black Hole. (Q-FFF Theory.)

Meerkat observation of the Milky Way Center.

According to Quantum FFF Theory, The central giant MW-Black Hole only eat dual systems of smaller black holes, also called Herbig Haro systems. HH systems create plasma jets in between which seem to stay put (see: streaks) after both HH black holes are eaten by the central BH. The image (by MEERKAT) does already show some dual grouping HH systems without intermediate jets.

Evidence for a Fermion Repelling New Physics Black Hole inside Herbig Haro (HH34) Bowshock ! Outflow Velocity differences between the leading black hole and the secondary Fermion plasma hotspots are the indication, according to Q-FFF Theory.

The black hole (O) has the smallest relative velocity. Conclusion: Secondary Fermionic plasma hotspots are repelled ! As predicted!

Figure 6,

Equivalence between gravity and acceleration does not hold in Quantum FFF Theory. Mass in motion needs a reference frame of ZPE oscillating Higgs field and Lorentz polarization of conscious propeller Fermions (s) to keep a non accelerated flight.

Quantum Gravity as pressure distribution of the oscillating dual Higgs/Graviton vector field.

Polarized Fermion Mass in motion through the resistive, but also pushing oscillating Higgs vacuum (according to Quantum FFF theory)

Cross section through the dual Higgs/ Graviton 3D vector field pressure distribution (or globular Hedgehog) on a point mass (1) located on earth's surface (2), according to Quantum FFF theory. 3+4= Higgs vector field. 6= Graviton vector field originated by the Higgs-graviton field transformation of the earth itself. 7+8= differences with a perfect globular vector distribution. Field variables 3+6 are rendered as inverted arrows. (see also black hole pressure distribution without gravitons)

Figure 26, Dual Quasar/ Galaxy and Cluster forming relation in the early universe after Dark Matter Black Hole nuclear Big Bang splitting.

Fermion/ Dust production and repulsion at small (Herbig Haro) black hole horizons during and after fractal inflation.

According to Quantum FFF Theory, there is no fermion information loss, only photonic information loss in a black hole. Quantum fluctuations around the BH horizon produce pairs of leptons. e^- , e^+ and even compound quarks (d,u, etc, see Fermion 3D string propeller theory: Fermion repelling by spin flip). For tripple BH horizons see image nrs 7, 10 and 11. Event horizon=7, Inner photon ring = 10, Outer photon ring = 11. Conclusion The Big Bang did not produce instantly all the Fermions in the universes. Even now lots of Fermions are produced by all BHs even the largest primordial Big bang splinters located outside large galaxies. see also: <<http://vixra.org/abs/1410.0039>

Figure 27, Principle of Fermion repulsion around a black hole according to Quantum FFF theory..

First evidence for a Solar Anchor Black hole: a Cosmic Ray Hotspot

A mysterious source of high energy cosmic rays are found north near the Big Dipper (university of Utah) In addition: the south pole IceCube experiment found concentrated neutrino sources at north and south locations (see upper figure, nrs.23+ 18) Both could represent the Stellar Anchor Black Hole (SABH) locations of the sun, according to Q-FFF theory.

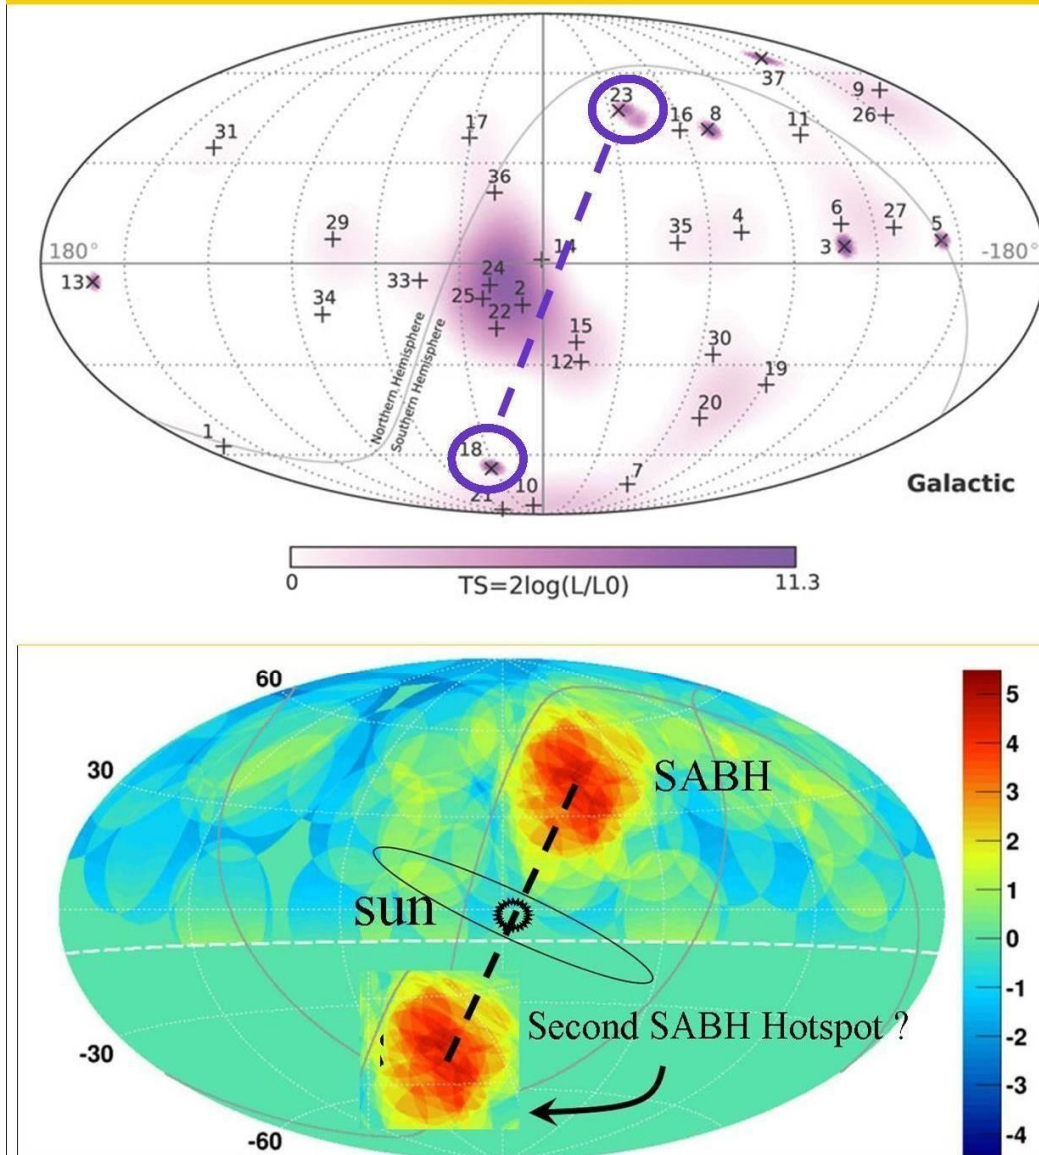

Figure: 28, 9-july 2014. first evidence for the first Solar Anchor Black Hole. (SABH) A hotspot with powerful cosmic rays found under the Big Dipper, by the University of Utah. 'Black Hole Splitting for (TDRG)' J1216+0709

Black hole splitting as the origin of spiral Galaxies after a double or multiple lobed Quasar process.

Triple-Double Radio Galaxy (TDRG) J1216+0709

In Quantum FFF theory, stars and galaxies need at least two new physics Electric Dark Matter Black Holes (EDMBHs) for a Herbig Haro system (or dual lobed Quasar). However multiple symmetric lobed systems seem also possible by a repeated central black hole splitting process.

LIGO based Black Hole ratios and the ability to merge or split into two equal BH parts, able to create Herbig Haro systems and Gamma Ray Bursts. Such splitting systems are observed in the so called Spire part of the Eagle nebula.

The origin of Gamma Ray Bursts, by splitting black holes of different size, leaving three BHs behind. Two of them could form a Herbig Haro Object with a dumbbell structure. (Quantum FFF theory @ Leo Vuyk).

Example: the Eagle nebula splitting

Small black holes should split larger BHs into two equal parts to create dual Herbig Haro hotspots also called Herbig Haro or accretion outburst sources.

Galaxy central BH Merger: 1.0 // >= 50.0?

<http://vixra.org/pdf/1306.0218v1.pdf>

Figure 39, Rigid string topology with sub quantum structure able to make quantum knots of different masses and functions.

Three or more Higgs models in a 3D Rigid String System.

In 1012 the Atlas particle smasher in LHC found two distinct possible Higgs masses around 125GeV.: 123.5 and 126 GeV. Later a bump was found around 375 GeV. Here I present 3D suggestions for such bumps in a Rigid String based Quantum FFF model.

The New Standard Model of Quantum FFF Theory, with Transformer Toroid Axion Higgs, (*AxHi*) as the zero mass Virgin String particle.

Three different shaped Composite Higgs Particles seem to be possible at least: 123.5/ 126 (Mirror Symmetric), and 375 GeV.

Figure 40, Three or more Higgs models in a 3D Rigid String system.

Non Inertial Gravitating Dark Matter Black holes.

According to Quantum FFF Theory, stable Black Holes are growing by "eating" the gravitating (Casimir) pressure vacuum without the standard gravity related inertial effects, the result is that 1: Small BHs seem to concentrate around the central giant Galaxy BH . 2: Galaxy cluster mergers like Abell 520 overshoot and leaving behind their own Dark Matter content.

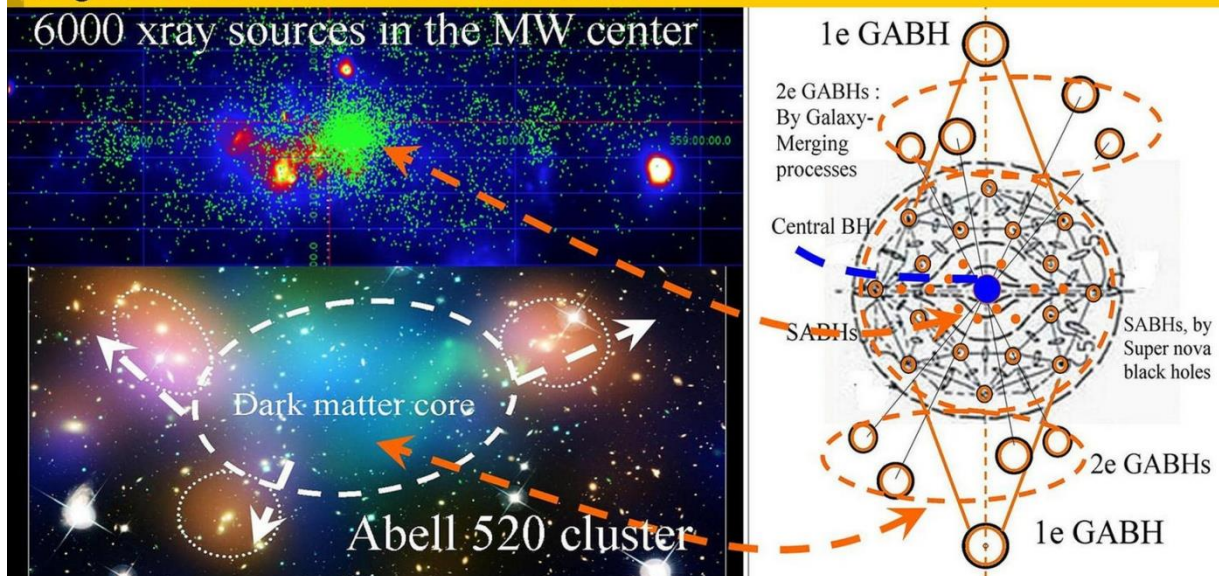

Figure 41, Non inertial Gravitating Dark Matter Black Holes and some specific astrophysical effects.

Suggestion for the origin of UFO dust particles inside the LHC at CERN: particle based Quantum Knot heating according to Quantum FFF theory.

Comparison of UFO dust particles diam. 10 μm at CERN (left) inside ceramic tubes and on Silicon discharge globules in the lab. 100 μm (Right)

Multiple Horizons created around Supernova Black Holes.

Proposal for the relation between different S-Nova shapes and the external primordial black hole configuration called Herbig Haro hotspot or Stellar Anchor Black Holes (SABHs)

Different Super Nova shapes are created around two star types:
 A: Stars with distant "dual or quadrupole Stellar Anchor Black Holes" assumed to be located in the center of a former open star cluster. (SN1987, NGC2440, Crab Nebula)
 B: stars without SABHs. (SN1572) Our sun is equipped with two sunspot rings assumed to be of type A, with two SABHs, according to Quantum Function Follows Form Theory.

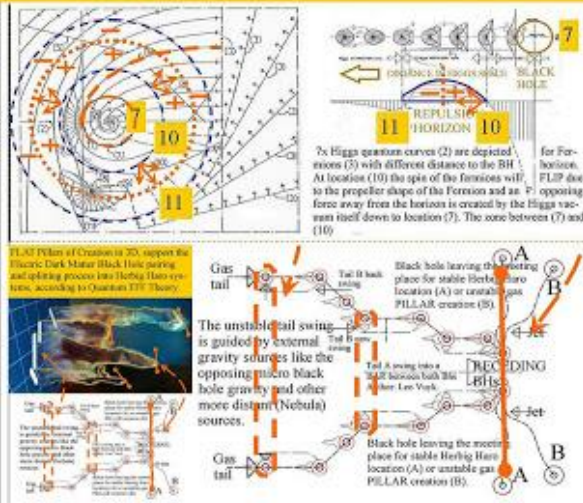

Figure 43, Super Nova Starspot Black Holes forming small Herbig Haro systems.

LIGO based Black Hole ratios and the ability to merge or split into two equal BH parts, able to create Herbig Haro systems and Gamma Ray Bursts. Such splitting systems are observed in the so called Spire part of the Eagle nebula.

The origin of Gamma Ray Bursts, by splitting black holes of different size, leaving three BHs behind. Two of them could form a Herbig Haro Object with a dumbbell structure. (Quantum FFF theory@Leo Vuyk).

Dual black hole merger nominal mass contents observed by LIGO in 2015 and 2016 resp. 29/36x and 7.5/14.2x sun masses. see: Quantum FFF Theory. The related ratios are: 1/1.24 resp. 1/1.9.

Small black holes should split larger BHs into two equal parts to create dual Herbig Haro hotspots also called bowshocks or accretion outburst sources.

Galaxy central BH Merger: 1.0 //>50.0?

Figure 44, Black Hole Ratios with absorbing consequences.

Tripple Black Hole horizons found by NASA in accordance with Quantum FFF theory..

- 1: Non rotating Black hole nucleus (in 2D cross section).
- 2: Reference axis for trajectories 4,5 and 6.
- 3: Other incoming photonic/Higgs fronts (without depicted trajectories)
- 7: High photon energy collider globular shell, with intense Quantum effects like pair production (e^-e^+). 8: test masses.
- 9: Butterfly shaped Higgs/photon Fermion pushing curves in 2D.
- 10 and 11: Fermion repulsion zone. Due to the propeller shape of the Fermions, they will experience a so called "Spin Flip" in this zone.

Figure 45, Different horizons around the Black Hole.

The New Black Hole according to the Quantum-FFF Model: Negative Charged (outside) and Fermion (Plasma) Creation out of the massless Axion-Higgs String vacuum. (Fermion repulsion).

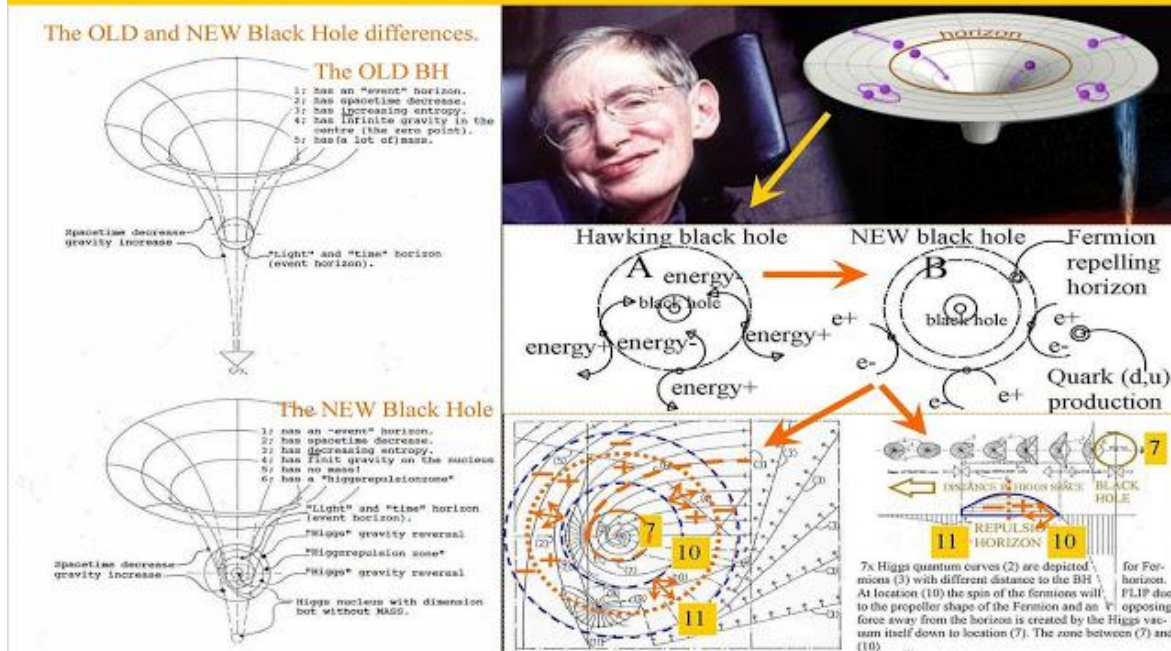

Figure 46, Negative charged Black hole at the outside, positive at the inside originated by the chiral vacuum.

Examples of Magnetic Monopole Condensations (Rigid Strings) leading to variable Higgs masses, Erebons and Micro Black Holes.

Composite rigid transformable string models based on 3x internal-90 degr. step rotation of the Axion-Higgs Torus made of primordial matter.

Geometrical proposal for the sub-quantum structure of 6 Leptons and Quarks interpreted as compound Photon/Electron Positron propeller combinations. Muon- and Tau particles seem to show up as family members of the Down respectively Charm Quarks

The basic rigid transformable Axion string Torus with aspect ratio (=7) and 1x splitting and 3x hinges made of primordial matter, according to Quantum FFF Theory.

All Photons (1x graviton, 2x electric, 2x magnetic and 1x general x-gamma-ray photon) and two Fermions, are transformed direct out of the massless Axion/Higgs ring, by internal hinge rotation over 90 degree steps. Electric Dark Matter Black Holes (EDMBHs) or EREBONS (Penrose) are formed by 3 or 4 photon knots (ball lightning). Neutrinos are single transformed photons or fermions.

Rigid String Quantum (3 or 4x) Ring Knots, adding up to higher mass unstable micro quantum black hole nuclei.

Rigid String Quantum Knot suggestions for different configuration: 125-375-500-750-1600 GeV and More called dark matter black holes (According to Quantum FFF Theory architecture)

Some suggested ring configurations

Some other combinations

Figure 47, examples of rigid string vased monopole particles.

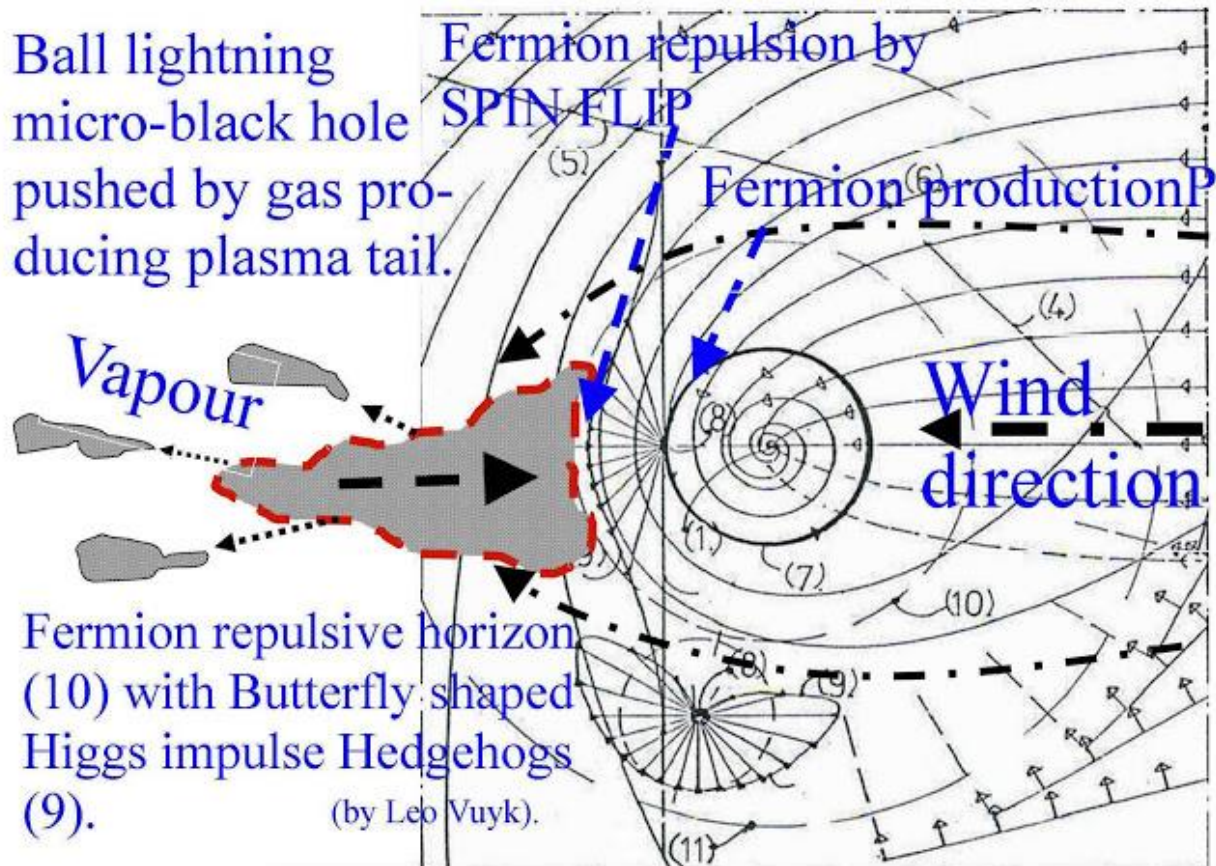

Figure 48, Details of vacuum synchrotron motion around a black hole with plasma creation and tail.

In Addition.

According to Quantum FFF Theory, (Function Follows Form) the FORM and microstructure of elementary particles, is supposed to be the origin of FUNCTIONAL differences between HiggsGraviton- Photon- and Fermion particles.

As a result, a NEW paradigm of splitting-,accelerating- and pairing Black Hole seems to be able to accelerate itself by a -Zero Point Energy driven-self created plasma tails (by a new Quantum Fluctuation process), to form dumbbell systems, of two or even more black holes.

Inside Nebula these dumbbell systems are called Herbig Haro systems.

I think that Stephen Hawking did not calculate with the possibility of a chiral oscillating Higgs field vacuum lattice combined with propeller shaped Fermions. Then, due to Vacuum Chirality, Electron- and Positron propellers could both pushed away from the BH horizon after spin flip polarization at different distances, forming two charged separated spheres.

With quark (plasma) formation in between.

Based on such a simple object (propeller and process) oriented ontology, Black Holes could be imagined as charge splitters violating the 2e law af thermodynamics, combined with a continuous microscopic big bang plasma creation process!

The result I try to describe :

1: Black holes are the same as Dark Matter, they all consume photons, even gravitons and the Higgs field, but REPEL Fermions due to their propeller shape. They produce electric charged plasma.

- 2: Dark Energy is the oscillating (Casimir) energy of the Higgs Field equipped with a tetrahedron lattice structure with variable Planck length..
 - 3: Quantum Gravity = Dual Push gravity= Attraction (Higgs-Casimir opposing Graviton push).
 - 4: The Big Bang is a Splitting dark matter Big Bang Black Hole (BBBH), splitting into smaller Primordial Big Bang Spinters (PBBS) forming the Fractal Lyman Alpha forest and evaporating partly into a zero mass energetic oscillating Higgs particle based Higgs field. 5: Dual PBBSs hotspots, produce central plasma concentration in electric Herbig Haro systems as a base for star formation in open star clusters as a start for Spiral Galaxies. 6: Spiral Galaxies will keep both Primordial Dark Matter Black Holes as Galaxy Anchor Black Holes (GABHs) at long distance.
 - 7: After Galaxy Merging, these GABHs are the origin of Galaxy- and Magnetic field complexity and distant dwarf galaxies .
 - 8: Black Holes produce Plasma direct out of the Higgs field because two Higgs particles are convertible into symmetric electron and positron (or even dual quark-) propellers (by BH horizon fluctuations).
 - 9: The chirality of the (spiraling) vacuum lattice is the origin our material universe. (propeller shaped positrons merge preferentially first with gluons to form (u) Quarks to form Hydrogen.
 - 10: The first Supernovas produce medium sized Black Holes as the base for secondary Herbig Haro systems and open star clusters.
 - 11: ALL Dark Matter Black Holes are supposed to be charge separators with internal positive charge and an external globular shell of negative charged Quark electron plasma.
 - 12: The lightspeed is related to gravity fields like the earth with long extinction distances to adapt with the solar gravity field.
 13. Quantum FFF Theory states that the raspberry shaped multiverse is symmetric and instant entangled down to the smallest quantum level. Also down to living and dying CATS in BOXES.
 - 14 Large Primordial Big Bang Spinters (PBBS) are responsible for the creation of the Lyman Alpha forest structure and first spiral galaxy forming of the universe, but they seem to be also responsible for the implosion of the universe at the end in the form of Galaxy Anchor Black Holes (GABHs) located mainly outside galaxies. see: (Quasisoft Chandra sources) 15, As a consequence of 12-14, Time is always local time in combination with cyclic period time of the multiverse.
 - 16, If our material universes has a chiral left handed oscillating Higgs field, then our material Right Handed DNA helix molecule could be explained. However it also suggests that in our opposing symmetric anti-material entangled neighbor universe the DNA helix should have a Left handed spiral.
- According to Max Tegmark: in an entangled multiverse we may ask: is there COPY PERSON over there, who is reading the same lines as I do? If this copy person is indeed living over there, then even our consciousness should be shared in a sort of entangled democratic form. Then we are not alone with our thoughts and doubts, see: Democratic Free Will in the instant Entangled Multiverse.
- 17, All particles and waves should be entangled with anti-copy particles and Higgs field based waves in our opposing anti universes. Then wave particle duality and the so called one particle double slit interference could be explained by accepting that real shaped 3D photon particles only exist in their function of Gluons. However Gluons should transfer form information to

the oscillating luminiferous Higgs field ether, within about 1 cm distance from a fermion.(see: Babcock and Bergman anomaly,1964)

18, Different elementary particles have different qualities by their different complex stringy shape. Leptons and Quarks have a propeller shape with left or right handed pitch creating charge difference. Gluons, Photons and Neutrino particles have no pitch.

20 All particles can be converted to one or more Higgs particles, Lepto Quarks can be compound particles.

21 All particles are assumed to be present as Higgs particles already in the cyclic Big Bang Black Hole (BBBH) after the former multiverse has collapsed into a Big Crunch Black Hole.

22, We seem to live inside one material universal bubble of an instant entangled (Charge Parity Time) CPT symmetric raspberry bubble multiverse. Each quantum jump or wave function collapse or human choice is guided by this instant entanglement at long distant. If our material universes has a chiral oscillating Higgs field, then our material Right Handed DNA helix molecule could be explained. However it also suggests that in our opposing Anti materialmultiverse neighbour universe the DNA helix should have a left handed spiral.

According to Max Tegmark: in an entangled multiverse we may ask: is

There copy pesron over there, who is reading the same lines as I do? If this copy person is indeed living over there, then even our consciousness should be shared in a sort of democratic form,

Leo Vuyk, (an architect/ building engineer) started this model in 1980, by making measurements of the Earth magnetic field with only the help of a simple compass and a mu-metal jar (page: 18-19 and app.p.5)

What he discovered was a clear measurable distinction between North-and South magnetic radiation and at the same time a new particle-wave interpretation of the (Earth) magnetic field. He boldly concluded that there was reason to "construct" an adapted "standard model" of elementary particles. Two Vacuum (Higgs-virgin) particles could change by mutual collision into an electron and a positron. One vacuum particle could change by collision with leptons or quarks into a variety of 6 different photons: magnetic photons (North or South), electric photons (plus or minus), a "general" photon or a graviton. With an exception for the graviton these photons can merge (or click) together with an electron or positron to form quarks and at the same time they represent the $8 + 1$ gluon functions ($4 \times 2 + 1$). As a result, the so called "preons" invented by Salam 26 years ago, as the sub-particle components of quarks, come in this case in 7 varieties ($2 + 4 + 1$).

Photons pop into existence after collision of Higgs-virgin particles with leptons and quarks and after travelling a distance with the "source referred speed of light" (roughly spoken) 3 cm they pop back into a Higgs-virgin particle and become a wave, which has the light speed of the "local vacuum reference frame".(app.p.28) This transition after 3 cm, which we will call: the "photon transition" is the explanation for wave-particle duality and a part of the explanation for the fact that no variations of the speed of light are showing up in the measurements.

The photon information is conserved through a wavefunction, expanding with a "Local Higgs virgin vacuum" referred speed of light which must be interpreted as an additional oscillation, added to the local fabric of oscillating Higgs-virgin particles. This means, that the "real" velocity of Higgs-virgin particles on the "Planck scale" has to be varying by these oscillations, so does the velocity of light ("tunneling" effects). On average however on the scale of our measurements, the velocity of light is constant. The wave function collapses again by changing a local Higgs-virgin particle into the original "hard rock" photon. This "photon transition" system give us the ILLUSION of photons and Higgs virgin particles which are "CRUISING" AS PARTICLES through space. In the next paper the

term CRUISING is frequently used.

The local oscillating "Higgs-virgin vacuum" around the Sun originates a local vacuum frame, which is centered around the Sun and is anchored by at least two "anchor Black Holes" in "dumbbell form": each located at one side of the planetary plane. This gave the explanation for "non-Newtonian gravity" measured by " the Pioneer and Ulysses (app.p. 34)). It could be possible to locate these "anchor Black Holes" by telescope from the Earth. The relative circular change of the Black Hole position, should incidentally originate a "microlensing effect" on the the background stars.

This photon transition system should be the explanation of wave ad <http://www.wehope.com/Pages/a006.html> (8 of 10)3/7/2005 12:44:37 PM www.wehope.com/a006.html

particle duality and the "null result" of experiments, like the well known stellar aberration experiment with the water filled telescope of sir G.Airy in 1871: In water, the photon is not able to "transform" into the wavefunction due to the molecule density of the water. Consequently the water has its own reference frame, which is originating the "Fresnel drag", for water proved through experiment by H.L.Fizeau in 1851.

At the same time this photon transition system was Leo's clue to explain relativity in an ontological way, and at the same time, in agreement with the "Bell interpretation" of relativity. To speak with John Bell's words: "As with relativity before Einstein, there is then a preferred frame in the formulation of the theory... but it seems experimentally indistinguishable. It seems an eccentric way to make a world" (J.S. Bell: "Speakable and unspeakable in QM", p.180). Fortunately Leo suggested two tests: using a part of the 24 hours variation of cycle-synchrotron radiation (2:test: page .12) and an alternative for "John Bell's spaceship experiment" to prove the "real contraction of rods" (see app.p 34).

Together with the particle model in hand, he couldn't withstand the temptation to go further and he found answers and parallel ideas in some already existing mostly "dissident" theories in physics and astronomy.

As there are: John Bell (CERN Geneva, app.p.10 and 34): Dissident interpretation of Special Relativity ("contraction of rods") David Bohm: (app.p.1-2 and 11) sub-quantum level structure of particles and pilot wave theory. Halton Arp: (p.16 , app.p.18) migrating quasars out of Galaxies. Rupert Sheldrake: pigeon homing skills and pet behavior: (app.p. 26-32). Abdus Salam: sub-quantum level structure of elementary particles, known as "preons". H.B.G. Casimir and H.E. Puthoff: Zero Point Energy, Alan Guth: Inflation. Together with his particle model, this turned the Universe on its head and gave to his surprise interesting answers to unresolved

questions like: Wave or particle: Wave AND 3-Dimensional particle!!! Particles are "guided" by Big Bang-entanglement, "pushed around" by the energetic Higgs-virgin vacuum particles, which originate: "matter waves". This is supplemented with "Big Bangentangled" pop-up photons triggered by the collapse of the "wavefunction" (This had an interesting resemblance with the theory of David Bohm, see Basil Hiley: app.p.11).

These answers originated Leo's suggestions for the "Graviton-Higgs combined pressure gravity" (page 6-10). Alternative Feynman diagrams (app. p. 13). The "Mass-less-repulsive Black Hole"(p.9 and 21). The "Higgs-virgin" particle behavior. The "Zero Point Energy" ZPE- propulsion of the mass-less Black Hole (quasars and ball-lightning, p.21-25). The Galaxy-type relation with "anchor Black Hole" configurations (p.26). Restoration of Universal symmetry by introducing an extra synchronized anti-mirror Universe, with the need for an instantaneous "Big Bang entanglement" relation on all scales between these dual Universes. This formed a base to explain interference, inertia and other phenomena (app.p 29). Free will should be connected to my personal anti-mirror (dual) individual over there!!, (app. p. 27-33). The "2-stage fractal inflation" could give the explanation for the way matter and anti-matter became separated in two Big Bang entangled Universes and for the so called "sheet /finger like" concentration/distribution of matter in the Universe: the "Lyman Alpha Forest"(app.p.40-41)

Leo started after his discovery, with a lot of intuition and a subjective believe in a hypothesis: "The sub-quantum level 3-dimensional structure of particles" and by accumulation of facts (Physical by his measurements and Astronomical by clear alternative interpretations) he was able to emerge more objectivity in his hypothesis.

Consciousness, Chance and Free Will to run this world, seems dubious, but is causal and at least challenging (app. p. 33). Challenging because the two main Quantum Mechanical Paradoxes can be explained and put to the test. The "double slit experiment" by the "consciousness complexity grade" of the "macroscopic" detector (app.p. 31-32). The up- or down state "knowledge in advance" in the "Stern-Gerlach" experiment, by the Big Bang entanglement acting between Universes (app.p.42).

Most physicists believe that there is no reason why consciousness should play a role in physics.

Here the causal answer is presented, that consciousness should play a KEY role in physics. The quantum vacuum is "pushing" the electron around, but the Big Bang-entanglement (Big Bangconsciousness) is

"guiding" and correlating the electron to its "dual anti-mirror counterpart" in the opposite synchronized "anti-mirror Universe". That also humans, birds, flowers and rocks, should be Big Bang-entangled in this way, sounds weird but is the inevitable awful conclusion of this model! The singular private SELF (R. Descartes) is an illusion and has to be replaced by the multiple Big Bang entangled SELF! (app.p.33)

Is this model pointing into the direction of a "Theory of everything"? I think it is a good start!

So, I would wish that also the leading professionals would find new creative horizons in this model.

ATTENTION: The following description of the model, is presented in the time-sequential uncorrected form, which means that early ideas of particle-wave duality and "cruising" (instead of "oscillating") Higgs particles which were described in the beginning (1996-1999) are printed in the uncorrected form.

Arnold Brandon, Amsterdam: 2-29-2000.
